BAKENYE UNITY AND DEVELOPMENT SACCO

Together We Grow, Prosper and Build

STAFF & ADMINISTRATOR MANUAL

Digital SACCO Management System

Version: 2.0

Prepared for: Authorised Staff and Administrators

Date: 25 September 2026

Document control

Item	Detail
Document title	Bakenye SACCO Staff & Administrator Manual
Version	2.0
Publication date	25 September 2026
Intended audience	Authorised staff of Bakenye Unity and Development SACCO: cashiers, loan officers, field officers, accountants, managers and administrators
Purpose	To set out how authorised staff use the SACCO system to keep accurate member, savings, share, loan and financial records, and what each role is permitted to do.
Applies to	The version of the SACCO system carrying the 2026 business-rule change, verified on 25 September 2026. Every workflow in this manual was performed in a test copy of that version before publication.
Classification	Internal. Not for circulation to members or the public.

Revision history

Version	Date	Change	By
1.0	24 September 2026	First issue, following a full review of the working system.	Documentation review
1.1	24 September 2026	Reissued after the defects found by that review were corrected in the system. The savings-reversal and repayment-shortcut warnings and their workarounds were removed, the guarantor and savings screens were re-photographed, and the troubleshooting section now records the two defects as fixed.	Documentation review
2.0	25 September 2026	Reissued for the 2026 business-rule change. The registration fee is UGX 20,000. Monthly savings are open: there are no savings categories, no monthly target and no arrears, so the savings, collection, reporting and registration sections were rewritten and re-photographed. One share costs UGX 10,000 and a member may buy any number of them: the share categories and their deadlines are gone. The Categories screen has been removed from the system, and with it this manual's section on it. Savings waivers were retired: there is no required amount to forgive, and the months already waived are kept in full.	Documentation review

How this manual was prepared

Every screen shown here was photographed from the working application. Every procedure was carried out from beginning to end before it was written down, using a separate test copy of the system containing

invented members and invented money. No member's real information appears anywhere in this manual.

> **What changed in version 1.1**
>
> The review that produced version 1.0 of this manual found two defects in the working system: reversing a savings payment failed, and the amount shortcuts on the repayment screen could enter a figure a hundred times too large. **Both have since been corrected and re-tested**, and the instructions in this edition describe the corrected system. The workarounds printed in version 1.0 are no longer needed.

Your responsibility

The system records what you tell it. It checks what it can — that an amount is a number, that a reference has not been used before, that an account will not go below zero — but it cannot know whether the money in front of you is real, or whether the member you selected is the member who paid. **That part is yours.** Everything you record is recorded in your name, with the date and time, and it stays on the record permanently.

20. Appendix 89

1. Introduction

The Bakenye SACCO system holds the SACCO's financial record. This manual is how that record is kept correctly.

What the system is for

It is a single, permanent record of every member, every payment and every loan. Its value depends entirely on the accuracy of what staff put into it.

Who should read this manual

Role	Which parts matter most
Cashier / Teller	Sections 3, 7, 8, 9, 11, 12, 14 & 18
Field Officer	Sections 3, 7, 8, 9, 14 & 18
Loan Officer	Sections 3, 7, 11, 12, 14 & 18
Accountant	Sections 3, 13, 14, 15 & 18
SACCO Manager	All of it
Admin / Super Admin	All of it, and Sections 16 & 17 in particular

Three principles the system is built on

1. **Nothing is deleted.** A posted transaction cannot be edited or removed by anybody, including an administrator, and the database itself refuses. A mistake is corrected by a *reversal* — a new, opposite entry that names the reason. Both stay visible for good.
2. **Balances are never stored.** A member's savings balance, share value and loan balance are all worked out from the transactions themselves, every time they are shown. There is no separate balance that could drift away from the ledger.
3. **Every money movement is recorded in somebody's name.** Who did it, when, and — where the action is sensitive — why.

What the system cannot do

> **There is no payment-provider connection**
>
> The system is **not** connected to MTN, Airtel, any bank or any other provider. Choosing “Mobile Money” when recording a payment means *this money has already been received and I have checked it*. Nothing in the application confirms a payment that a person has not confirmed. Recording a mobile-money payment without seeing the confirmation message is the single easiest way to put a wrong figure into the SACCO’s books.

Why role-based access matters

Each role can reach only the screens its job needs. This is not about trust; it is about limiting the damage a mistake can do, and making it possible to say afterwards who did what. Never sign in using somebody else's account, and never let somebody use yours.

2. Staff roles and what each may do

Roles are set up in the system, not fixed in the software. A Super Admin can create new ones. What follows is how the SACCO's roles were configured when this manual was written — the live position is always on **Roles & Permissions**.

The roles

Role	Whose job it is	Opens on
Super Admin	The system owner. Always holds every permission, so the SACCO cannot lock itself out.	Administration
Admin	Day-to-day administration, including staff accounts.	Administration
SACCO Manager	Runs the SACCO: members, categories, approvals, settings, reports.	SACCO overview
Loan Officer	Assesses loan applications and collects repayments.	Loans desk
Cashier / Teller	Takes money at the counter and records it.	Cashier desk
Accountant	The books: income, expenses, reconciliation, reports.	Finance
Field Officer	Collections away from the counter.	Collections
Viewer	Read-only access for oversight.	SACCO overview
Member	A member's own portal. Not a staff role.	Member portal

Who may do what

● granted · ○ held by every staff role automatically · — not held

Task	Super Admin	Admin	Manager	Loan Off.	Cashier	Acct.	Field Off.	Viewer
View members, savings, transactions, reports	●	○	○	○	○	○	○	○
Register a member and take the registration fees	●	●	●	—	—	—	—	—
Edit a member's official record	●	●	●	—	—	—	—	—
Change a member's status	●	●	●	—	—	—	—	—
Allow two members to share a phone number	●	●	—	—	—	—	—	—

Task	Super Admin	Admin	Manager	Loan Off.	Cashier	Acct.	Field Off.	Viewer
Collect fees	●	●	●	—	●	—	—	—
Create and edit fees	●	●	●	—	—	—	—	—
Record savings	●	●	●	—	●	—	●	—
View shares	●	●	●	—	●	●	—	●

Approve a loan	●	●	●	—	—	—	—	—
Disburse a loan	●	●	●	—	—	—	—	—
Record a loan repayment	●	●	●	●	●	—	—	—
Manage guarantors	●	●	●	●	—	—	—	—
Reverse a transaction	●	●	●	—	—	—	—	—
Record a deposit or withdrawal	●	●	●	—	●	—	—	—
View Finance	●	●	●	—	●	●	—	—
Record income and expenses	●	●	●	—	●	●	—	—
Approve a transfer, payment or expense	●	●	●	—	—	—	—	—
Reconcile an account	●	●	●	—	—	●	—	—
Set up financial accounts	●	●	●	—	—	—	—	—
Produce member statements and reports	●	●	●	●	—	●	●	—
Manage staff accounts	●	●	—	—	—	—	—	—
Manage roles and permissions	●	—	—	—	—	—	—	—
View the audit log	●	●	●	—	—	●	—	—
View and change settings	●	●	●	—	—	—	—	—

Rules that cannot be switched off

Only a Super Admin may grant *Manage staff accounts* or *Manage roles & permissions*. The Member role can never be given a staff permission. Nobody may edit the role they themselves hold. Every grant and withdrawal is written to the audit log with exactly what changed.

What happens if you open a screen you may not use

The system does not show an error. It quietly returns you to your own dashboard — the navigation menu never showed you the link in the first place. This was tested for every role:

Role	Tried to open	Ended up on
Cashier	/staff/users	Cashier desk
Cashier	/staff/settings	Cashier desk
Loan Officer	/staff/finance	Loans desk
Manager	/staff/users	SACCO overview
Manager	/staff/roles	SACCO overview
Field Officer	/staff/finance	Collections

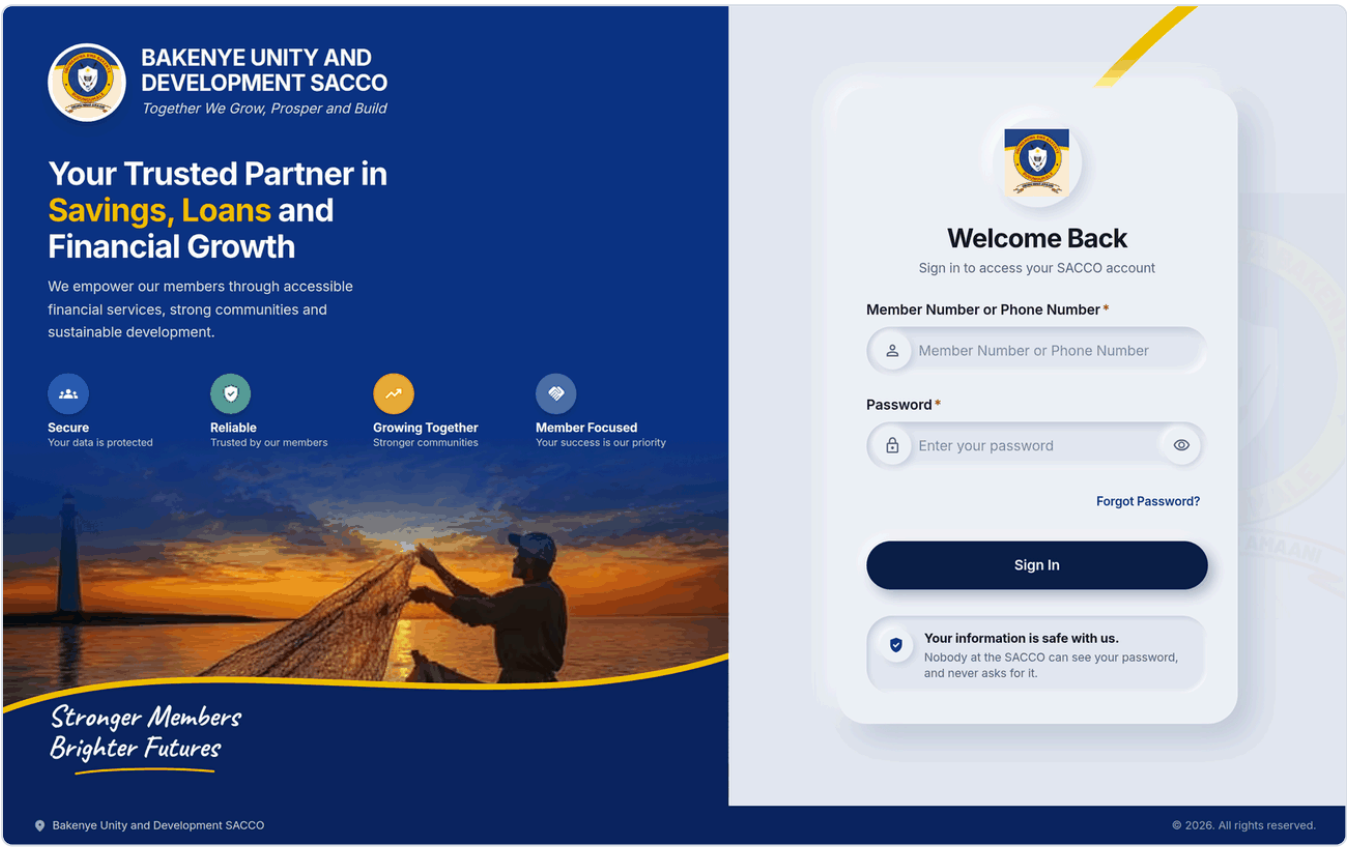

If a screen you genuinely need is not opening for you, it is a permissions question for your manager, not a fault.

3. Signing in, your dashboard, and signing out

There is one sign-in form for everybody. You do not choose "staff"; your account decides where you land.

1 Open the SACCO address and sign in

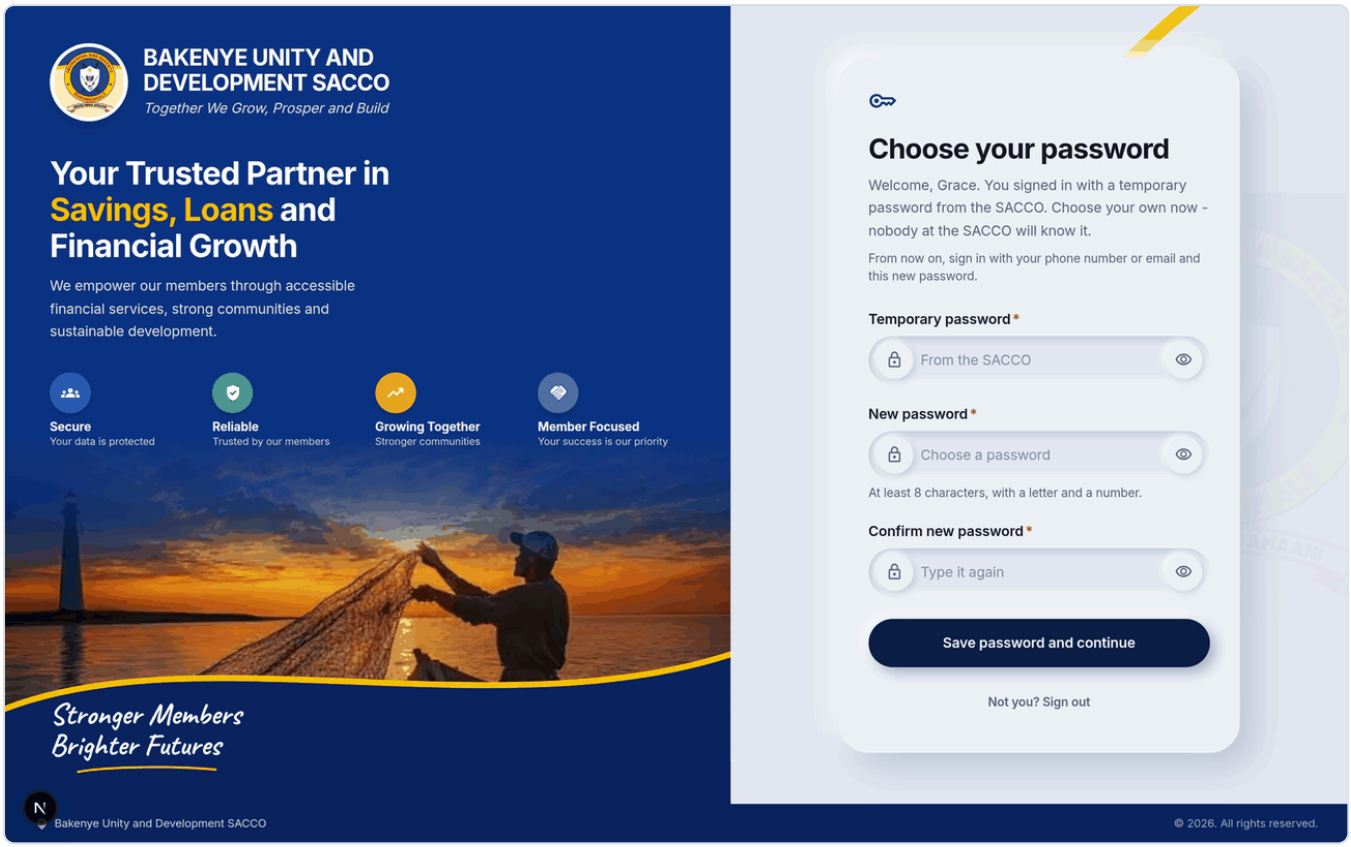

Type your **phone number** — or your email address, if the SACCO holds one for you — and your password.

Screenshot 1. The sign-in screen. The same form serves members and staff.

2 Choose your own password, the first time

A new or reset account arrives on a temporary password such as **WJPV-7625**. The system will not open anything else until you replace it.

Screenshot 2. Choose your password. Type the temporary one, then your own, twice.

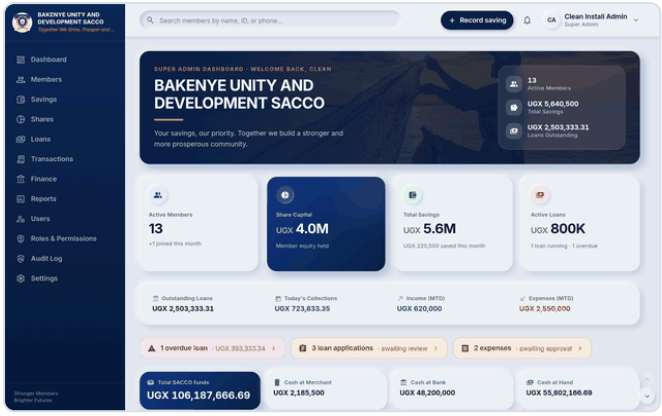

> **Nobody at the SACCO knows the password you end up with**
>
> The officer who created your account saw the temporary password once. Once you have replaced it, no member of staff — including the Super Admin — can read your password. They can only issue you a new temporary one.

3 Arrive at your own dashboard

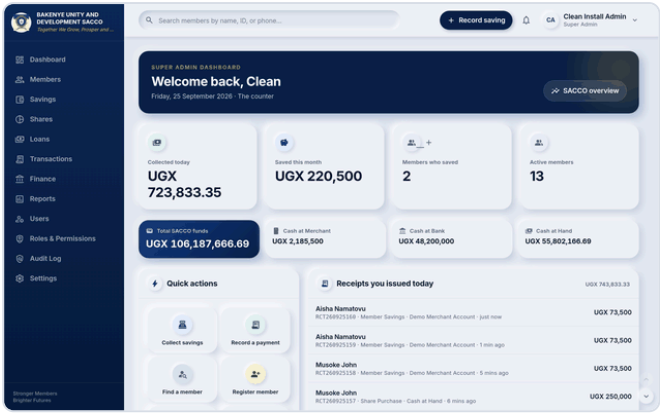

Where you land depends on your role, and that is a setting on the role itself:

Role	Dashboard
Super Admin, Admin	Administration
SACCO Manager, Viewer	SACCO overview
Cashier / Teller	Cashier desk
Loan Officer	Loans desk
Accountant	Finance
Field Officer	Collections

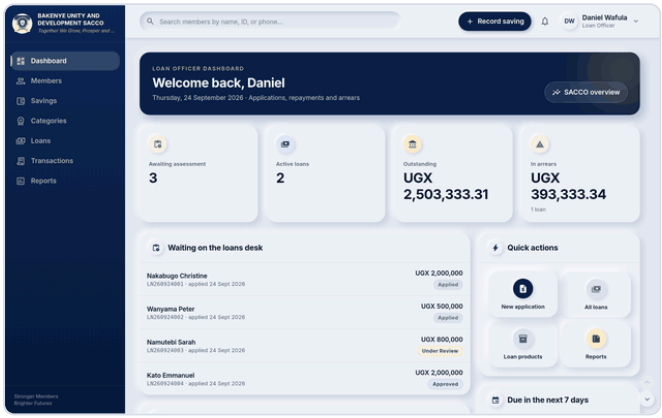

The dashboards

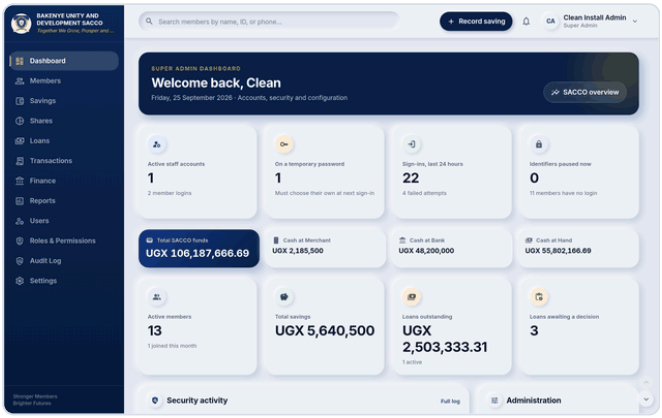

Screenshot 3. SACCO overview — the whole SACCO at a glance.

Screenshot 4. Cashier desk — today's counter work.

Screenshot 5. Loans desk — applications, repayments due, arrears.

Screenshot 6. Administration — accounts, security and configuration.

Finding your way around

The menu down the left is the whole back office. It shows only what your role may use, so two members of staff sitting side by side will see different menus. On a phone the same menu is behind the ☰ button at the top.

The **search box** at the top of every screen finds a member by name, member number or phone number from anywhere in the system.

Signing out

Open your name at the top right and choose **Log Out**.

> **Always sign out before leaving the counter**
>
> Anything done while your session is open is recorded as done by *you*. If you step away without signing out, and someone else records a payment, the audit log will say it was you. The system also signs a session out by itself after a period of inactivity, which management sets under Settings → Security — but do not rely on it.

4. Member management

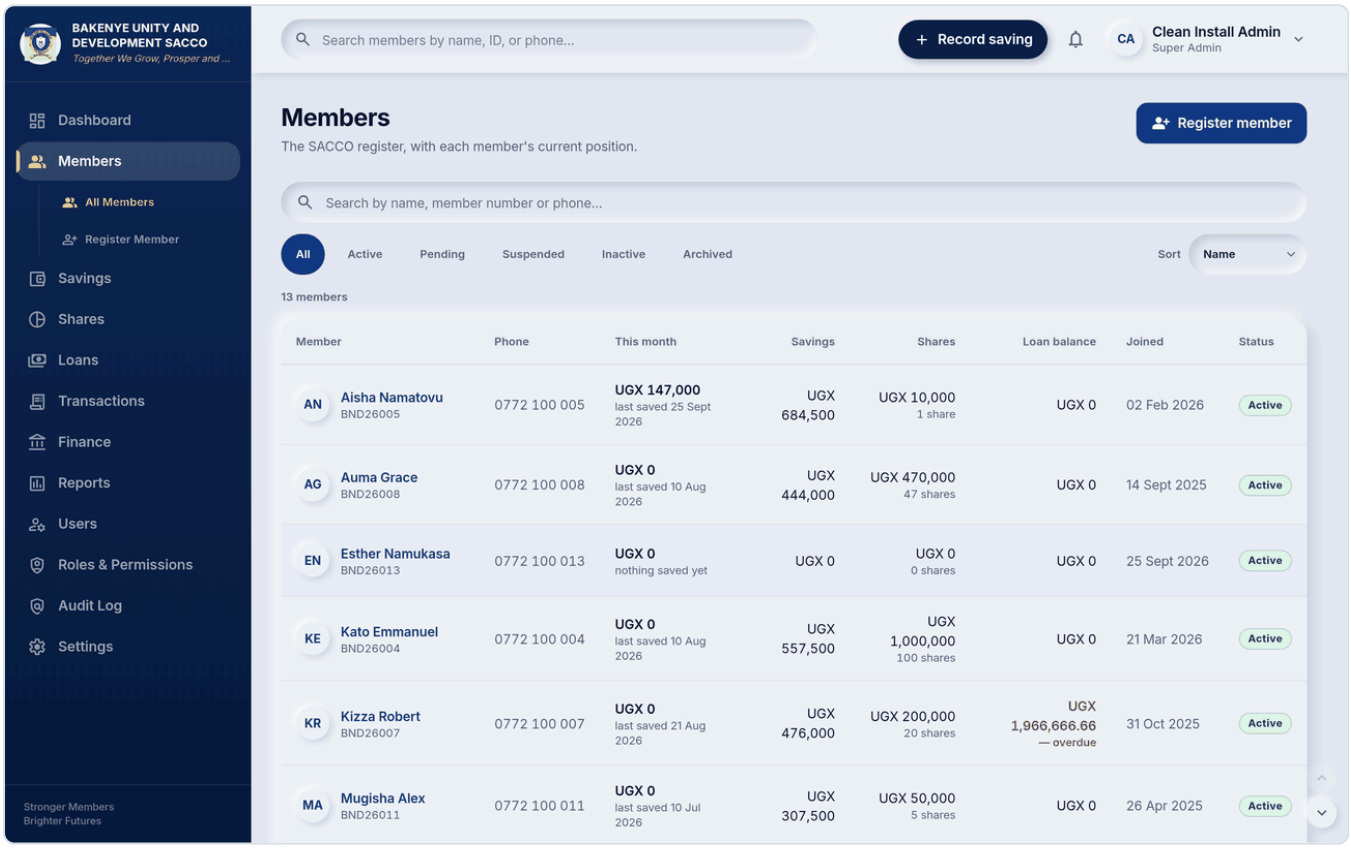

Everything the SACCO knows about a member, and who may change it.

Who may use this section: viewing and searching — every staff role. Registering, editing and changing status — **Admin** **Manager** **Super Admin** only.

Finding a member

1 Open Members

Choose **Members** from the menu, or type into the search box at the top of any screen.

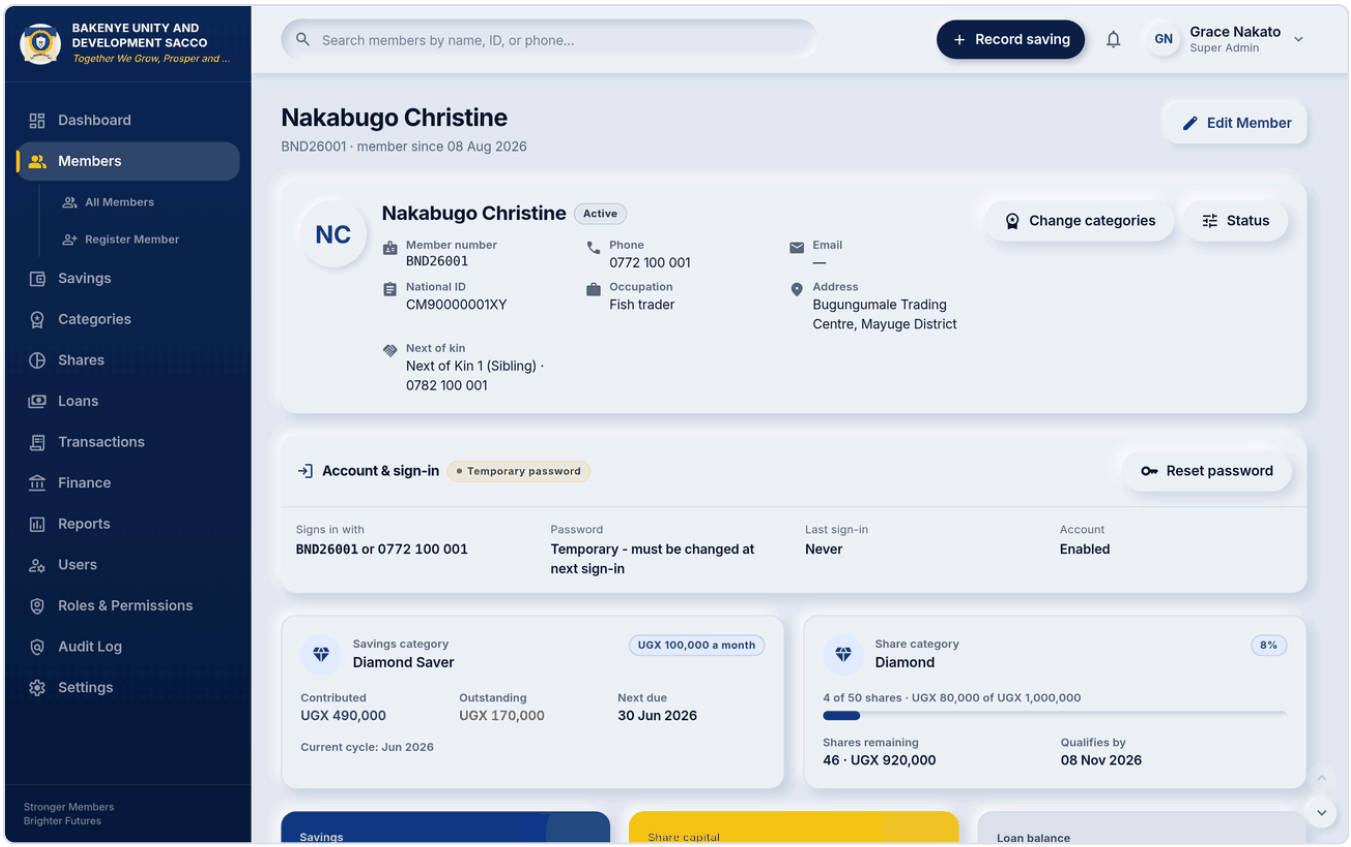

Screenshot 7. The Members screen: search, filter by status, and the register.

2 Search

You can search by **member number** (BND26006), by **name**, or by **phone number**. Part of a name is enough.

3 Open the member

Their page gathers everything: their record, their sign-in account, their categories, their balances, their loans and their recent transactions.

Screenshot 8. A member's page. Every figure on it is worked out from the ledger.

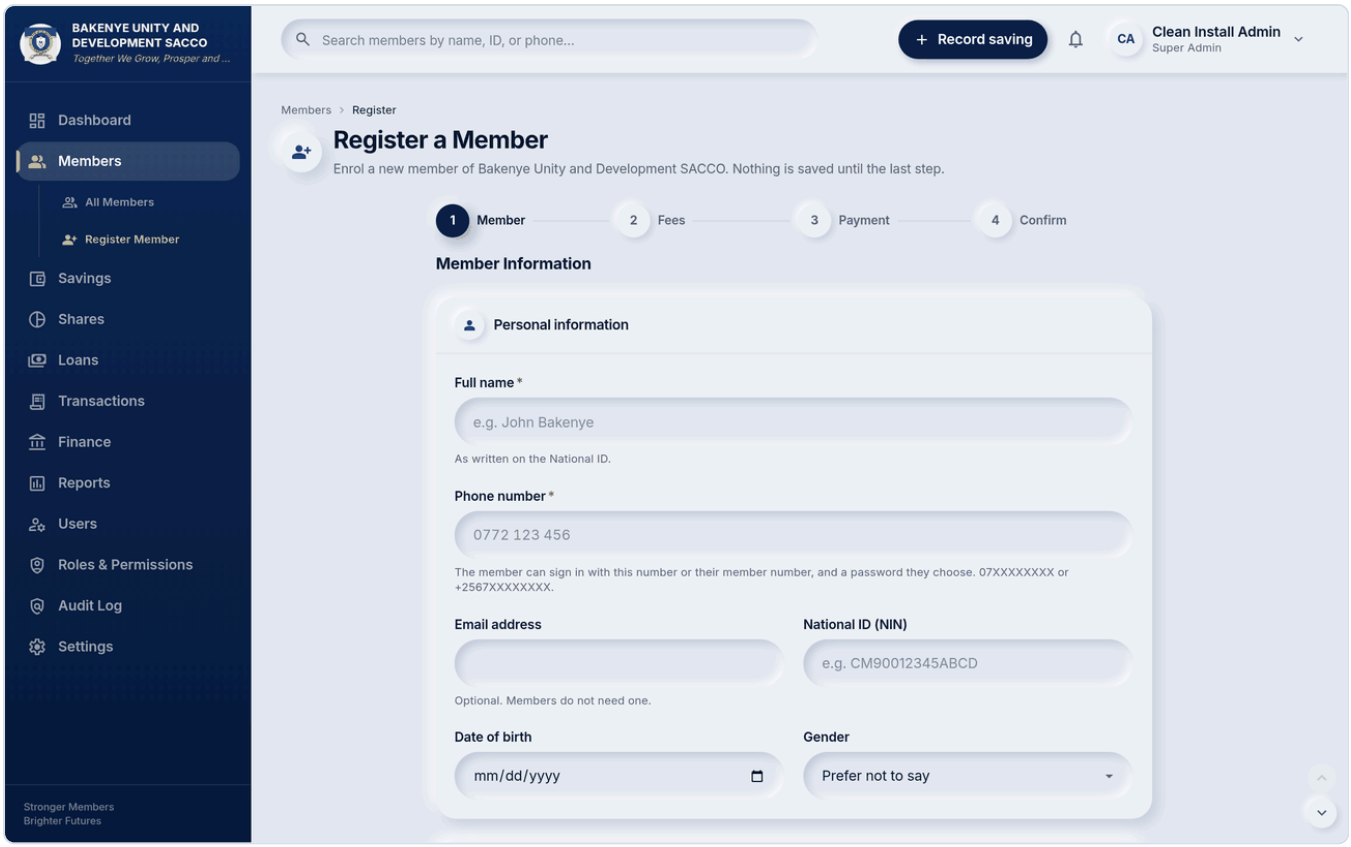

Registering a new member

Who may do this: Admin · Manager · Super Admin

Registration is one operation in four steps. **Nothing at all is saved until the last step**, so you can go back and correct anything before you finish.

> **There are no categories to choose**
>
> Monthly savings are open — a member saves any amount they choose — and every share costs the same. So registration asks who the member is and what they are paying, and nothing about a tier.

1 Members → Register Member: the member's details

Screenshot 9. Step 1 of the wizard.

Full name (required)
Exactly as written on the National ID.

Phone number (required)
07XXXXXXXX or +2567XXXXXXXX. The system stores it in one form, so the same person cannot be registered twice under two spellings.

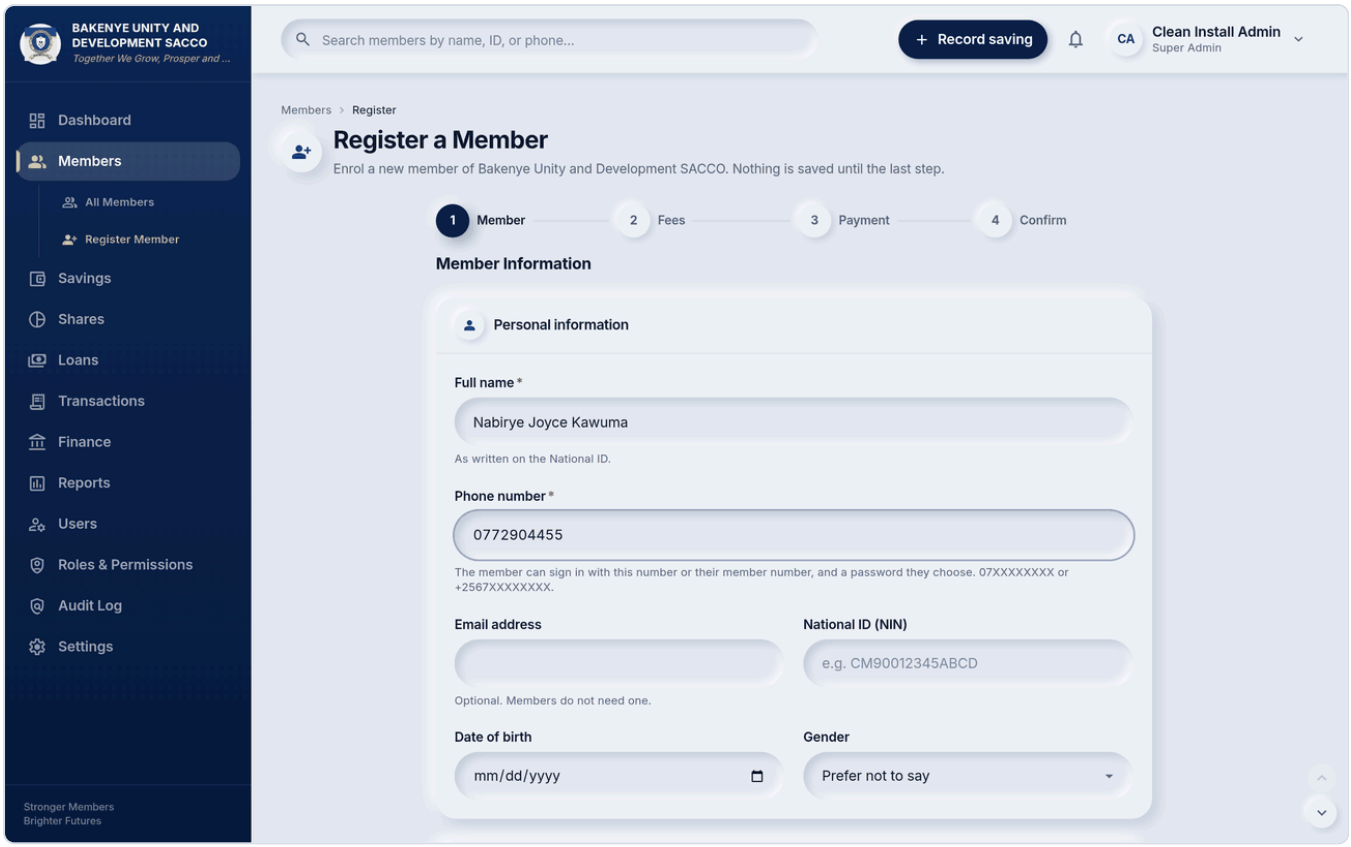

Email address
Optional. Most members have none; it is not needed.

National ID, date of birth, gender
Required or optional depending on what management has set under *Settings → Members*.

Address, occupation
Free text.

Next of kin
Name, relationship and phone number.

Membership date
Today, unless the member joined earlier.

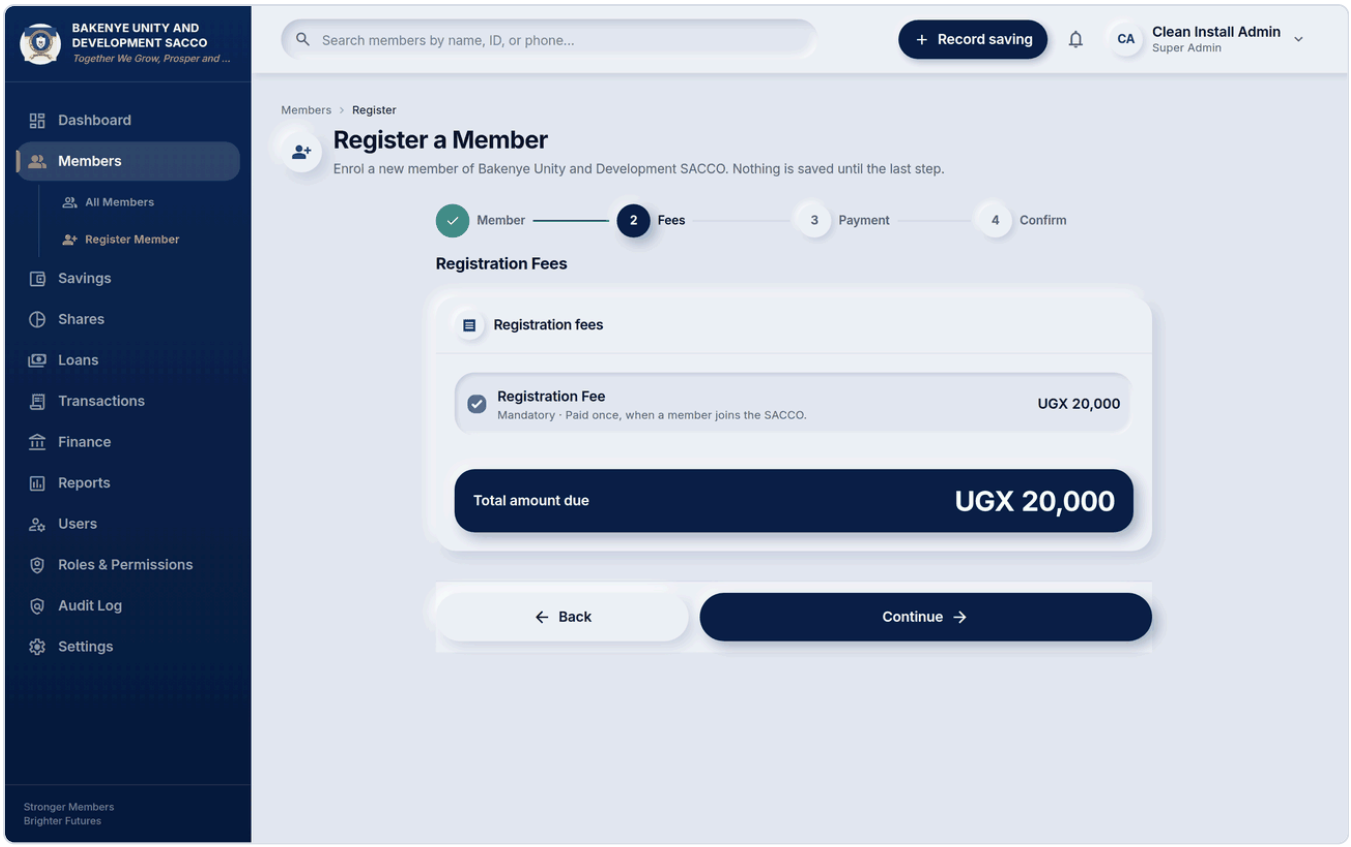

Screenshot 10. Step 1 completed.

> **If the phone number already belongs to a member**
>
> The system stops you. Two live members may share a number only if somebody holding *Allow a shared phone number* (Admin or Super Admin) authorises it and records a reason.

2 Fees

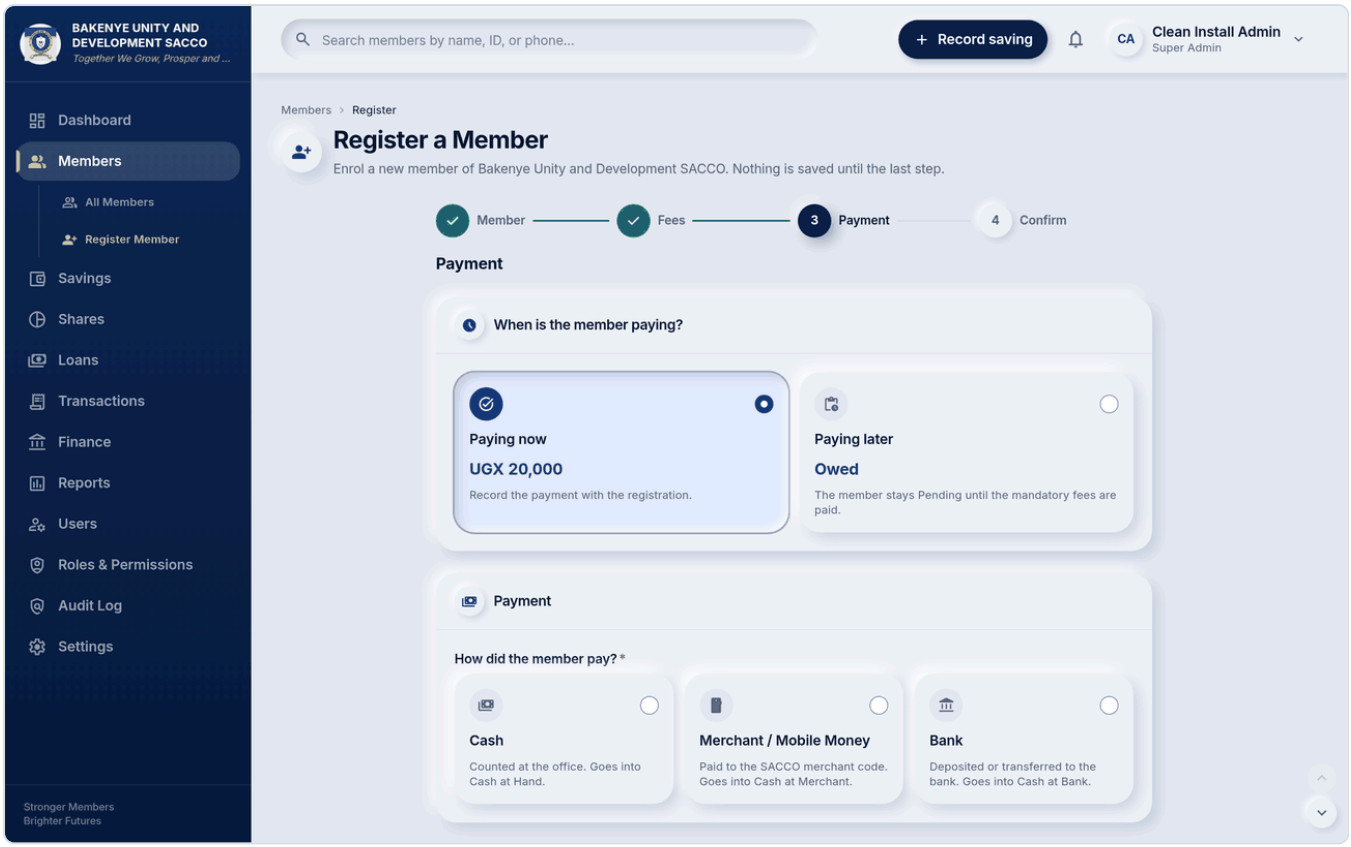

The system totals every fee that applies at registration, at the amount in force today. The SACCO's registration fee is **UGX 20,000**.

Screenshot 11. The fees due at registration.

> **Fees are configuration, not code**
>
> What appears here comes from *Settings → Fees*. If the SACCO has no fees set up, nothing is charged and the screen says so.

3 Payment

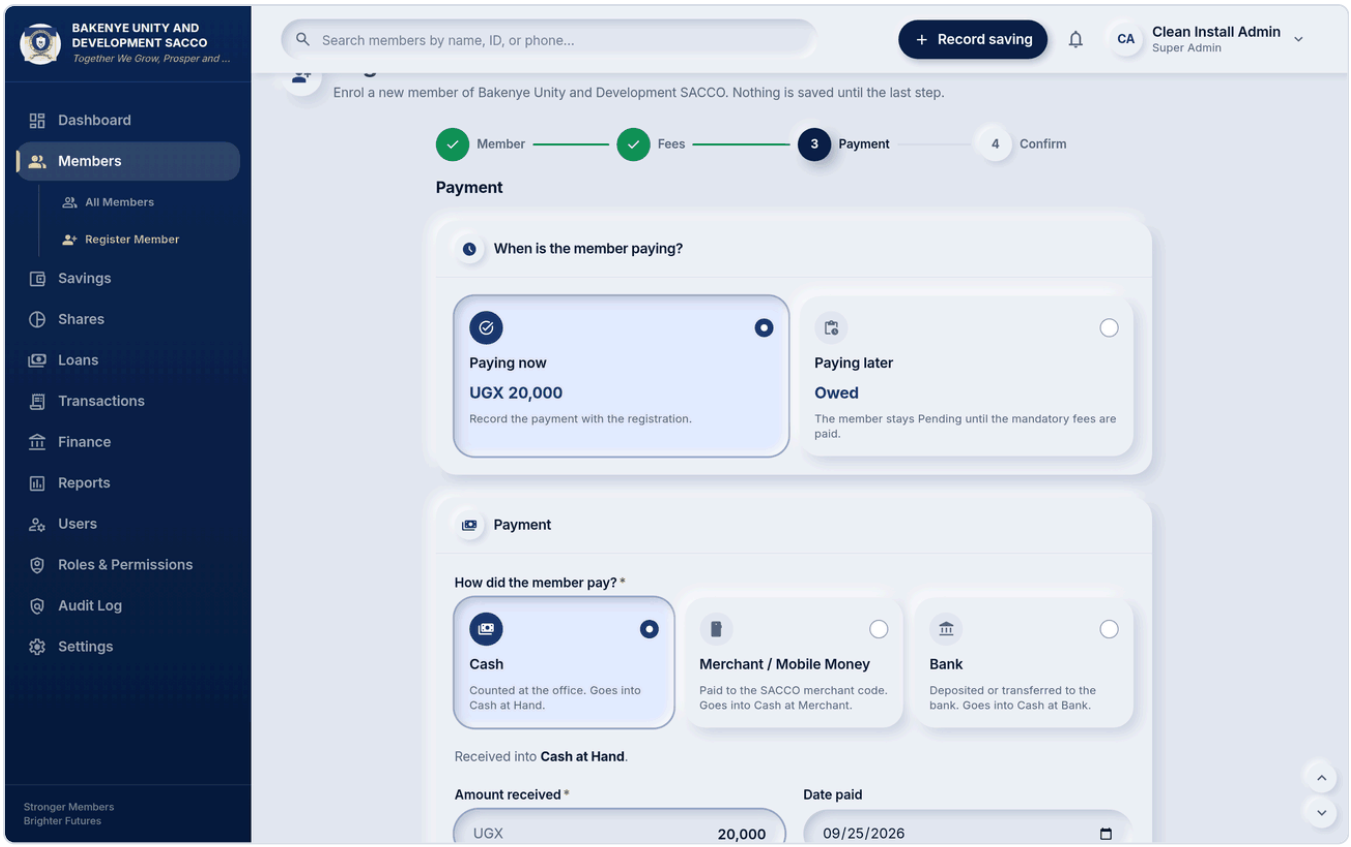

Screenshot 12. Paying now or later, and how the money came in.

- **Paying now** — record the payment with the registration.
- **Paying later** — the member is registered as **Pending** and becomes Active automatically when the mandatory fees are paid.

If they are paying now, say how:

Method	Where the money is recorded
Cash	Cash at Hand
Merchant / Mobile Money	Cash at Merchant. The confirmation reference is required.
Bank	Cash at Bank. The bank reference is required.

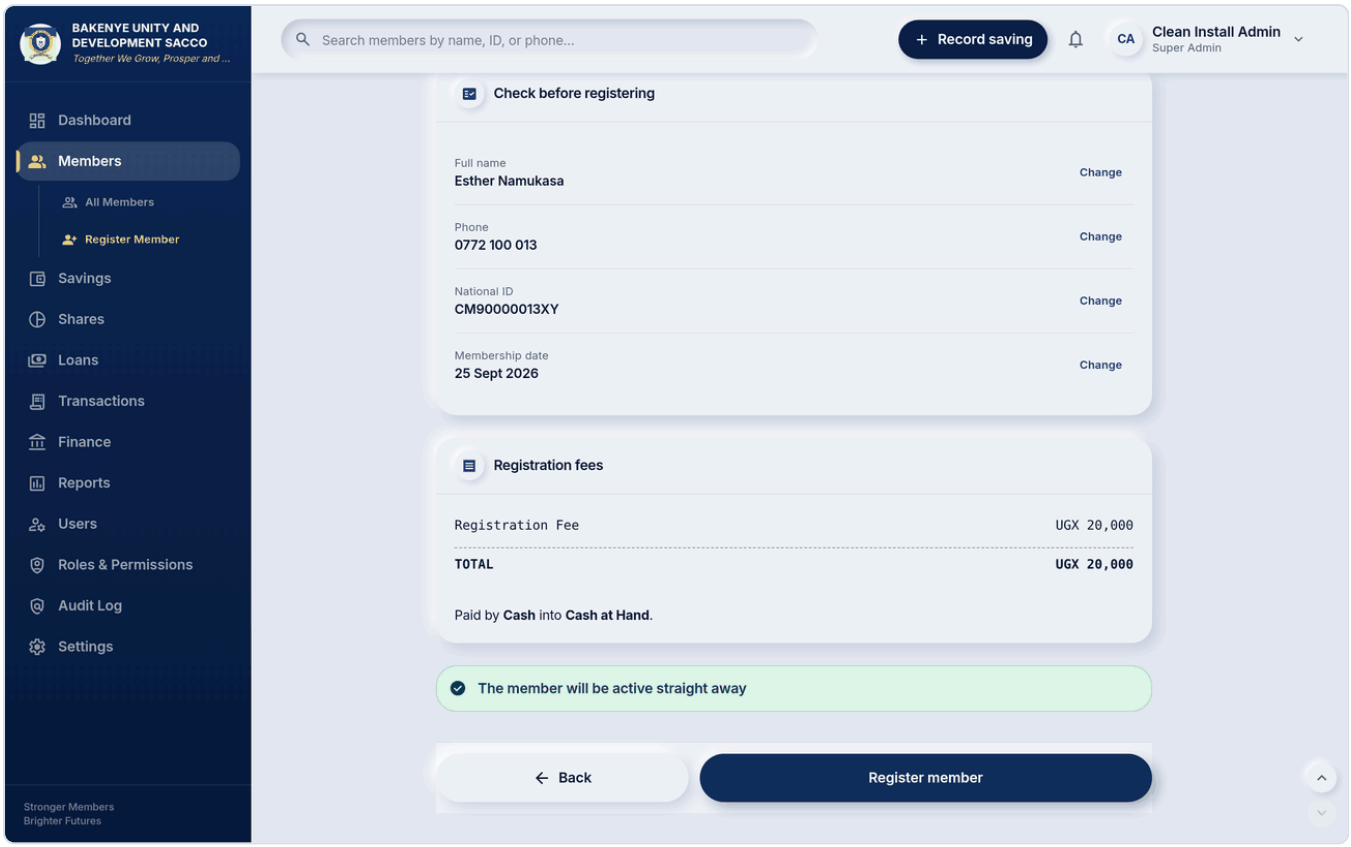

Screenshot 13. Cash chosen and the amount received entered.

> **Type the amount; the system checks it**
>
> It must equal the fees due. If it does not, the screen says so and will not go on.

4 Confirm, and register

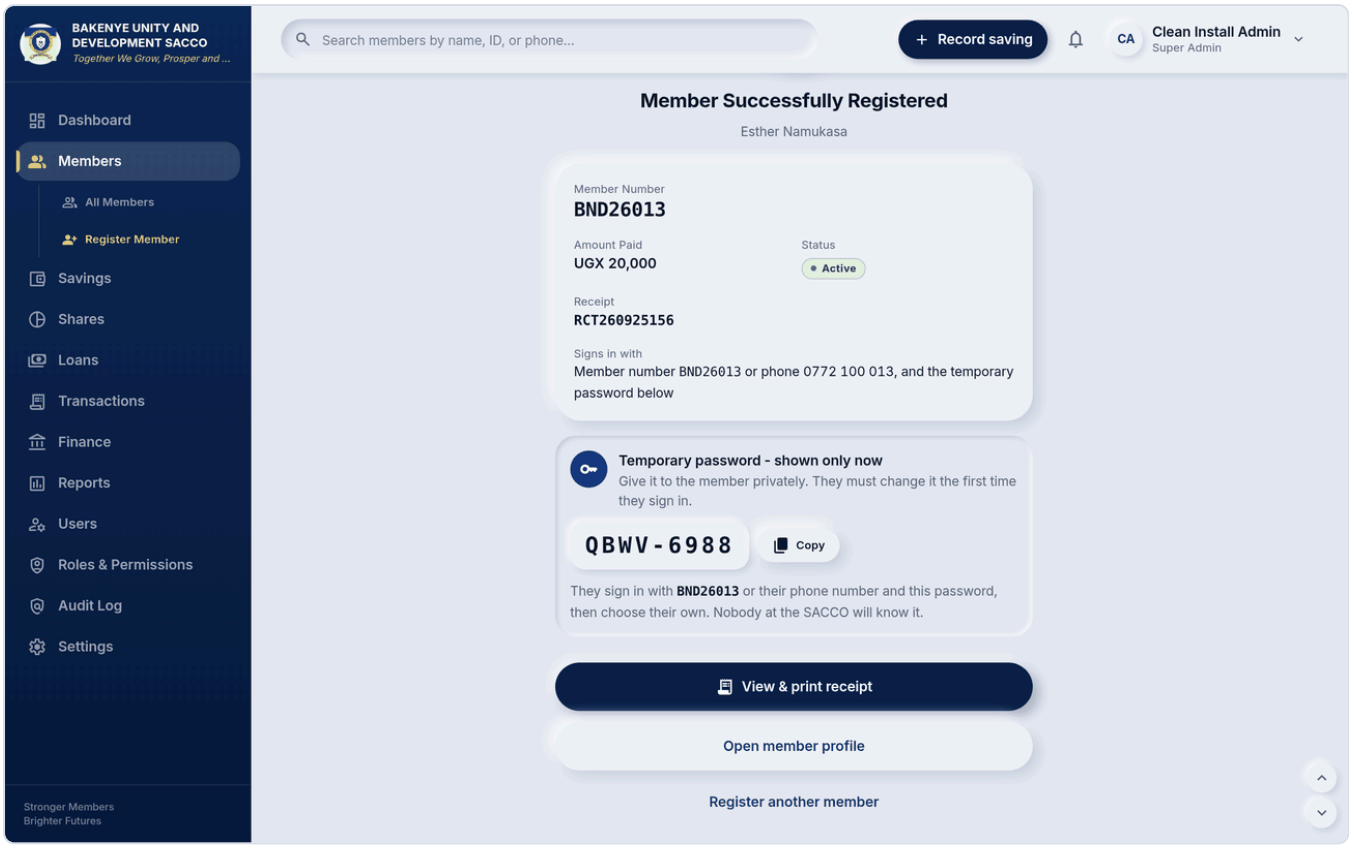

The last step lists everything you have entered. Read it against the papers in front of you before you press **Register member**.

Screenshot 14. The summary shown before anything is saved.

What happens when you press it — all of this, or none of it:

- the next member number is issued (BND + the year + the sequence);
- every applicable fee is charged at today's amount;
- the payment is posted to the right account;
- a receipt is issued;
- each fee is booked as income;
- the audit trail is written.

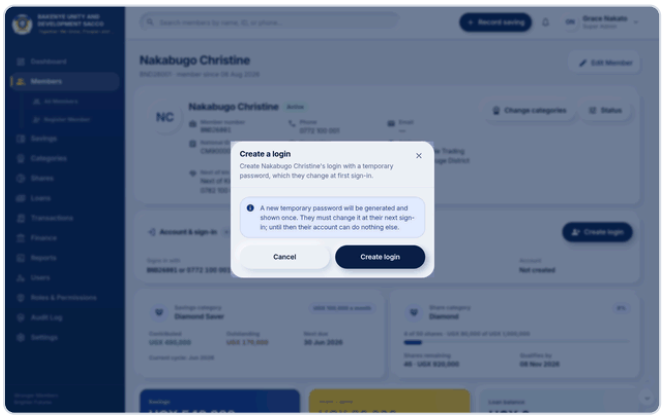

Screenshot 15. The result: member number, amount paid, status and receipt number.

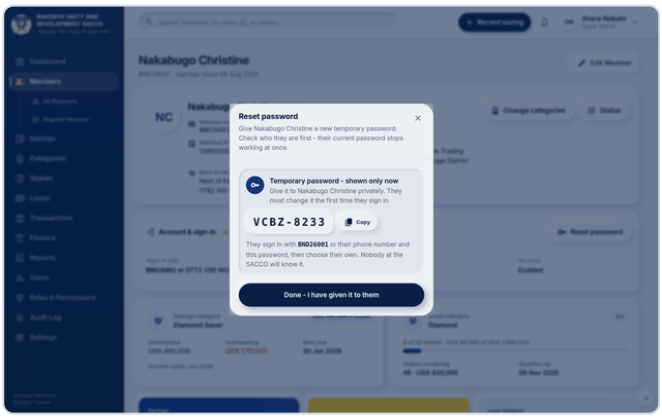

> **If something fails, nothing happened**
>
> A duplicate phone number, a missing reference, a fee that changed while the form was open — any of these stops the whole registration. You will never be left with half a member. And if you press the button twice, the member is registered once.

Giving the member their portal login

A member's login is created from their own page.

Screenshot 16. Create login — the confirmation.

Screenshot 17. The temporary password, shown once.

1. Open the member's page and press **Create login**.
2. Confirm. A temporary password is shown **once**.
3. Write it down for the member, hand it over, and destroy your note.

4. Tell them they will be asked to choose their own password the first time they sign in.

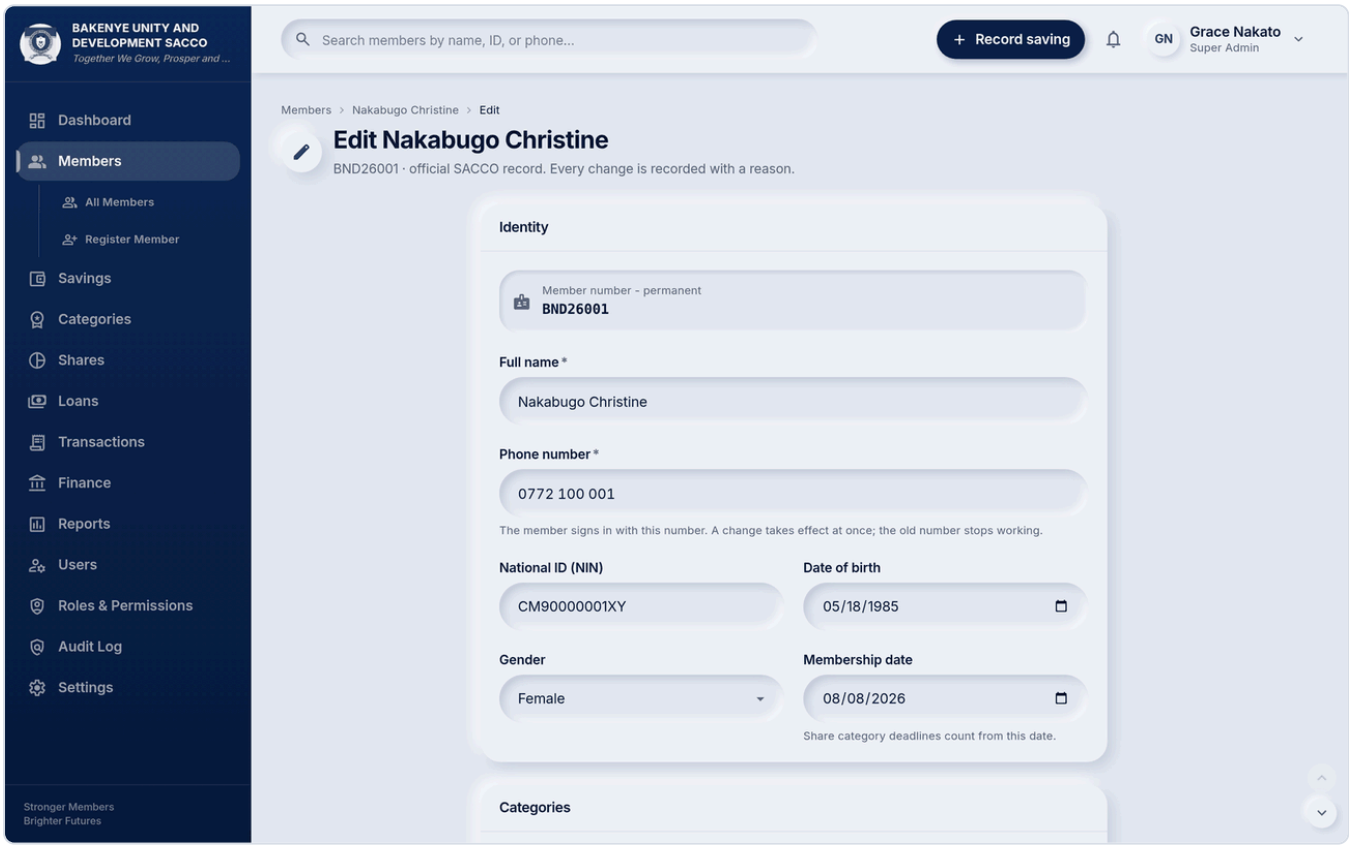

> **Check who you are speaking to first**
>
> Before creating a login or resetting a password, check the member's National ID. The person holding that password can see everything about that member's money.

Resetting a member's password

Press **Reset password** on the member's page. The old password stops working at once, a new temporary one is shown once, and the member must replace it at their next sign-in.

Editing a member's record

Who may do this: Admin | Manager | Super Admin

Screenshot 18. Editing a member. A reason is required.

- A **reason** is required, and it is kept.
- Every changed field is recorded: what it was, what it became, who changed it, when and why. It is all on the member's page under **History**.
- The **member number can never be changed** — by anybody, by any route.

Changing a member’s status

Status	What it means	Can they sign in?
Pending	Registered, mandatory fees not yet paid.	Yes
Active	A member in good standing.	Yes
Suspended	Membership suspended by management.	No — told they are suspended
Inactive	No longer participating.	No
Archived	Kept for the record only.	No

> **A member is never deleted**
>
> Their record and every transaction on it stay in the system for good. Status is how a membership is ended, and a reason is always required.

5. Shares

One share costs the same for every member, and a member may buy any whole number of them. There are no share categories, no required number and no deadline.

Viewing: every staff role. **Selling:** **Cashier** **Manager** **Admin** **Super Admin**

The share price

The price of one share is **UGX 10,000**. It is a setting, not a figure fixed in the software: management changes it under *Settings → Shares*, and the change is audited.

Shares bought	Total
1	UGX 10,000
5	UGX 50,000
20	UGX 200,000
100	UGX 1,000,000

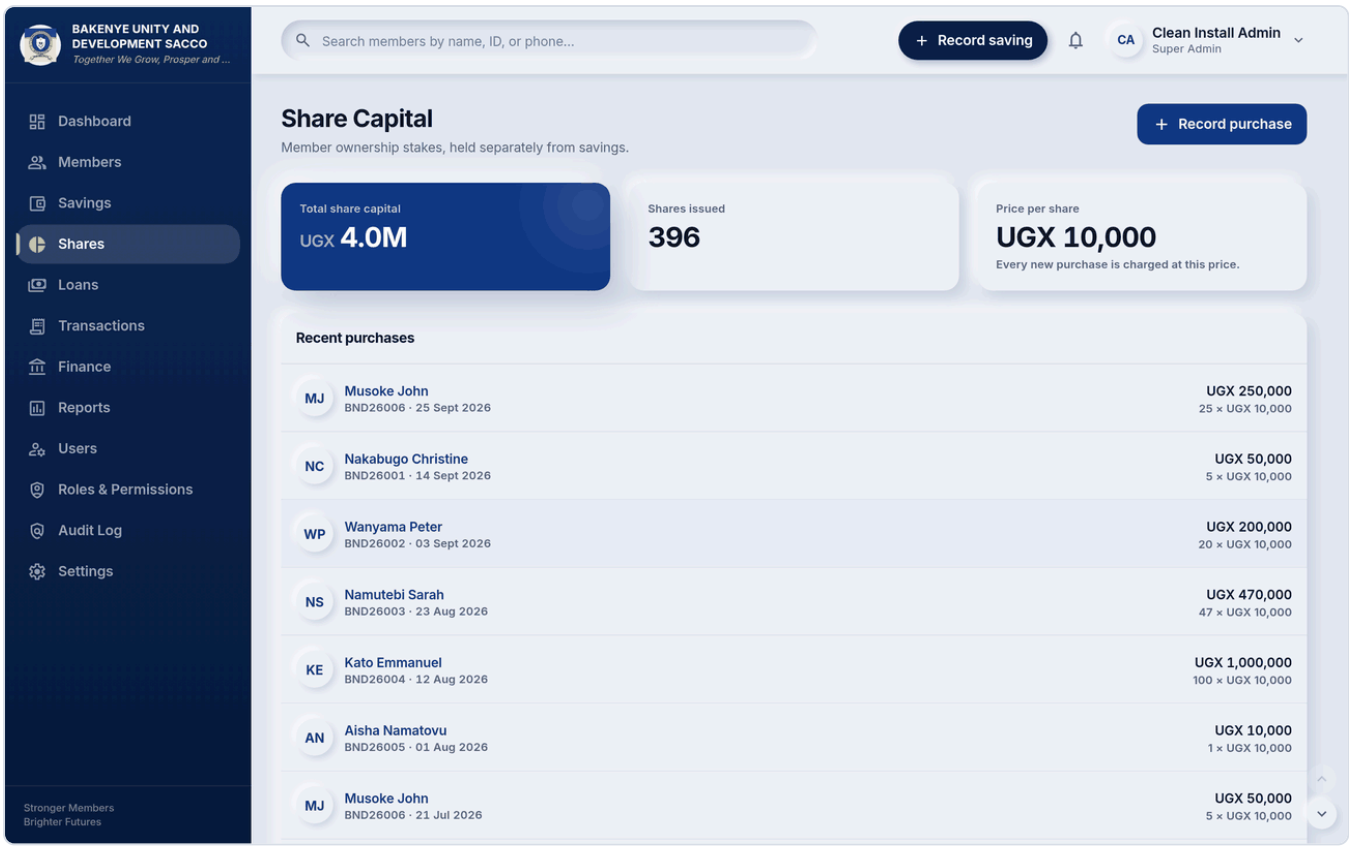

The total is worked out by the system, not typed in

The screen shows the number of shares multiplied by the price, and the database multiplies again when it records the sale. If the two ever disagree — because the price changed while the form was open — the sale stops and says so. Nobody can be charged a figure typed into a form.

Changing the price never restates a sale

Every share bought records the price at the moment of sale. Change the price today and every purchase already made keeps what it actually cost.

Share capital

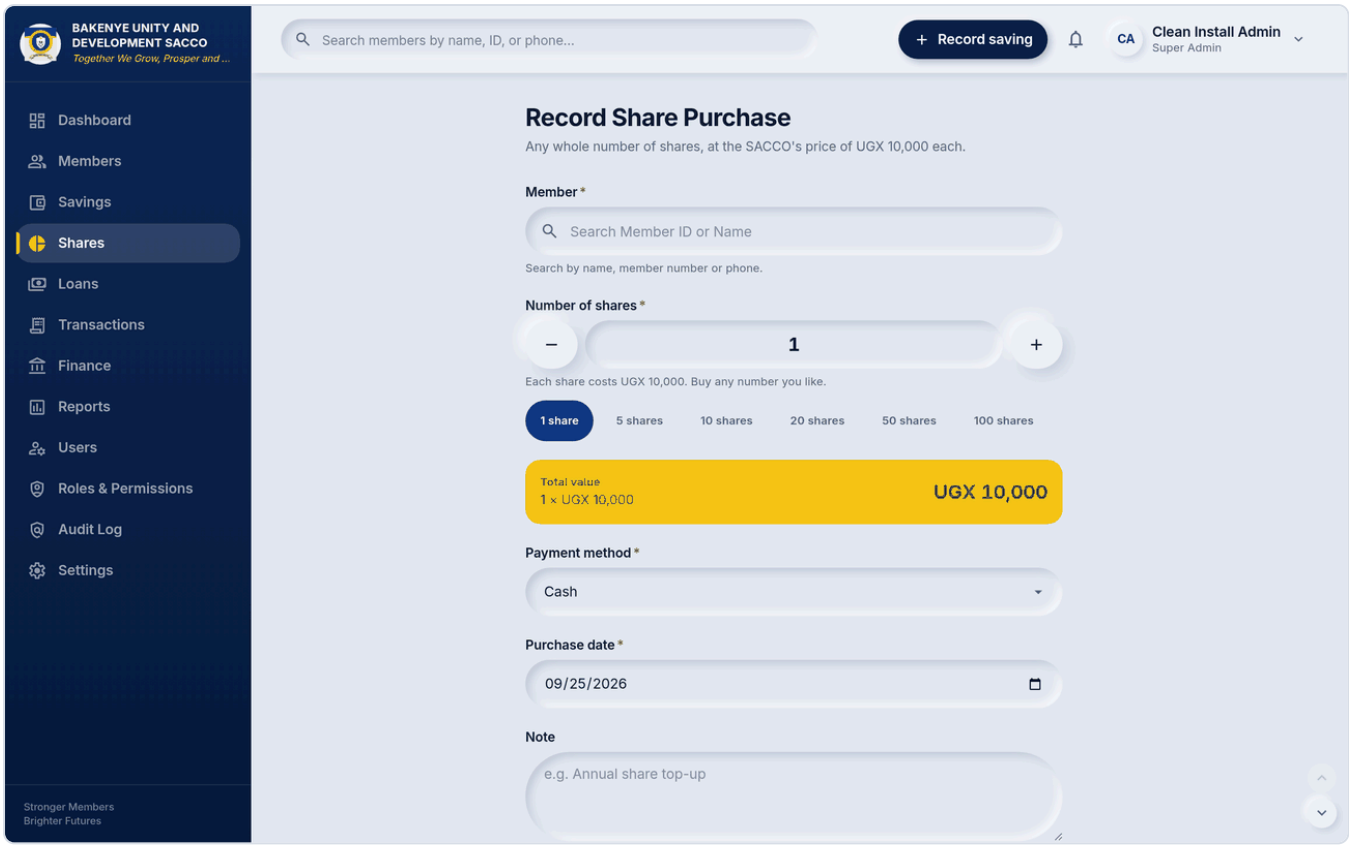

Screenshot 19. The share register: total capital held and every member's standing.

Recording a share purchase

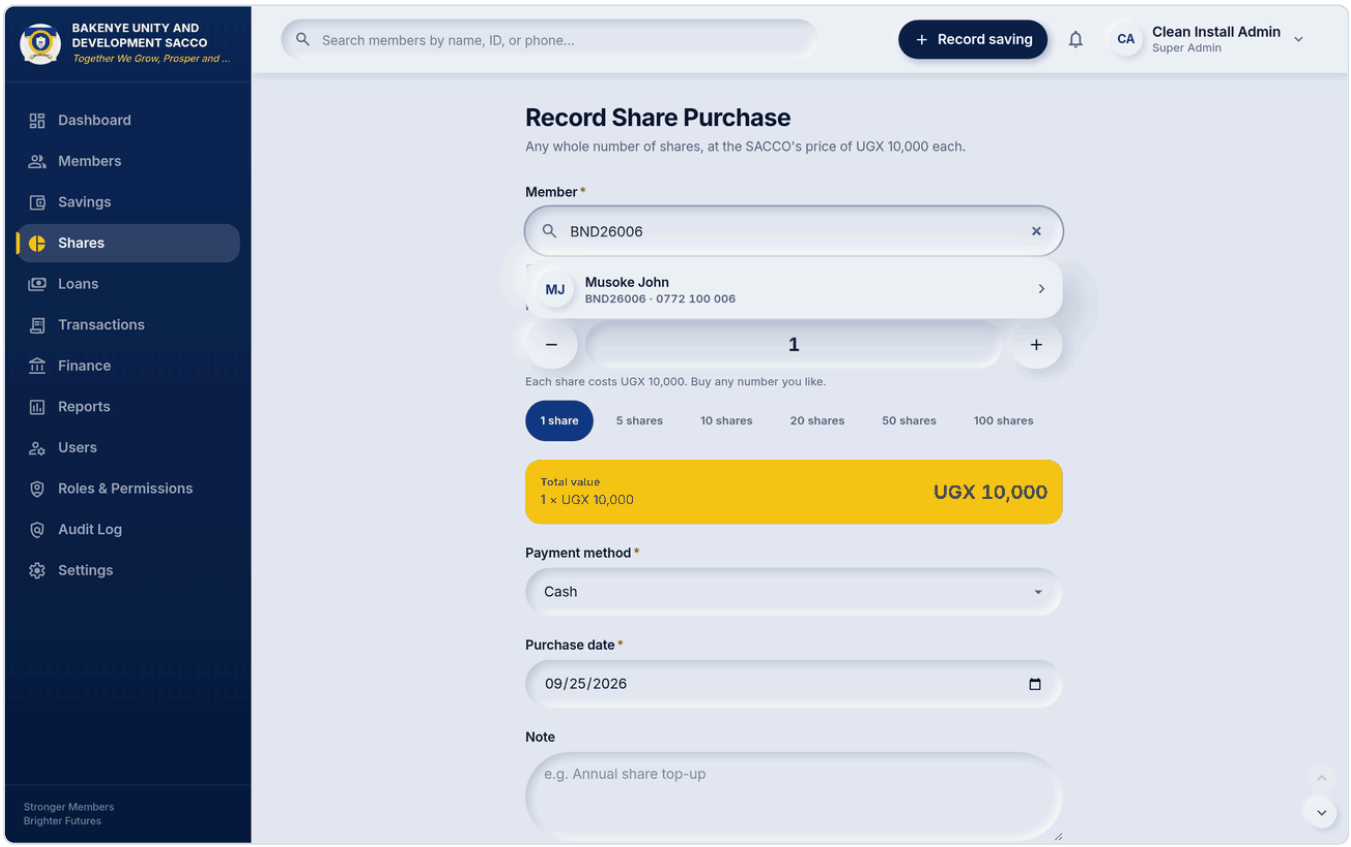

Who may do this: Cashier · Manager · Admin · Super Admin

1 Shares → Record Share Purchase

Screenshot 20. The share purchase screen.

2 Find the member

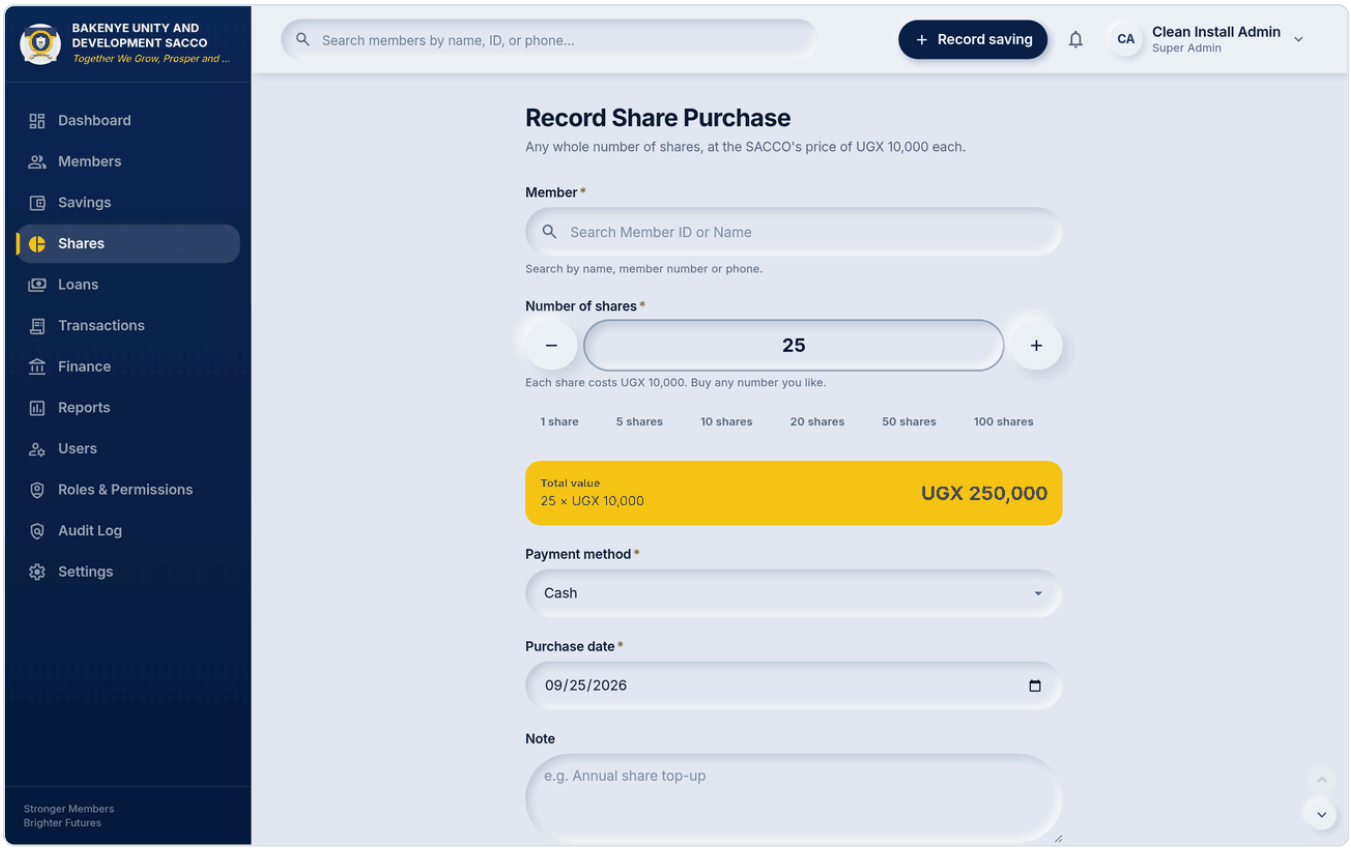

Screenshot 21. Searching for the member who is buying.

Check the member number and the name against what the member has told you before you go on.

3 Enter the number of shares and how they paid

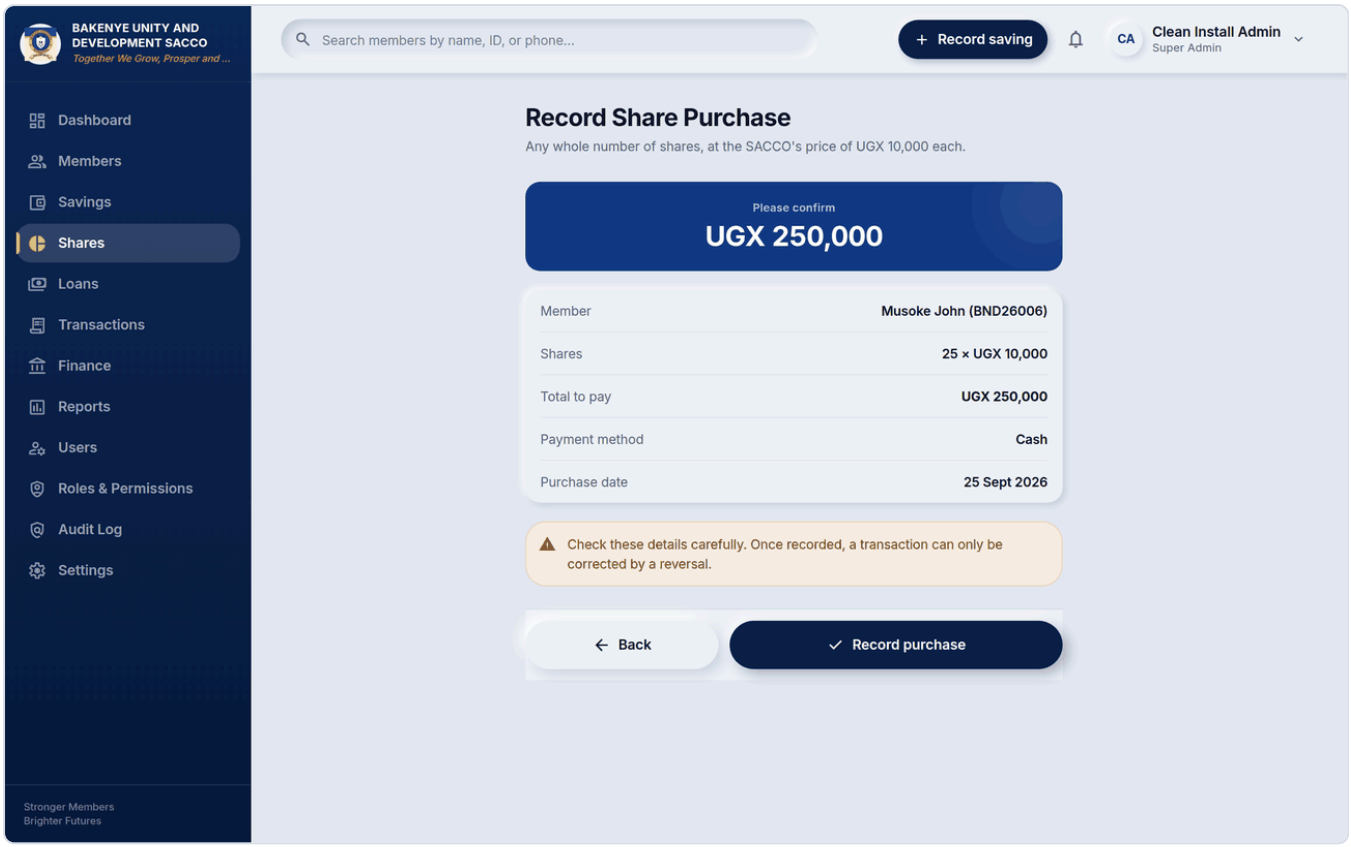

Shares are bought in **whole units**, and a member may buy as many as they like — there is no category and no ceiling. The screen multiplies by the share price and shows the total; you do not calculate anything. A fraction, a zero or a negative number is refused.

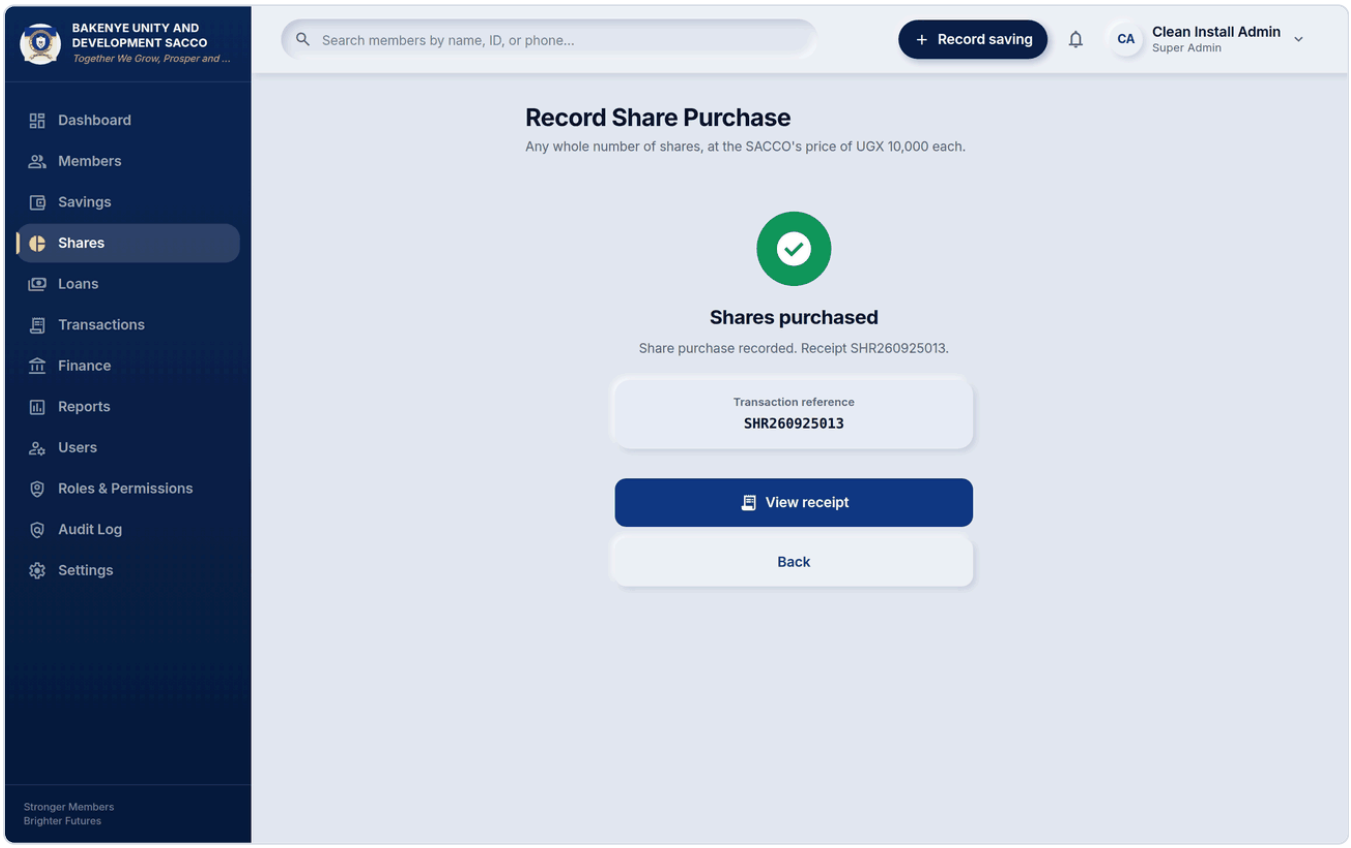

Screenshot 22. Five shares, paid in cash.

For mobile money or a bank transfer, the confirmation reference is required.

4 Review, then record

Screenshot 23. The confirmation summary.

Screenshot 24. The result, with the SHR receipt reference.

Expected result: a receipt reference beginning **SHR**, and the member's share count and share value increased by what they bought.

There is no "sell back" or "adjust" for shares

A share purchase recorded in error is corrected by a **reversal** (Section 12), by somebody who holds that permission. Do not try to balance it with a second, opposite purchase.

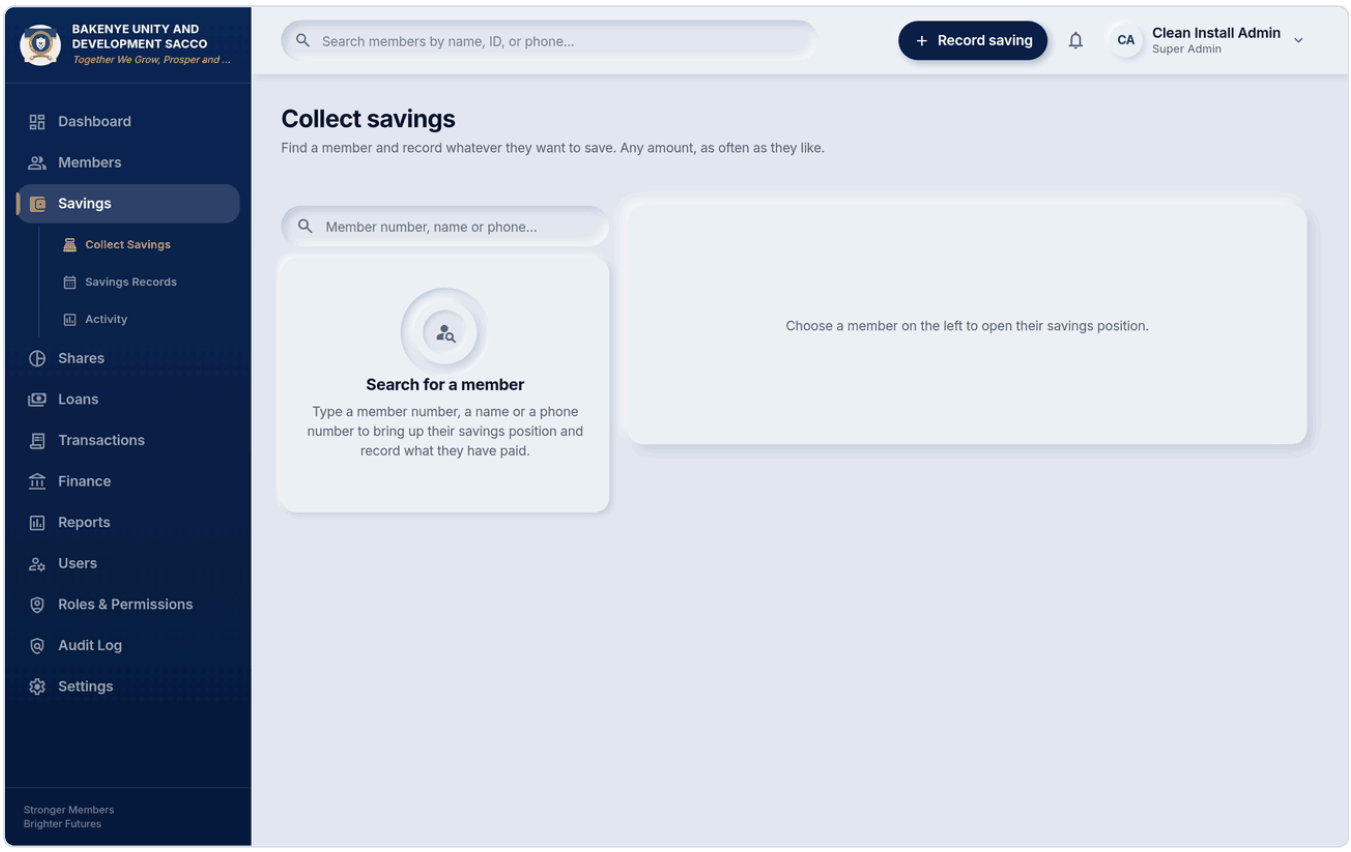

6. Savings: collecting and recording

This is the counter's main job, and the screen is built around it: find the member, check it is the right one, and record whatever they brought.

Monthly savings are open. A member saves any amount they choose, as often as they choose. There is no monthly target, nothing is outstanding, and a month a member does not save in raises no arrears, no overdue amount and no penalty.

Who may record savings: **Cashier** **Field Officer** **Manager** **Admin** **Super Admin**. Everybody else may look.

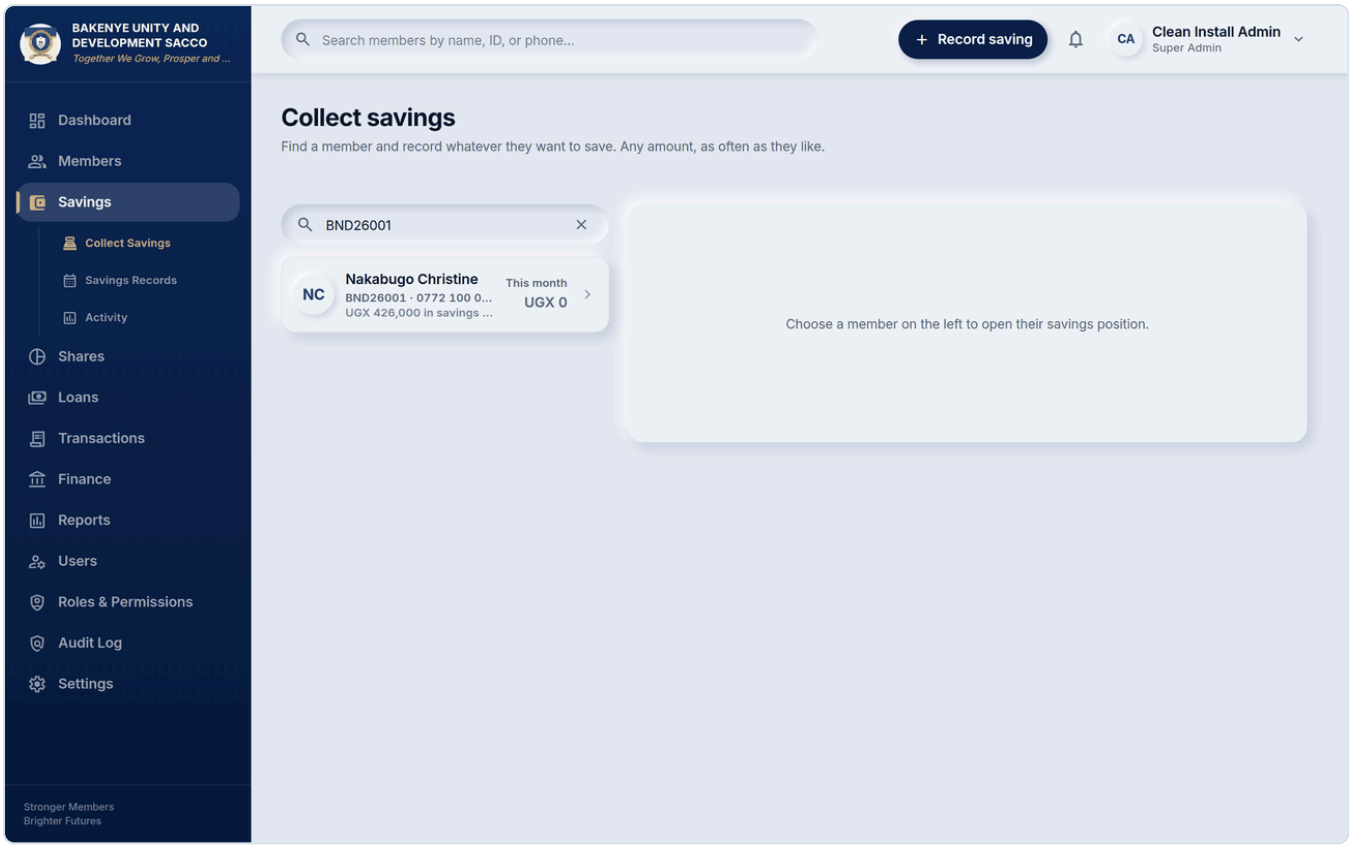

1 Open Savings → Collect Savings

Screenshot 25. The collection screen, waiting for a member.

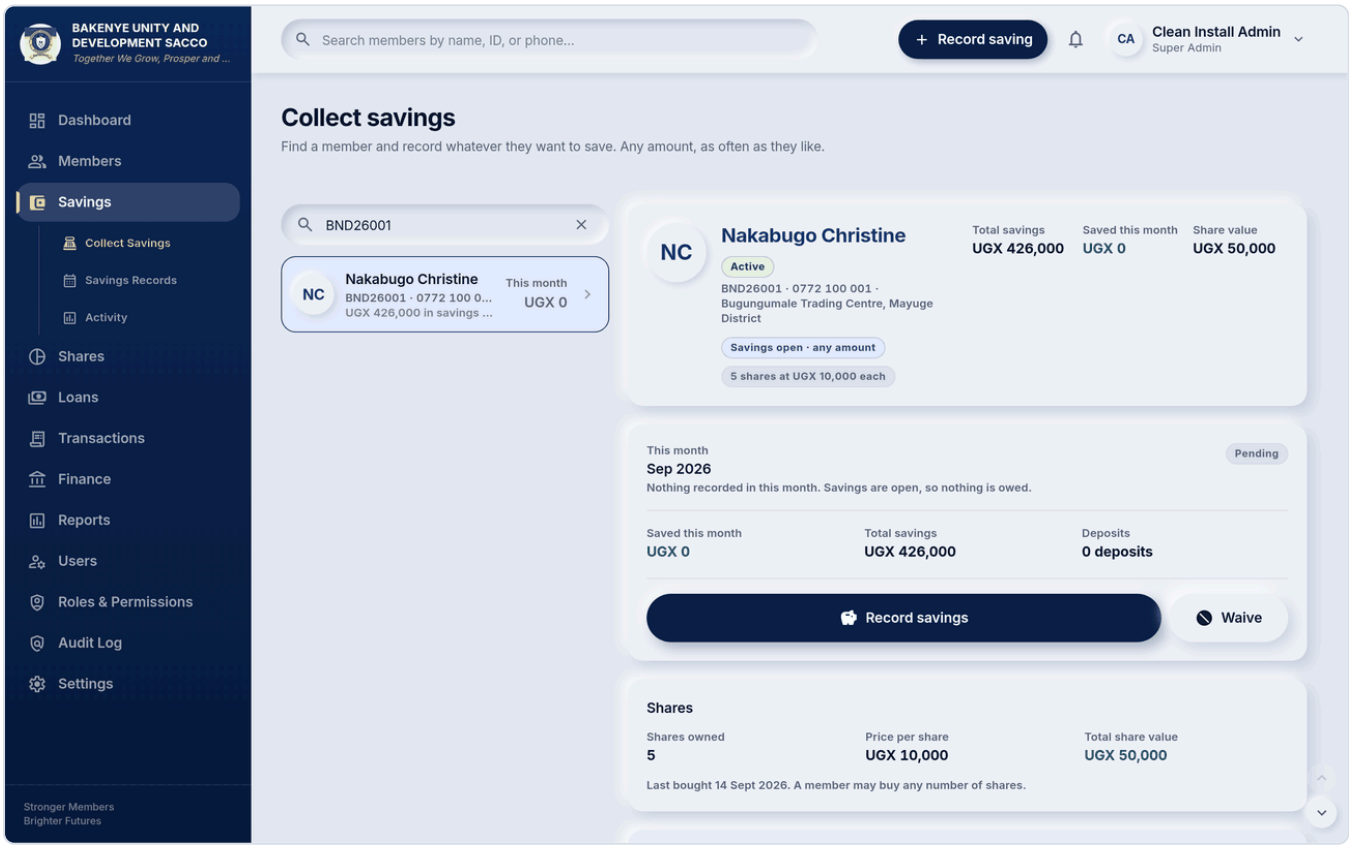

2 Find the member

Search by member number, name or phone number. The result shows the member, their savings balance and what they have saved this month, before you open them.

Screenshot 26. A search result showing where the member stands.

3 Check that this is the right member

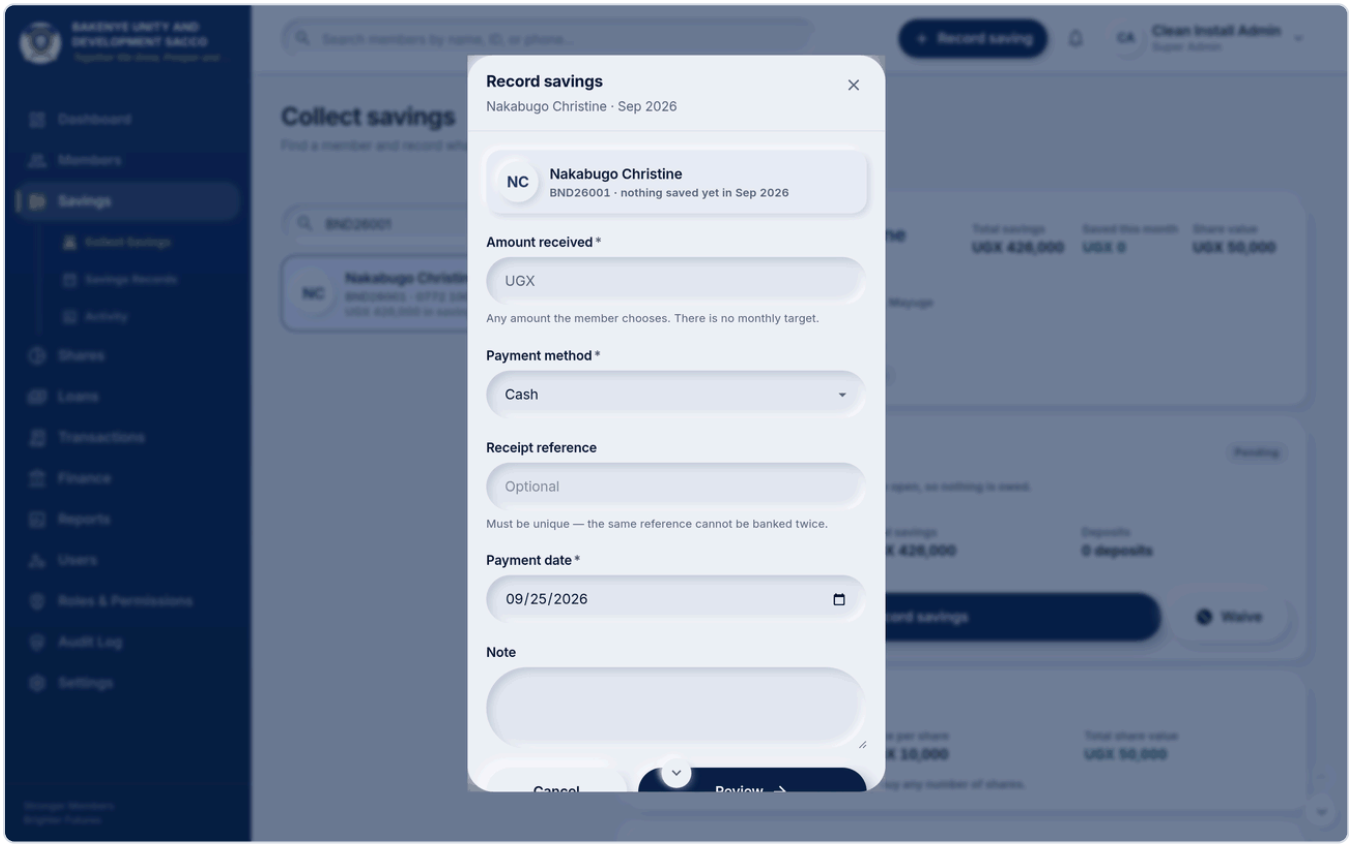

Screenshot 27. The member panel: total savings, saved this month, shares and history.

Before you take the money, read back to the member:

- their **name** and **member number**;
- their **total savings**;
- what they have **saved this month** so far.

> **If the member says any of that is wrong, stop**
>
> Do not record anything. Two members with similar names is the commonest way money ends up on the wrong account. Check the member number against something they carry.

4 Press Record payment

Screenshot 28. The Record payment form.

Amount received (required)
What is actually in your hand. The field starts empty on purpose: there is no target, so nothing may suggest an amount to the member. Any positive amount is valid — UGX 5,000, UGX 20,000, UGX 73,500.

Payment method (required)
Cash, Mobile Money, Bank Transfer or Cheque.

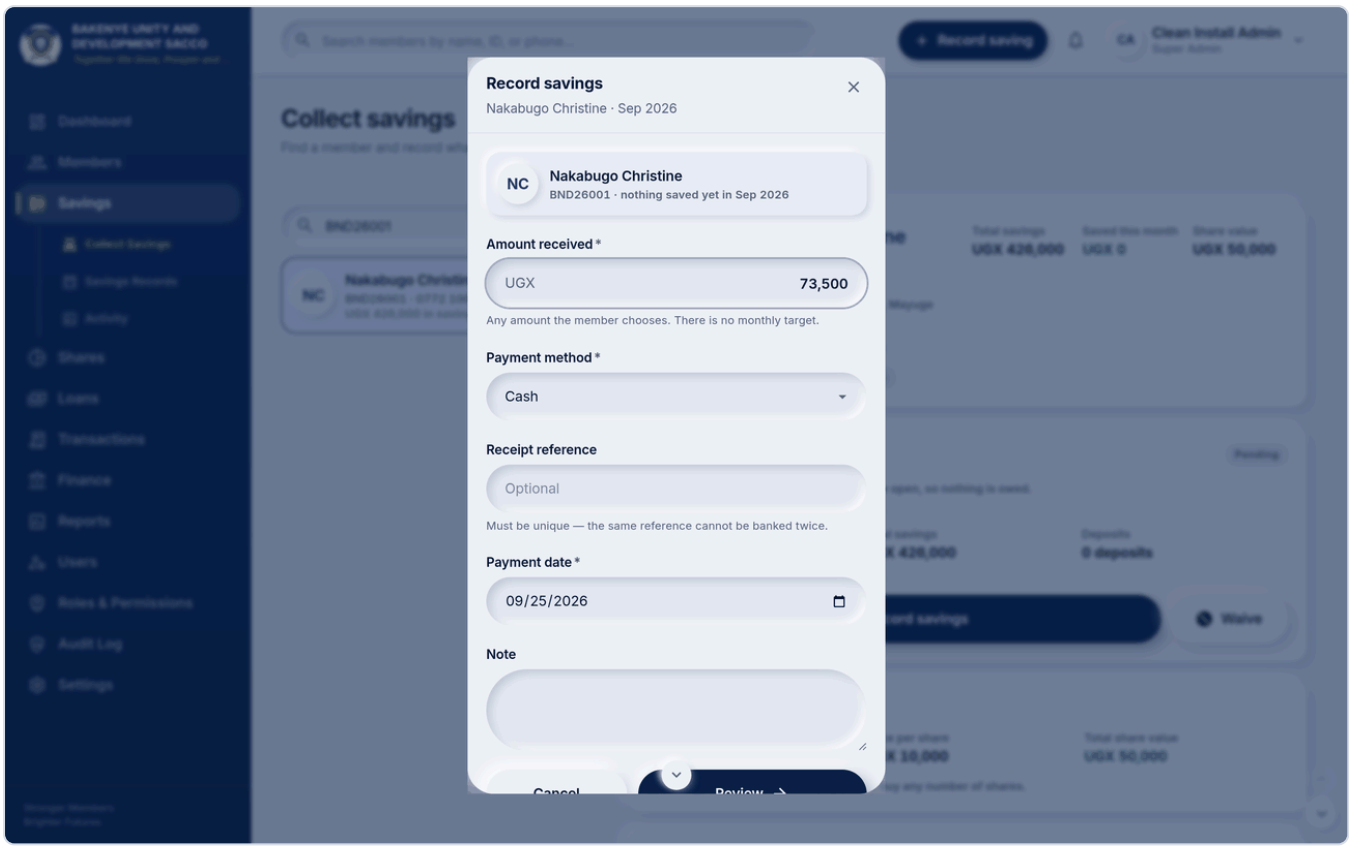

Transaction reference
Required for mobile money and bank. Type it from the confirmation message. The same reference cannot be used twice.

Payment date (required)
Today by default. It may be backdated to the day the money was actually received; a future date is refused.

Note

Optional, and useful when something about the payment needs explaining.

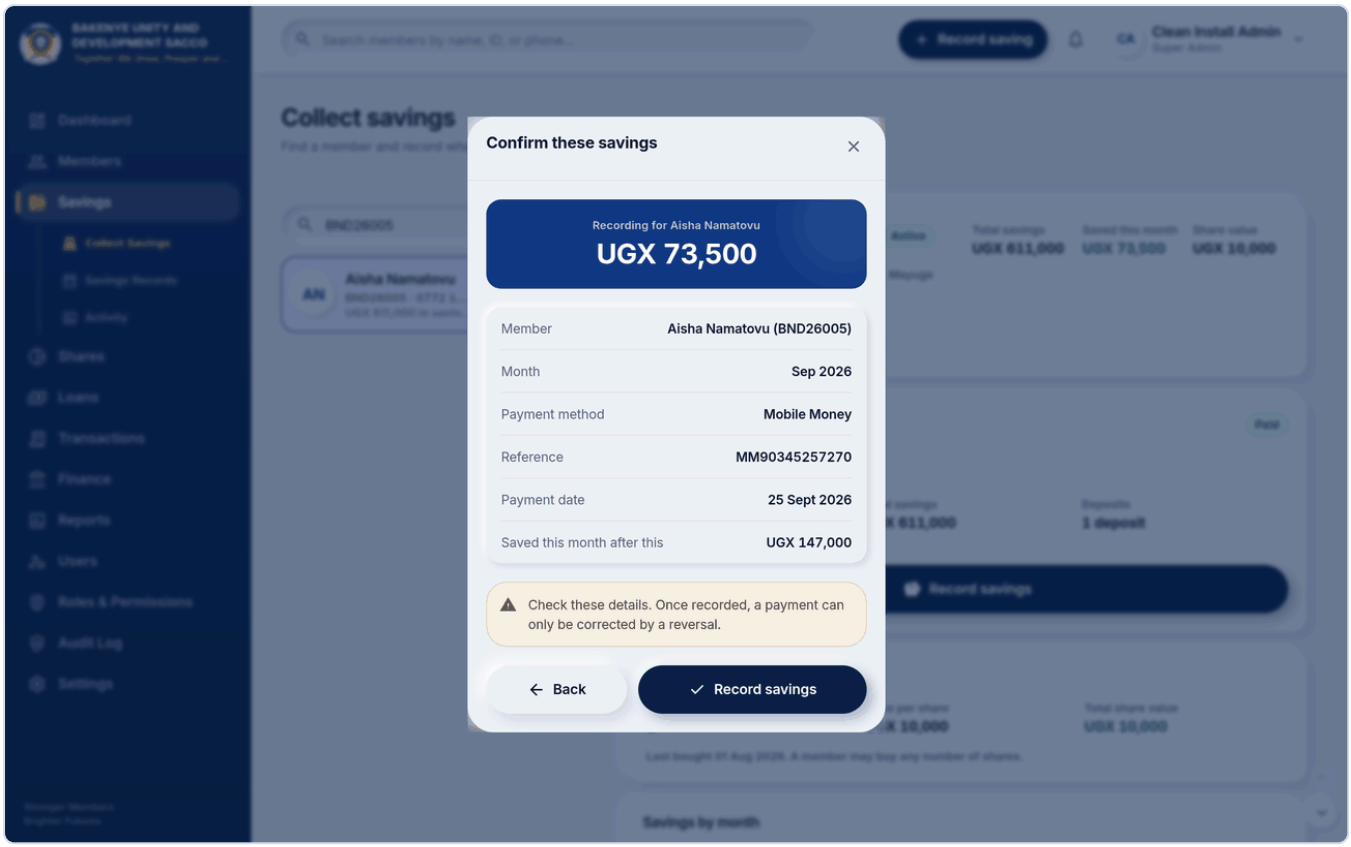

5 Enter what was received

Screenshot 29. The amount the member brought, by mobile money, with the provider reference.

> **Choosing "Mobile Money" records money already received**
>
> It does not ask the provider for anything. Type the reference from the confirmation message in front of you. If you cannot see a confirmation message, do not record the payment.

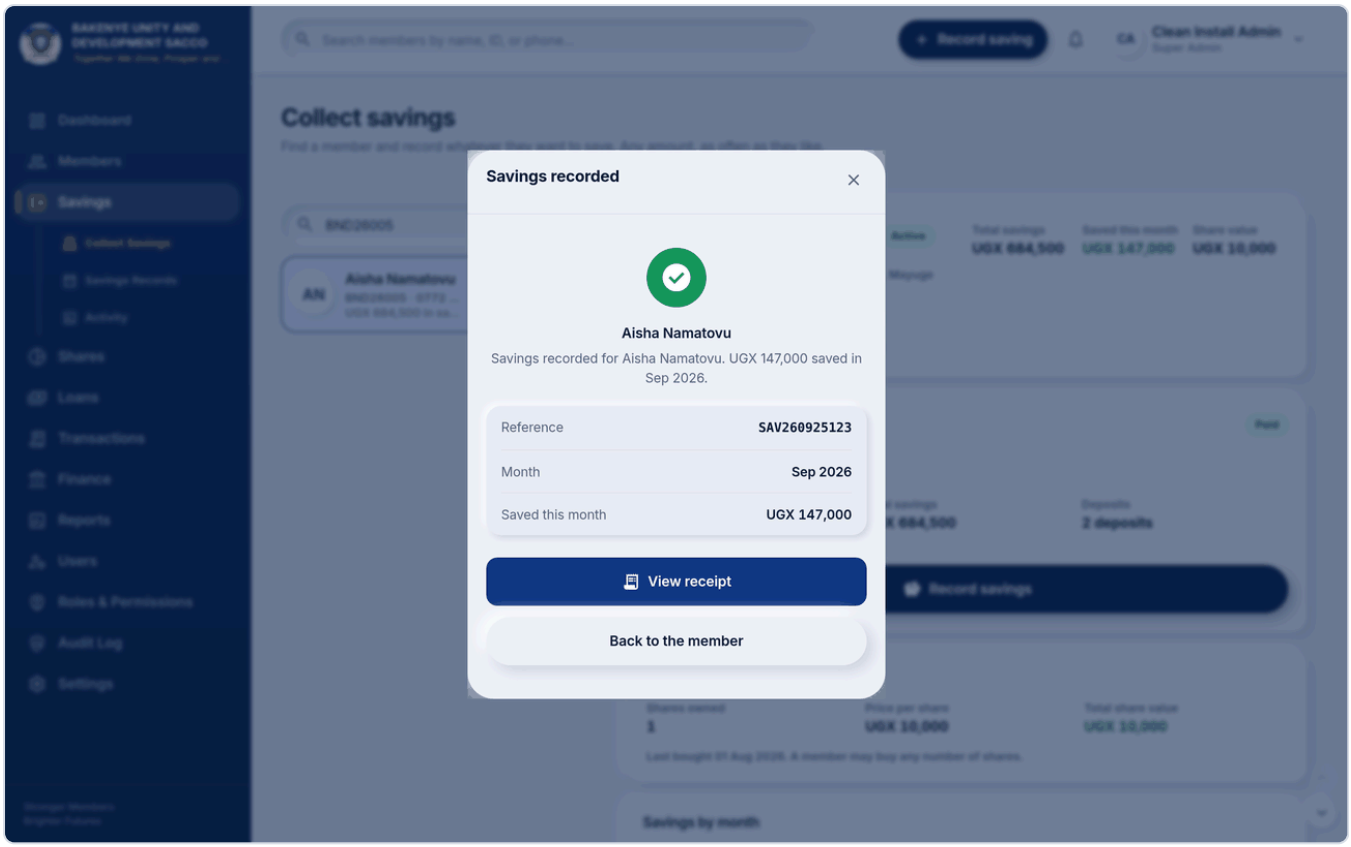

6 Review

Screenshot 30. The confirmation summary. Nothing has been saved yet.

Check the member, the amount and the reference once more. Press **Back** to change anything.

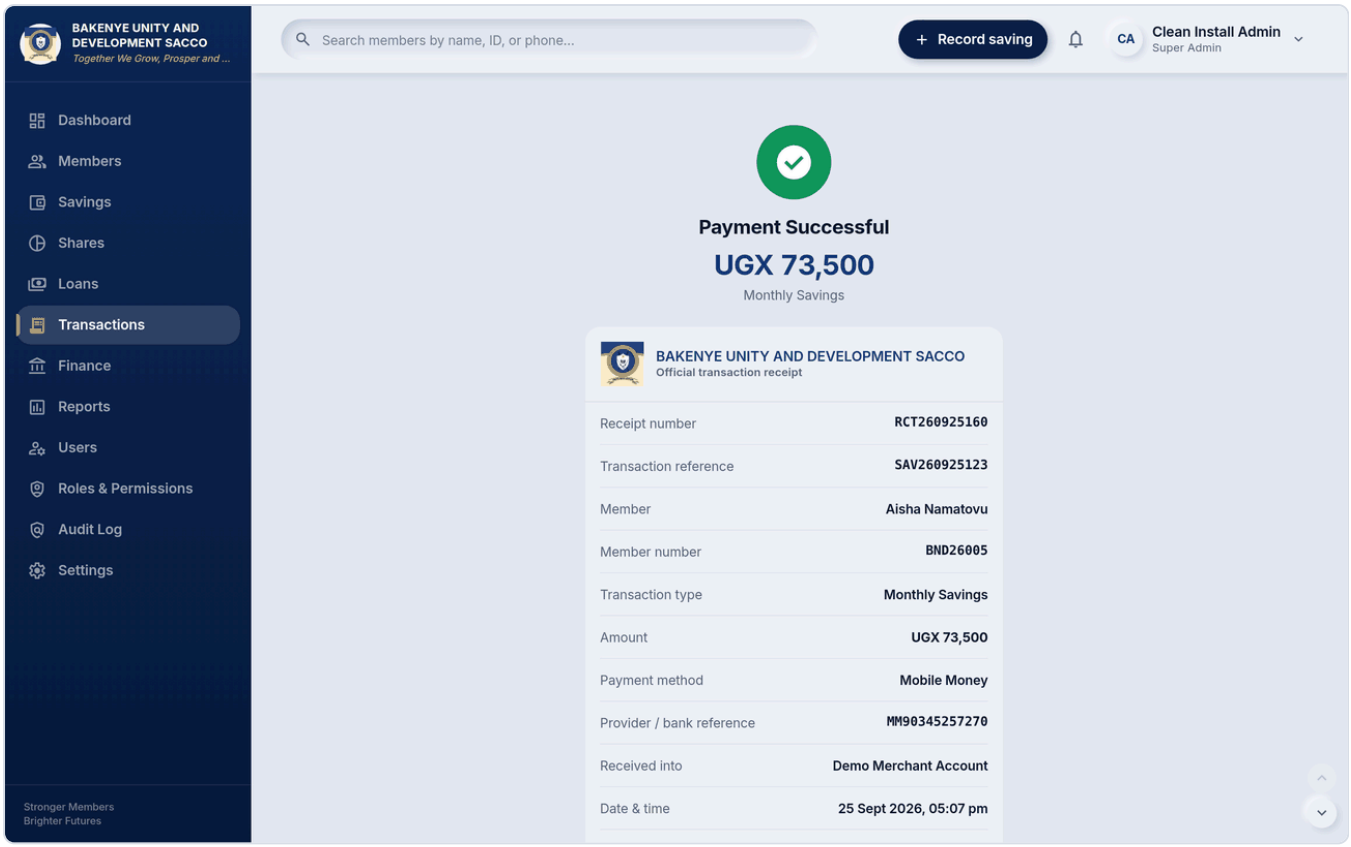

7 Record it

Screenshot 31. The member panel afterwards: the month's total has risen.

Expected result: one entry in the ledger with a **SAV** reference, the member's month recalculated, the money in the right account (mobile money → Cash at Merchant, cash → Cash at Hand, bank → Cash at Bank), and an audit entry in your name.

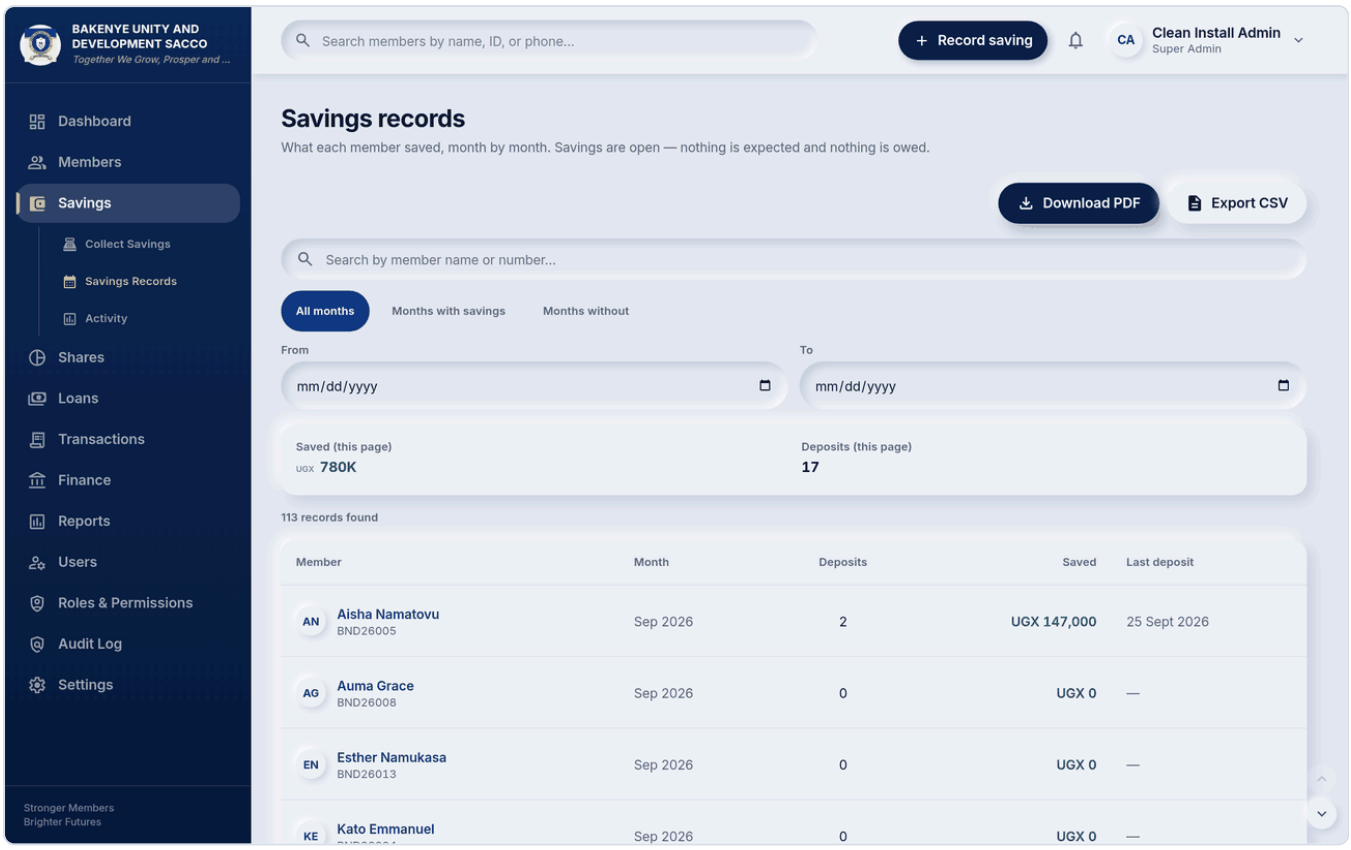

8 Give the member their receipt

Screenshot 32. The receipt, with its receipt number and transaction reference.

It can be printed, saved as a PDF or shown to the member on screen.

Savings records

Screenshot 33. Savings records: every member, month by month, with what they saved.

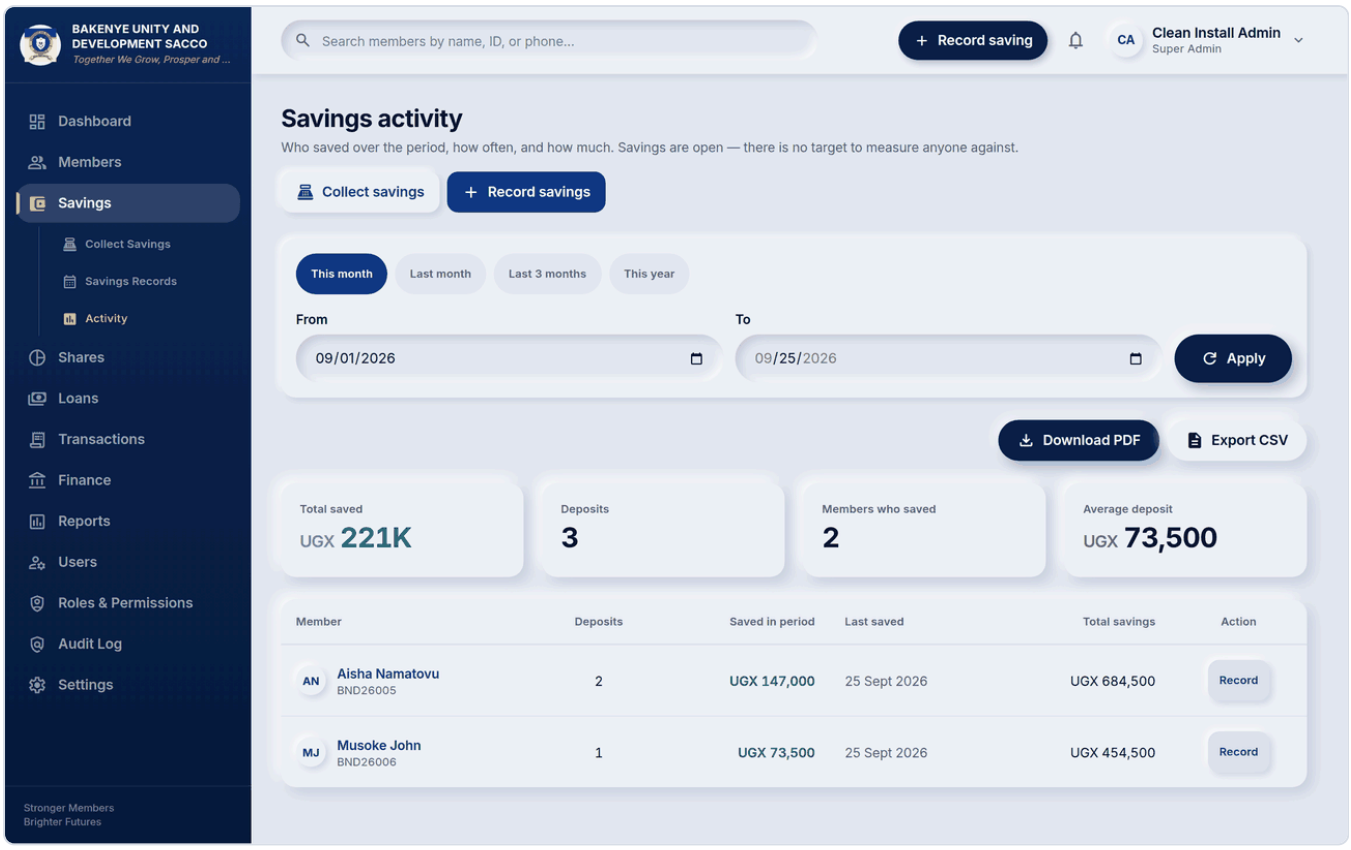

A savings record is one member in one month, holding what they actually saved and how many deposits that was. It is a record of what came in — never a demand for what should have. A month a member did not save in is simply a month with nothing in it.

Filter	What it shows
All months	Every month on record for the members matched.
Months with savings	Months money actually went into.
Months without	Months nothing was saved in. This is not an arrears list: nothing is owed for these months.

> **There are no arrears, and nothing is overdue**
>
> Savings are open, so a member can never be behind on them. Nothing on this screen, on the dashboard or in any report presents a month without a deposit as a debt, and the nightly job no longer marks anything missed.

> **There are no savings waivers any more**
>
> A waiver forgave an amount the SACCO had asked for. Nothing is asked for, so there is nothing to forgive, and the control has been removed. Months waived before the rules changed keep that status for ever, stay closed to further deposits, and keep the manager and the written reason recorded against them. Waiving an unpaid *fee* is a different thing and is unaffected — see Section 5.

Savings activity

Screenshot 34. Savings activity: who saved over the period, how often and how much.

Over any date range: which members saved, how many deposits each made, and how much came in altogether. Every figure is a sum over the ledger, so what this screen shows can never disagree with what members see on their own phones.

> **There is no collection rate any more**
>
> A collection rate measures money received against money expected. Nothing is expected, so the report answers the question that is left: who saved, and how much?

7. Finding the right member before you take money

Almost every serious error in a SACCO's books starts the same way: the money was real, and the member was wrong. This short section is the habit that prevents it.

The check, every time

#	Do this	Why
1	Ask the member for their **member number** — do not offer it.	A member who knows their own number is almost certainly that member.
2	Search by that number, not by name.	Names repeat. BND26006 does not.
3	Read the **name on the screen** back to them.	They will correct you if it is wrong.
4	Check the **phone number** shown matches theirs.	A second, independent check.
5	Read the **outstanding amount** aloud before taking the money.	Members notice when the figure is not what they expected.
6	Count the money, then enter that figure.	Enter what you received, not what was expected.
7	Read the confirmation summary before confirming.	It is the last moment at which nothing has been saved.

> **Two members with similar names**
>
> If a search brings back more than one similar name, do not guess. Open each and compare the phone number and the National ID. If you are still unsure, ask a supervisor.

If you notice the wrong member *before* confirming

Press **Back** or close the form. Nothing has been saved and nothing needs correcting.

If you notice *after* confirming

1. Stop. Do not record a second, opposite payment to cancel it.
2. Write down the transaction reference, the member it went to, the member it should have gone to, and the amount.
3. Tell your supervisor or the manager **the same day**.
4. A Manager, Admin or Super Admin corrects it with a **reversal** (Section 12), and then the payment is recorded against the right member.

A savings payment is corrected by reversal, like any other

Reversing a savings transaction returns the money to the ledger as a reversal entry and puts the savings cycle back to what it was worth before the payment — paid, part paid or pending, worked out again from the payments that remain. Only a Manager, Admin or Super Admin can do it, and the original entry stays on the record.

8. Loans

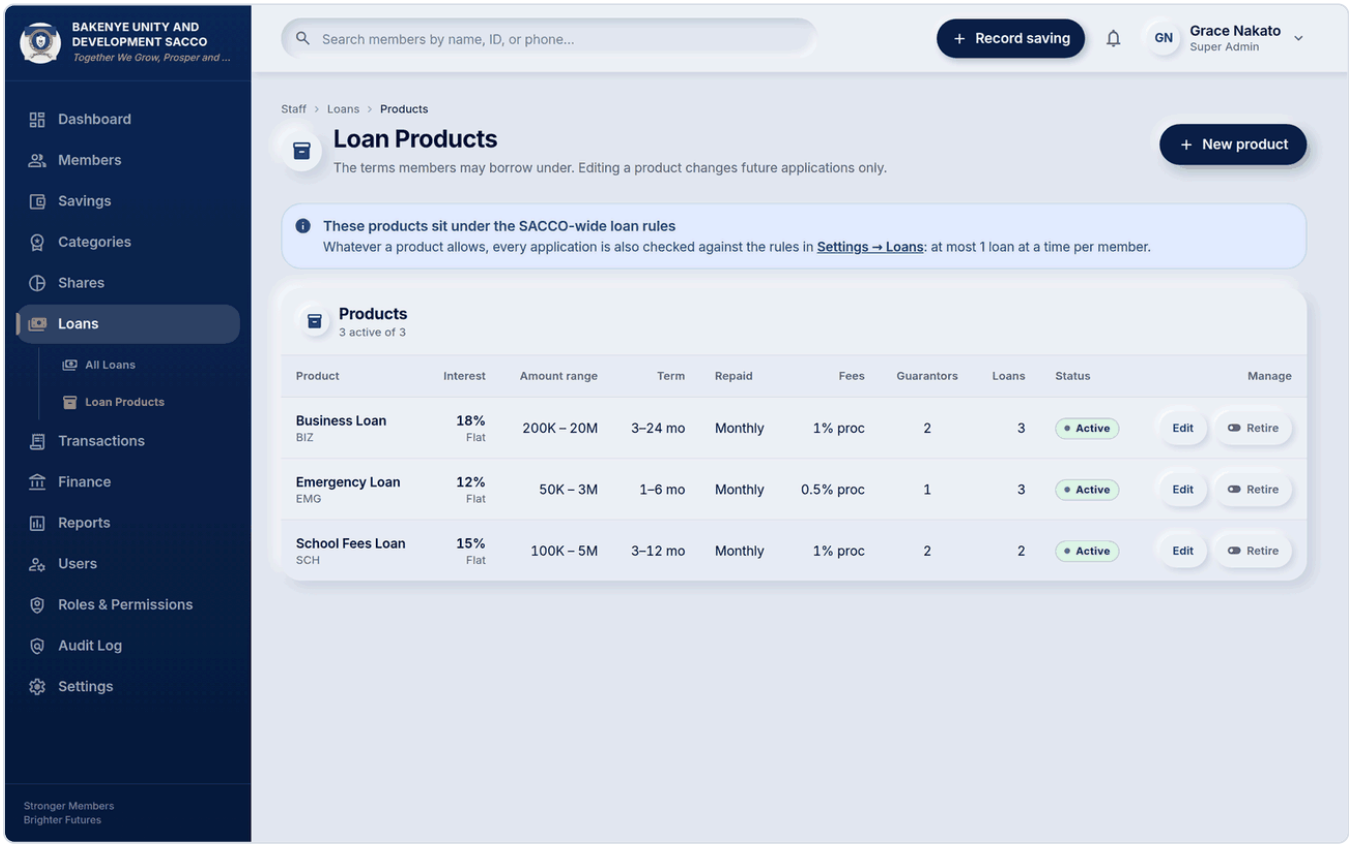

A loan moves through fixed stages, and different roles own different stages. Nobody can skip one.

The stages

Stage	What it means	Who moves it on
Applied	An application has been captured.	Loan Officer or above
Under review	Being assessed.	**Loan Officer** **Manager** **Admin**
Approved	Agreed, money not yet handed over.	**Manager** **Admin** **Super Admin**
Disbursed / Active	Money handed over; repayments due.	**Manager** **Admin** **Super Admin**
Completed	Fully repaid. The system sets this itself.	—
Rejected	Not approved. A reason is recorded.	**Manager** **Admin**
Defaulted	Seriously in arrears. The nightly job flags it.	—

Loan products

Viewing: anybody who may see loans. **Editing:** a role with *Change settings*.

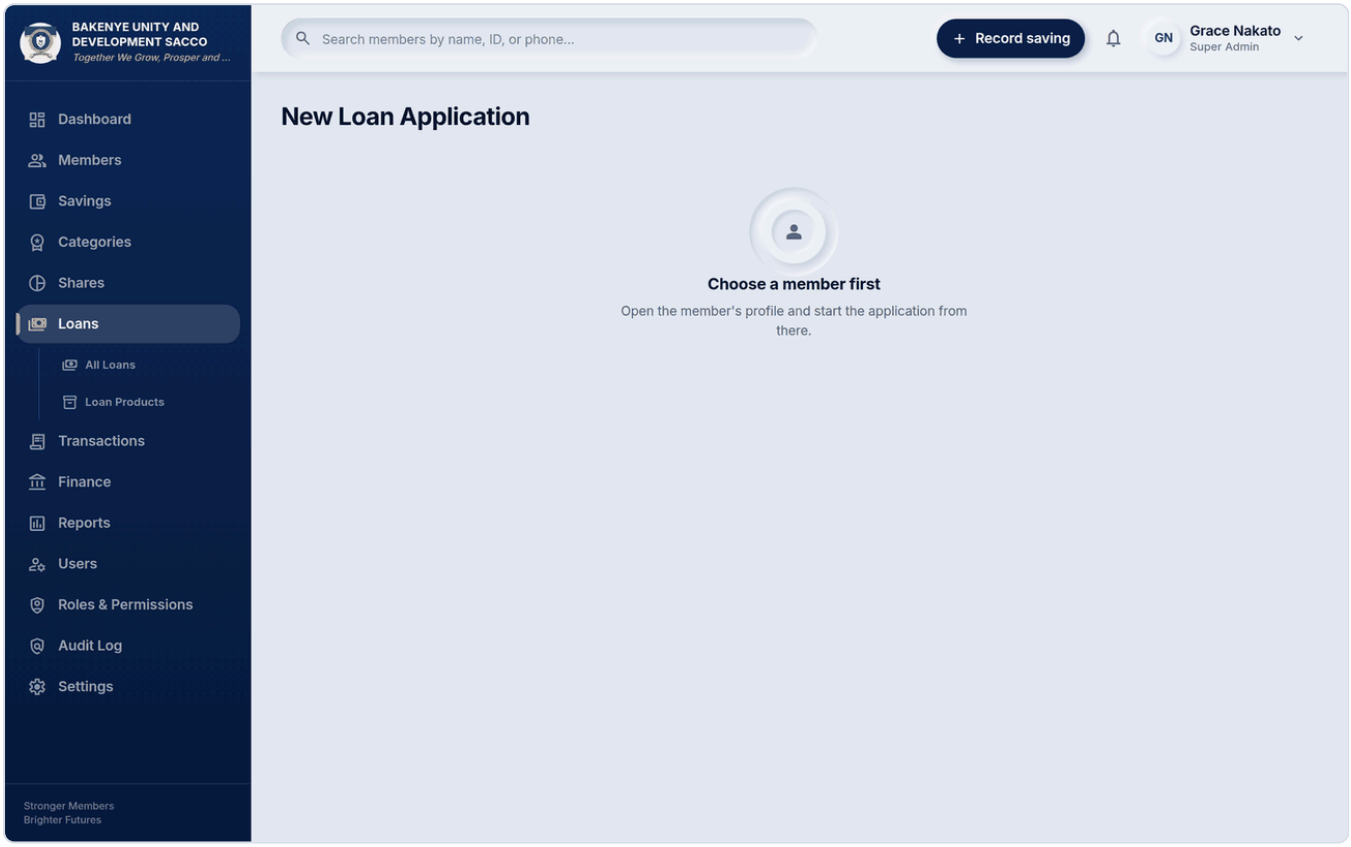

Screenshot 35. Loan products: the terms members may borrow under.

A product carries its name and code, the interest rate and method, the smallest and largest amounts, the shortest and longest terms, any processing fee, and how many guarantors are required. **Every one of these is configuration.** Nothing about a loan's terms is fixed in the software, and this manual does not state the SACCO's rates — read them here.

Capturing an application

Who may do this: Loan Officer · Manager · Admin · Super Admin

Screenshot 36. New Loan Application.

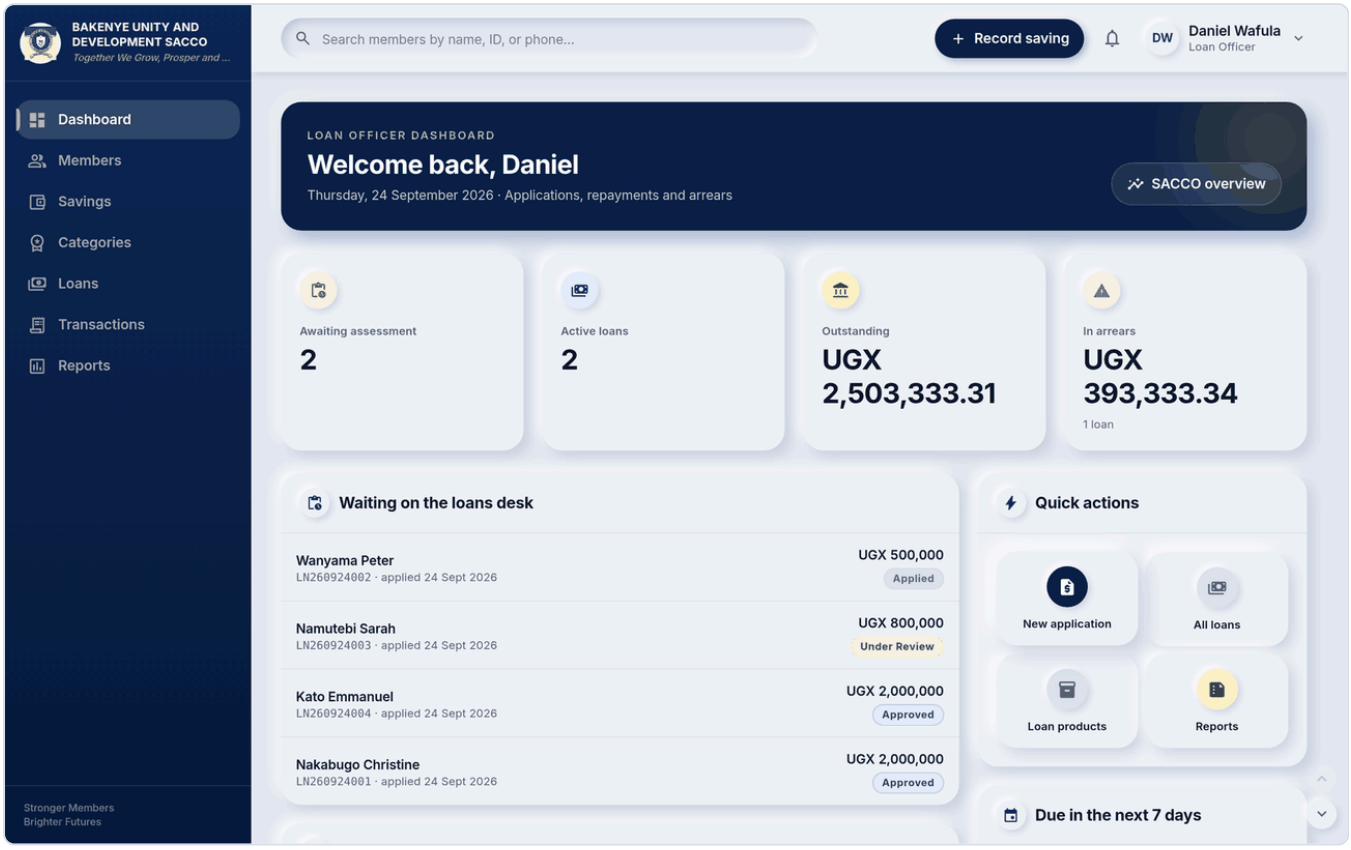

1. Choose the member.
2. Choose the product. The screen shows its limits and refuses an amount outside them.
3. Enter the amount and the number of months.
4. Enter the purpose, and its category.
5. Add the guarantors the product requires. You can search other members by name or number; you will see their name and member number only, never their savings or shares.
6. Submit.

> **One live loan per member**
>
> The system refuses a second application while one is running, and says so at the start rather than after the form has been filled in. This limit is a setting management controls.

Assessing an application

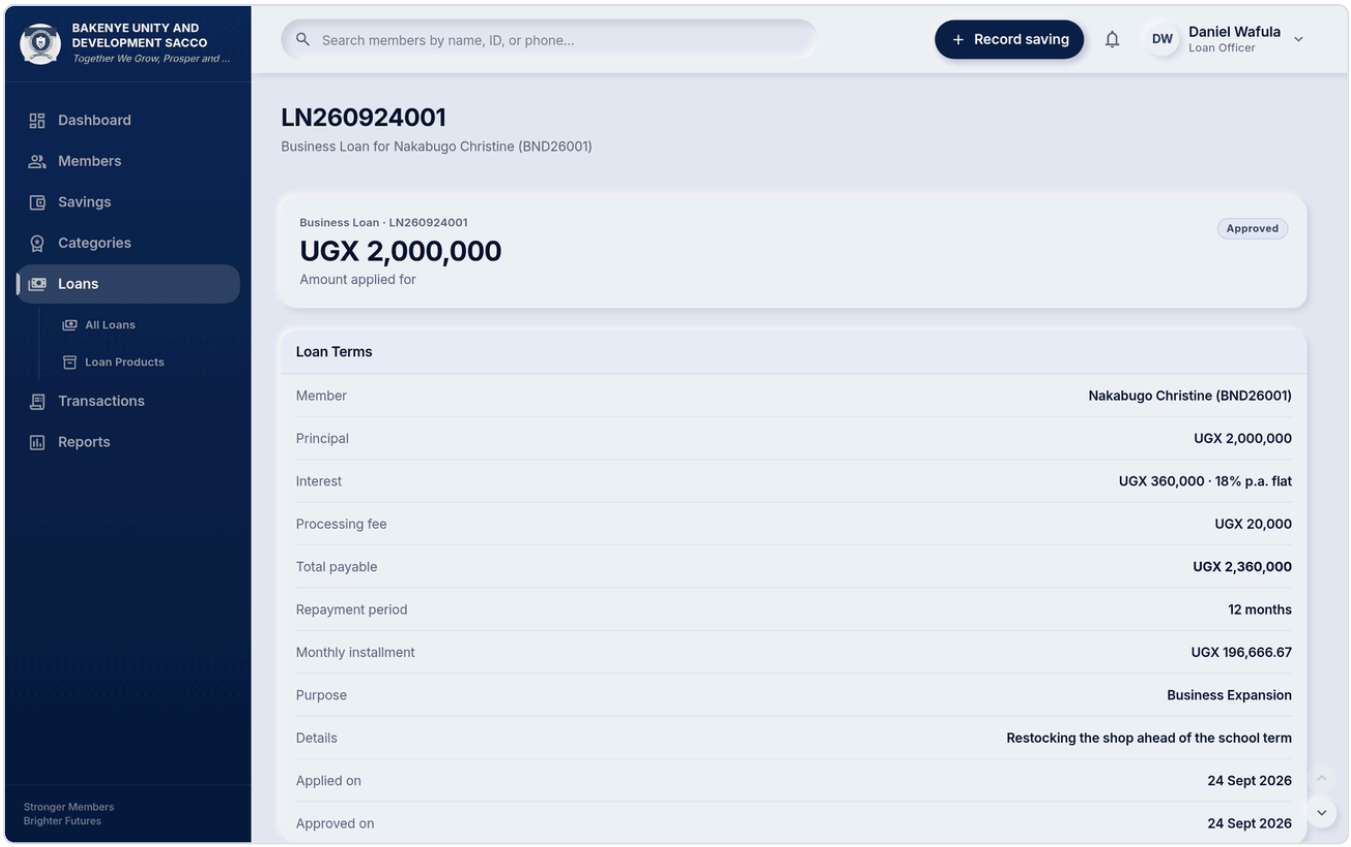

Who may do this: Loan Officer · Manager · Admin · Super Admin

1 Open the Loans desk

Screenshot 37. The Loans desk: what is waiting, what is due, what is late.

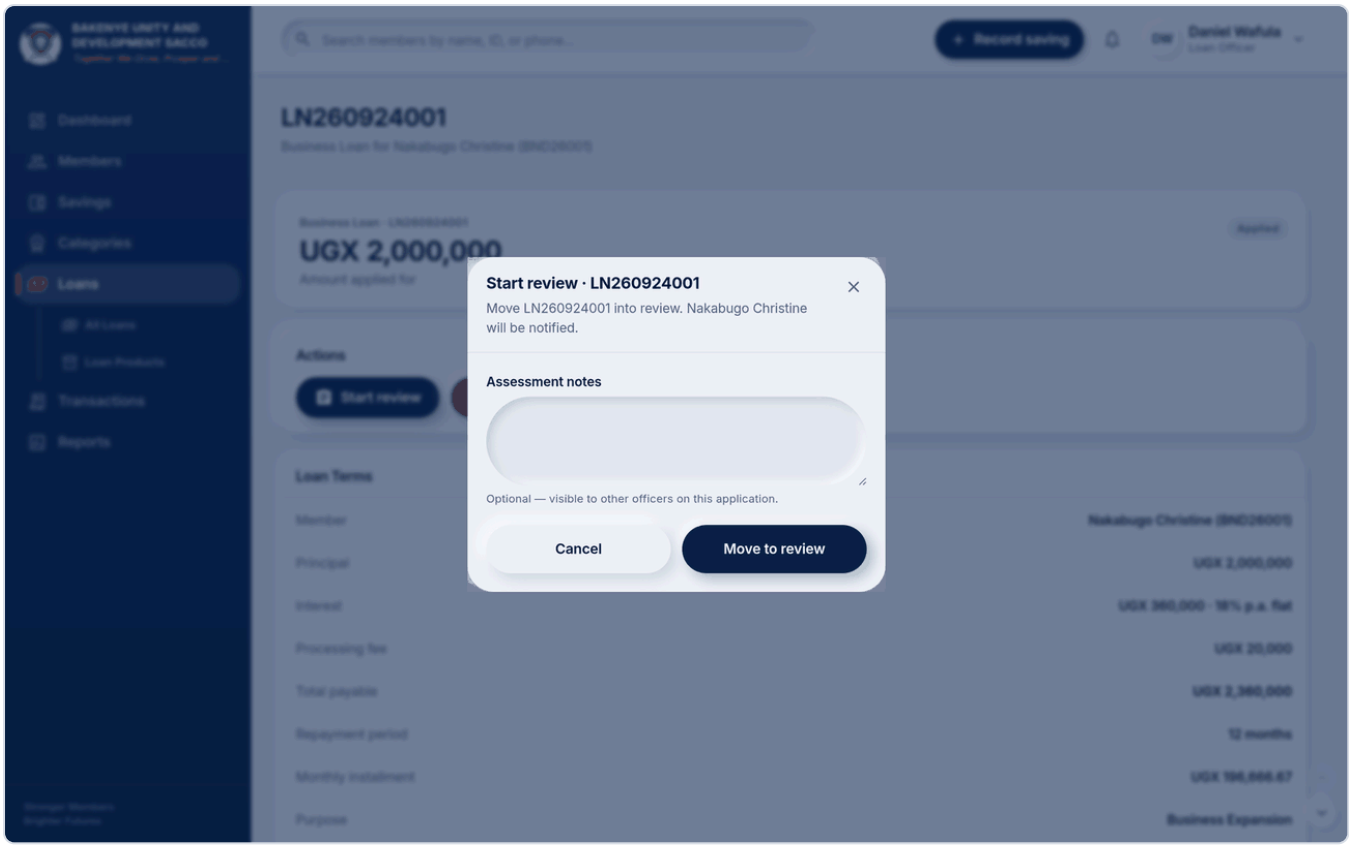

2 Open the application

Screenshot 38. A loan application in full.

Read the amount and term, the purpose, the guarantors and their standing, and the member's own savings and share record.

3 Start the review

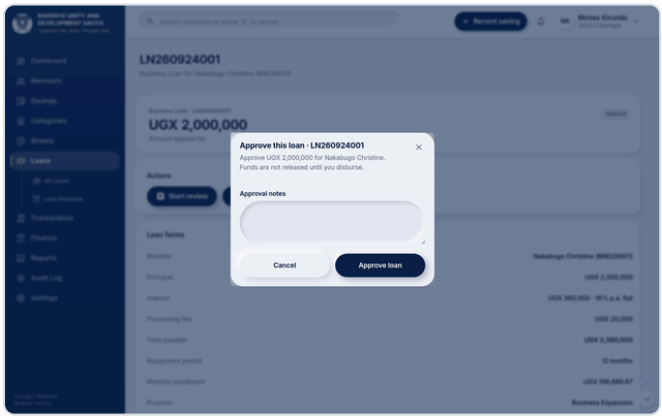

Screenshot 39. The loan after the review has been started.

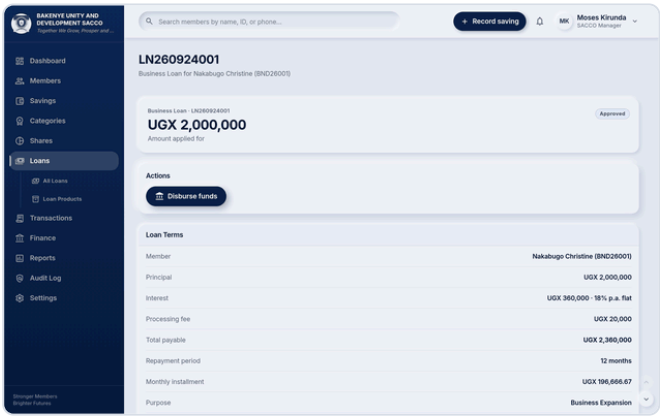

This marks the loan as being worked on, so two officers do not assess the same application.

Approving or declining

Who may do this: **Manager** **Admin** **Super Admin** — never a Loan Officer.

Screenshot 40. Approving. A reason is required.

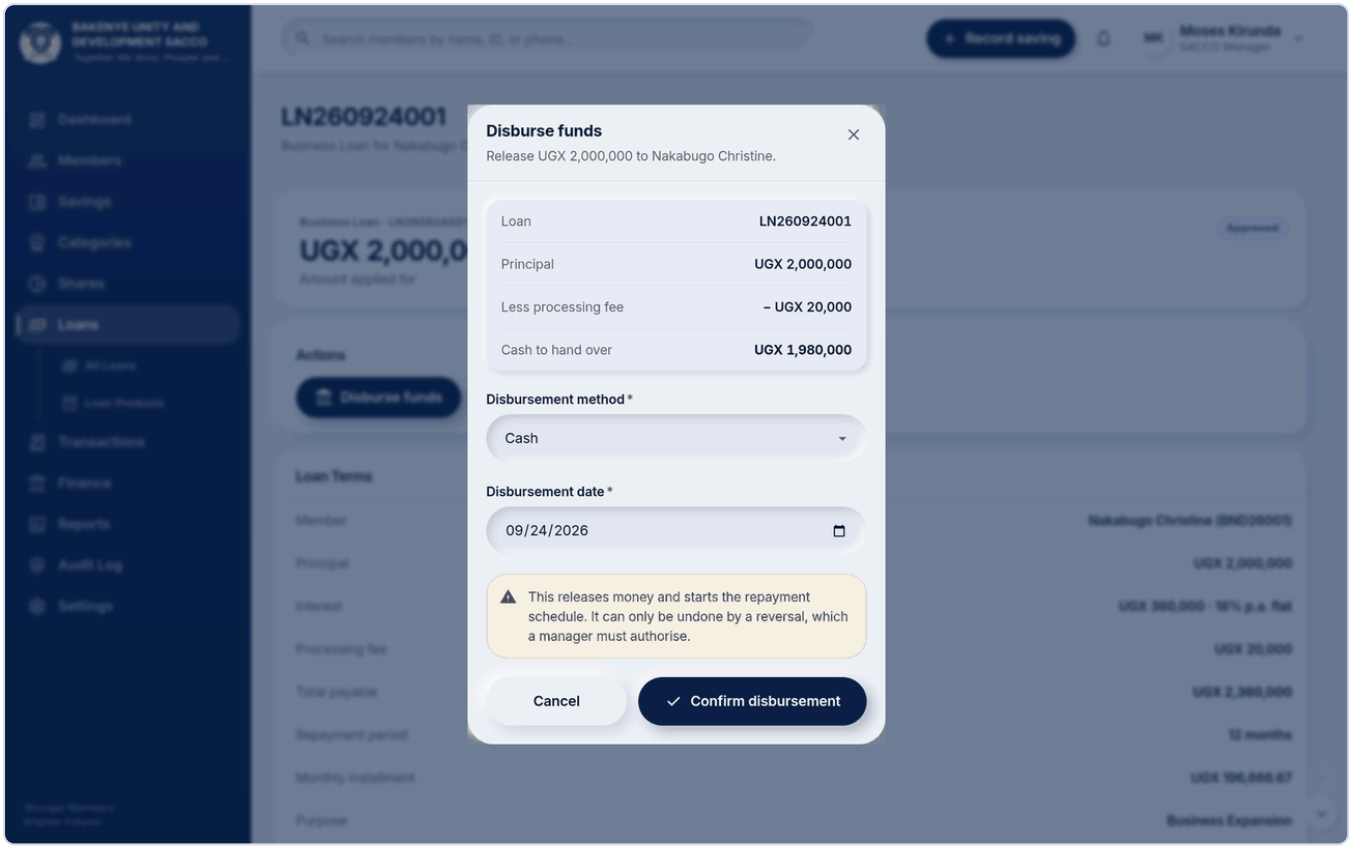

Screenshot 41. Approved, and now offering Disburse funds.

> **Approval is a decision, not a formality**
>
> It is recorded in your name with your reason, permanently. Declining works the same way and the reason matters just as much — it is what the member is told.

Disbursing

Who may do this: Manager · Admin · Super Admin

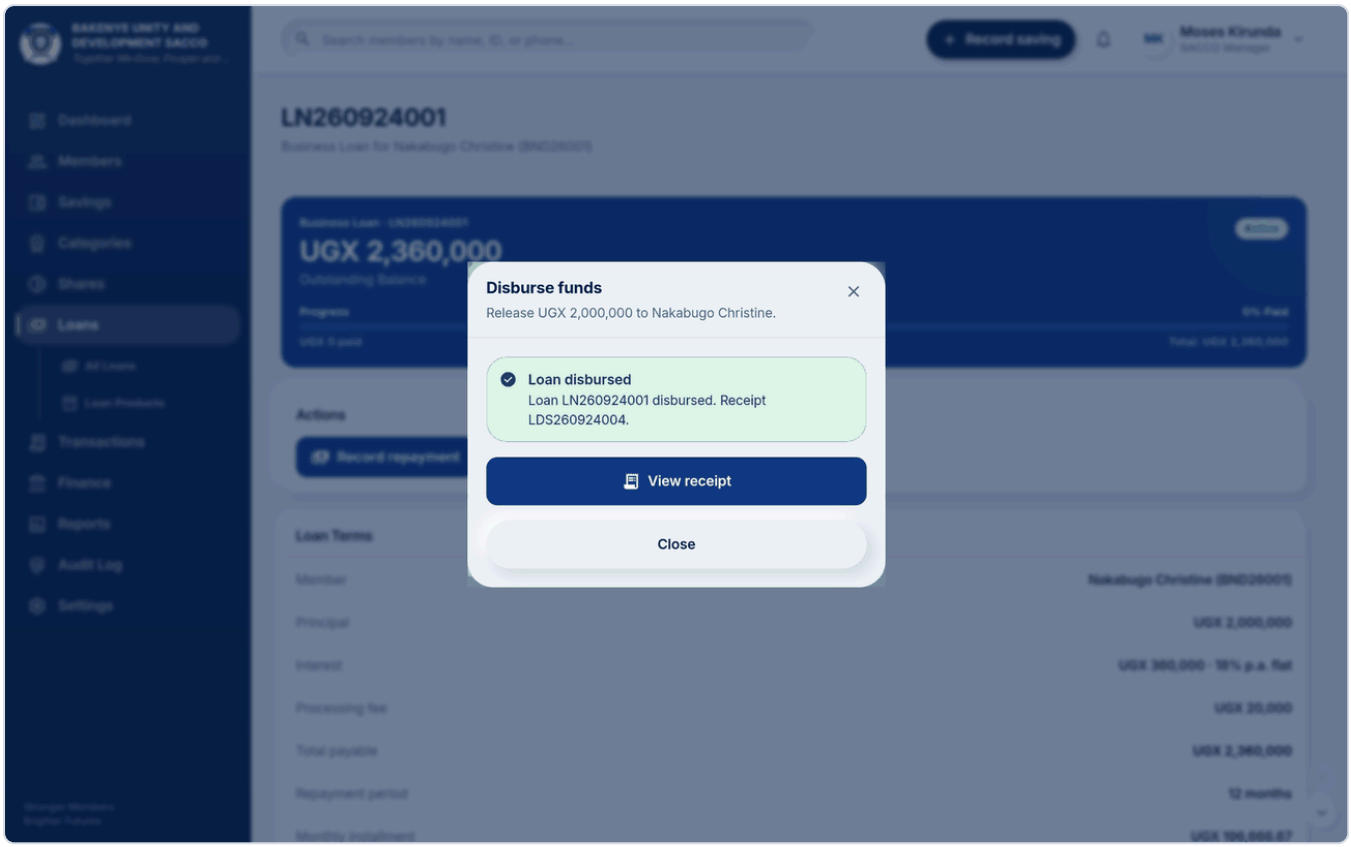

1 Press Disburse funds and say how the money is being handed over

Screenshot 42. The disbursement form: method and date.

The account the money leaves is decided by the method: cash leaves Cash at Hand, a bank transfer leaves Cash at Bank, mobile money leaves Cash at Merchant.

2 Confirm

Screenshot 43. The loan is Active, with its balance and schedule.

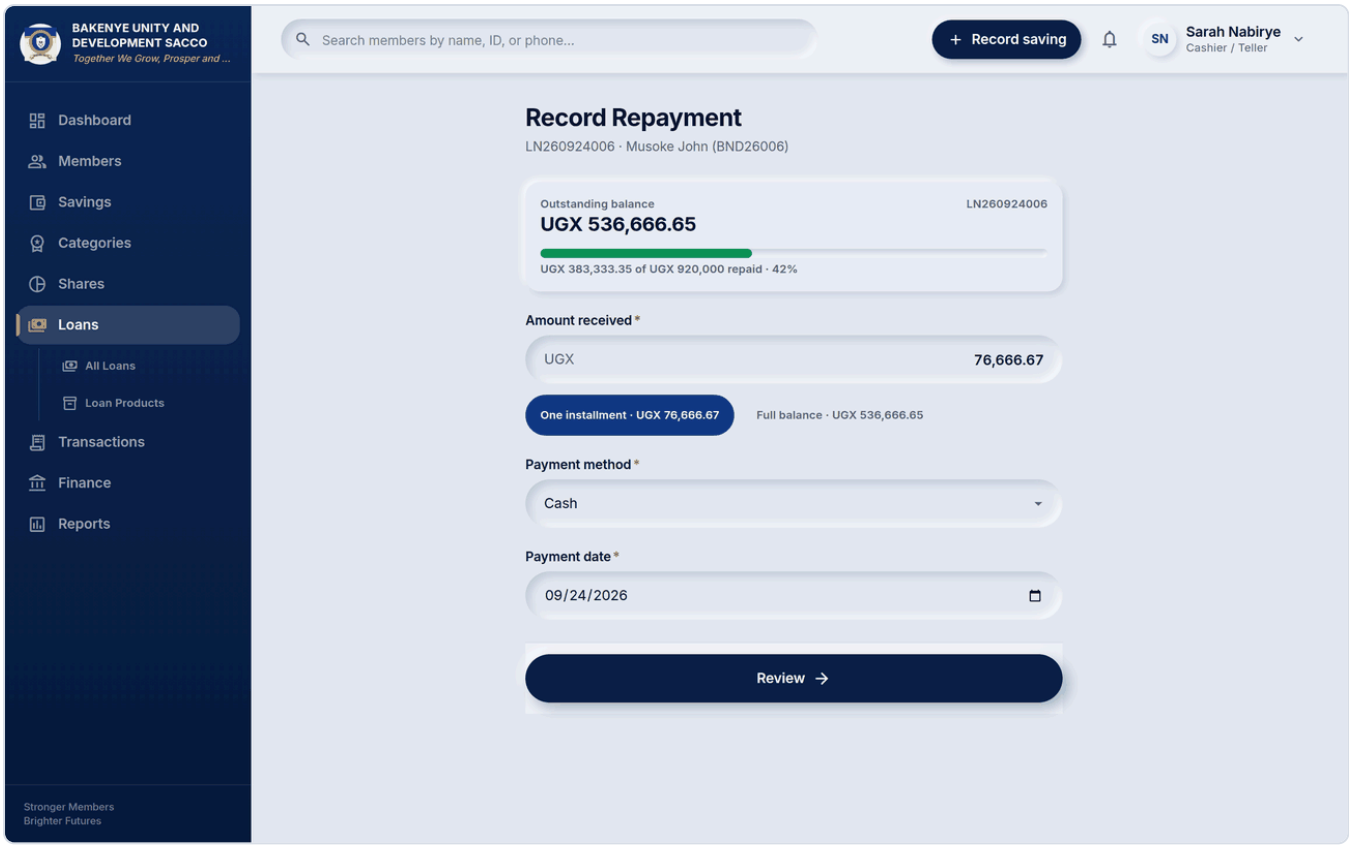

Expected result: a LDS ledger entry, the loan set to Active, the repayment schedule generated, any processing fee charged, and the guarantors' commitments engaged.

> **Only disburse when the money is actually being handed over**
>
> Disbursing moves money out of a SACCO account in the books. If the cash has not left the drawer, the books and the drawer no longer agree.

Recording a repayment

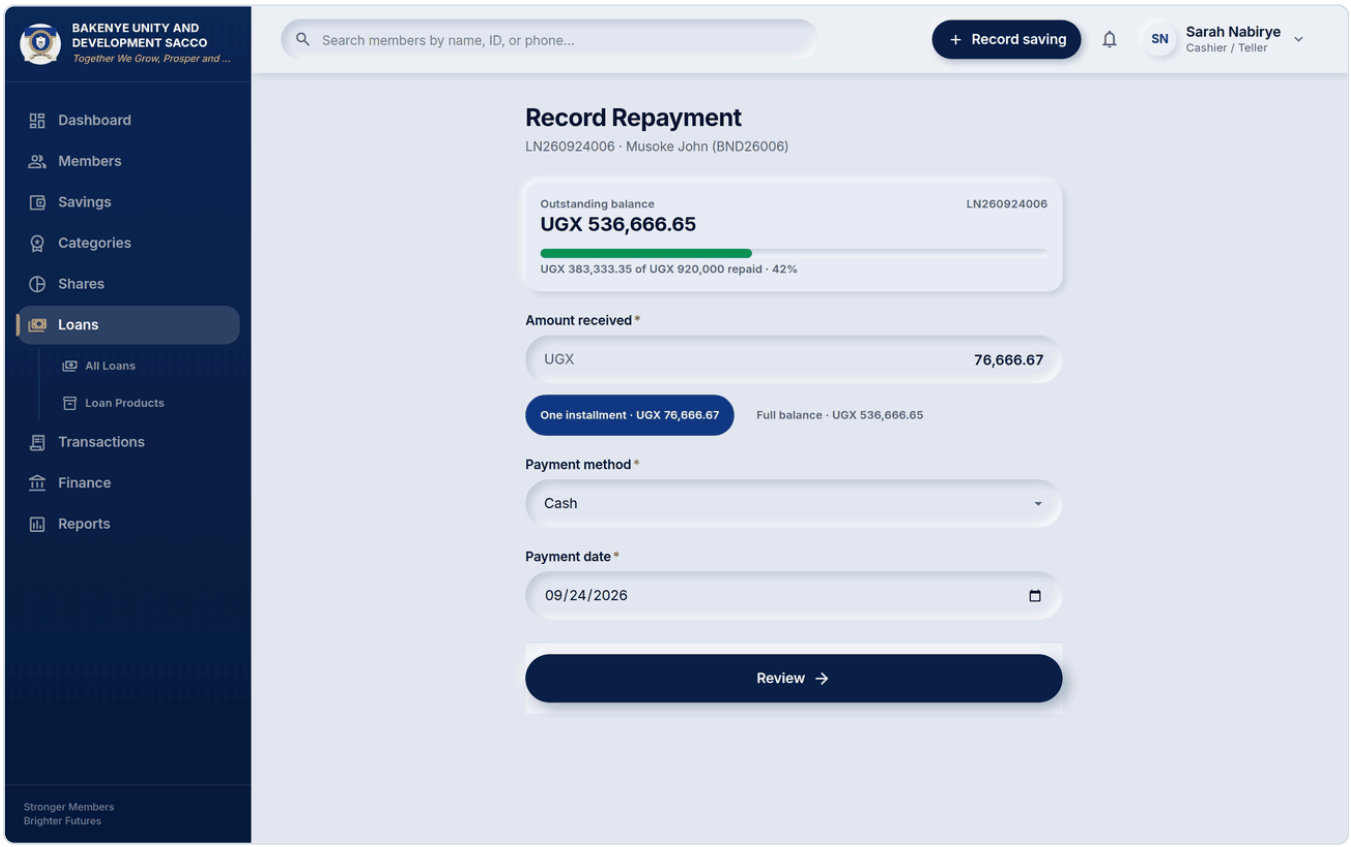

Who may do this: Cashier · Loan Officer · Manager · Admin · Super Admin

1 Open the loan and press Record repayment

Screenshot 44. The repayment screen: outstanding balance and schedule.

2 Type the amount received

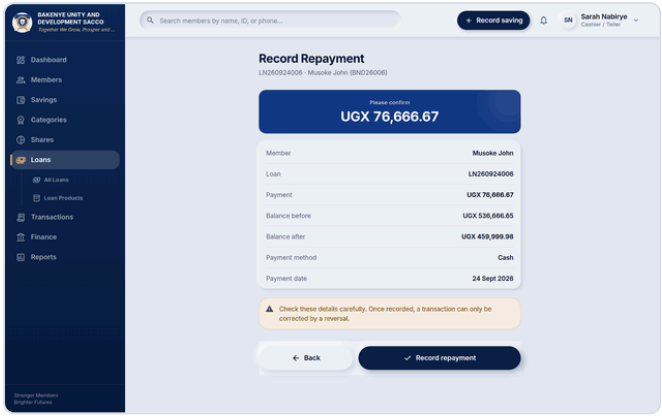

Screenshot 45. The amount typed in and the method chosen.

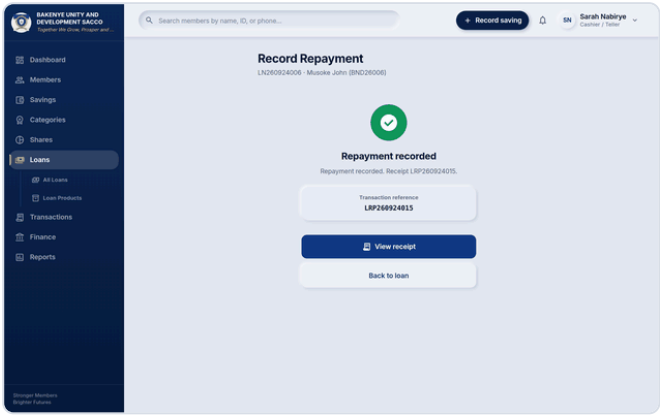

Read the figure in the box before you go on

The *One installment* and *Full balance* shortcuts fill the amount for you, including the cents where an installment is not a whole number of shillings (for example UGX 196,666.67). Read what is in the box against the money in front of you before you continue: the shortcut knows what is owed, not what was handed over.

3 Review and confirm

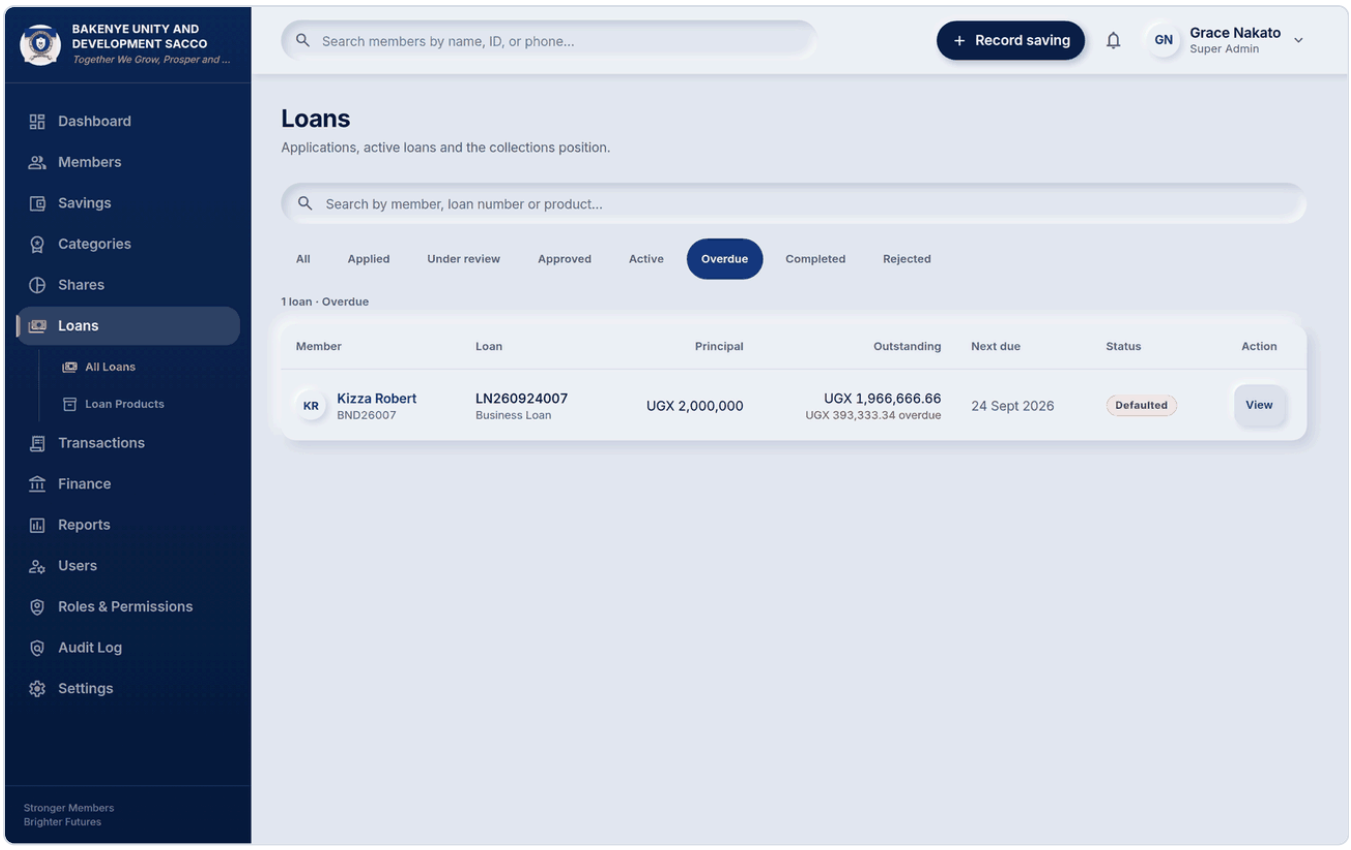

Screenshot 46. The confirmation summary.

Screenshot 47. The result, with the LRP receipt reference.

Expected result: a **LRP** ledger entry, the money applied to **interest first and then principal**, the schedule and balance recalculated, and — if that was the last of it — the loan marked Completed and its guarantors released.

Overdue loans and collections

Screenshot 48. Loans in arrears.

Filter the Loans screen by **Overdue** to see the loans behind on their schedule, with the member, the amount in arrears and how far behind they are. Open a loan to find the member's phone number and their repayment history.

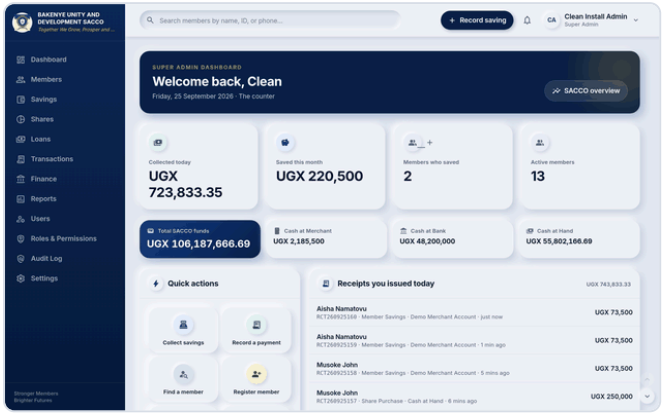

A collection is recorded exactly like any other repayment, using the screen above. If the money was collected some days ago, set the **payment date** to the day it was received — the reference number will carry today's date, and the entry will be dated the day of collection.

> **Money collected but not yet recorded**
>
> Record it as soon as you are back at a computer, with the correct date and, if you issued a manual receipt, its number in the note. Do not leave collected money unrecorded overnight; and never record a collection you have not actually received.

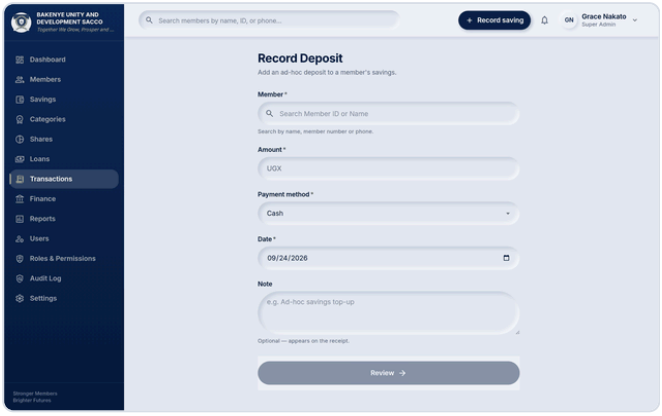

9. Deposits, withdrawals and the cashier desk

Beyond scheduled savings, the counter also takes ordinary deposits and pays out withdrawals.

Who may do this: Cashier · Manager · Admin · Super Admin

Screenshot 49. The Cashier desk: today's collections and the quick actions.

Screenshot 50. Record Deposit.

Recording a deposit

1. Open **Transactions** → **Record Deposit**, or use the quick action on your desk.
2. Find the member and check the name and number.
3. Enter the amount you counted and the method.
4. For mobile money or bank, type the confirmation reference.
5. Review, confirm, and give the member their receipt.

Recording a withdrawal

The same screen, choosing **Withdraw**.

> **Checks the system applies to a withdrawal**
>
> It refuses to take a member below the minimum savings balance management has set, and it refuses to take a SACCO account below zero unless management allows it. Both limits are settings, not fixed rules.

> **Count the money out in front of the member**
>
> And have them confirm the amount before you confirm on the screen.

Fees

Collecting a fee: Cashier · Manager · Admin. **Creating a fee:** Manager · Admin · Super Admin.

Fees a member owes are shown on their own page and can be collected from there. A fee charged to a member keeps the name and amount it had on the day it was charged, so raising a fee later never changes

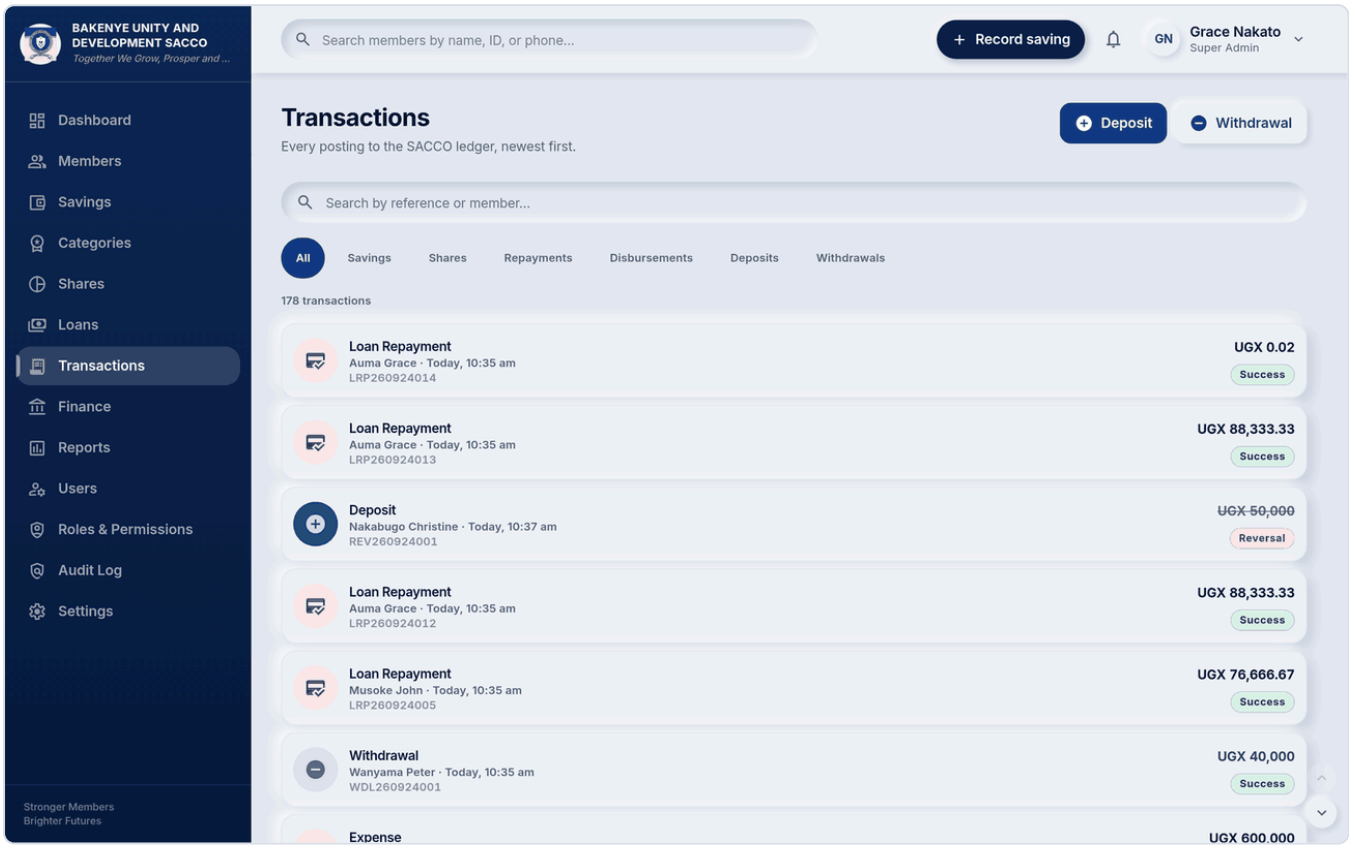

an earlier receipt.

10. Transactions and corrections

One ledger holds every money movement in the SACCO. It cannot be edited. This section is how to read it, and how a mistake is put right.

The transaction register

Viewing: every staff role.

Screenshot 51. The transaction register, with its filters.

Filter by date, by type, by payment method or by status, and search by reference, member number or member name.

Reference numbers

Every entry carries a reference of a fixed shape: three letters, the date, and that day's sequence for that kind of document.

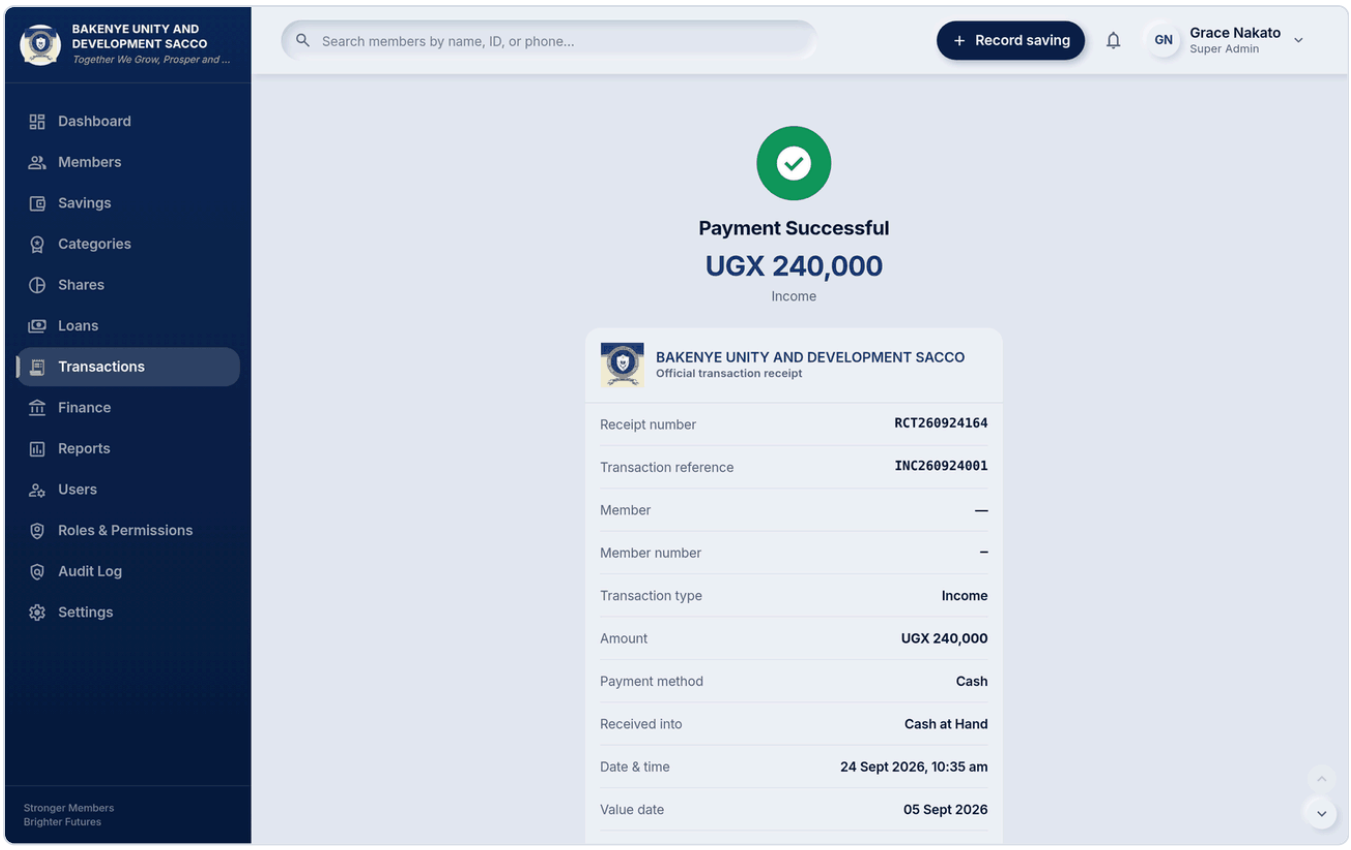

Prefix	Document	Example
SAV	Savings	SAV260924133
SHR	Shares	SHR260924013
LRP	Loan repayment	LRP260924015

Prefix	Document	Example
LDS	Loan disbursement	LDS260924002
RCT	Receipt	RCT260924168
PAY / EXP	Payment / expense	EXP260924006
INC	Income	INC260924004
TRF	Transfer between accounts	TRF260924001
DEP / WDL	Bank deposit / withdrawal	DEP260924001
FEE	Fee	FEE260924003
REV	Reversal	REV260924001
REC	Reconciliation	REC260924001

Reading SAV260924133: a savings entry, issued on 24 September 2026, the 133rd savings document that day.

> **The date in the reference is the day it was issued**
>
> Not the day it is accounted for. A payment recorded today for money received last Friday carries today's reference and Friday's payment date. Both are on the face of it.

Opening a transaction

Screenshot 52. One transaction: the full receipt, and who recorded it.

The detail shows the member, the amount, the method, the provider or bank reference, which account the money went into, the date and time, who recorded it, and the status.

Correcting a mistake: reversal

Who may reverse: **Manager** **Admin** **Super Admin** only.

> **A posted transaction cannot be edited or deleted**
>
> Not by a cashier, not by a manager, not by an administrator, and not by anyone with access to the database. The only correction is a reversal.

What a reversal does:

- writes a new, opposite entry with a **REV** reference;
- marks the original *Reversed* and links the two;
- rolls back the balances, schedules and account movements it affected;
- records the reason, which is required;
- leaves both entries visible to the member and to staff for good.

How to reverse:

1. Open the transaction from the register.

2. Press **Reverse**.
3. Type a reason that explains what actually happened — a person reading it in a year’s time should understand it without asking you.
4. Confirm.
5. If the money now needs to go somewhere else, record that as a new transaction, correctly.

What a reversal puts back

A reversal does not only undo the money. A reversed savings payment also returns the savings cycle to its earlier state — paid, part paid or pending, recalculated from the payments that are left. A reversed loan repayment puts the schedule and the outstanding balance back. You do not need to adjust any of that by hand.

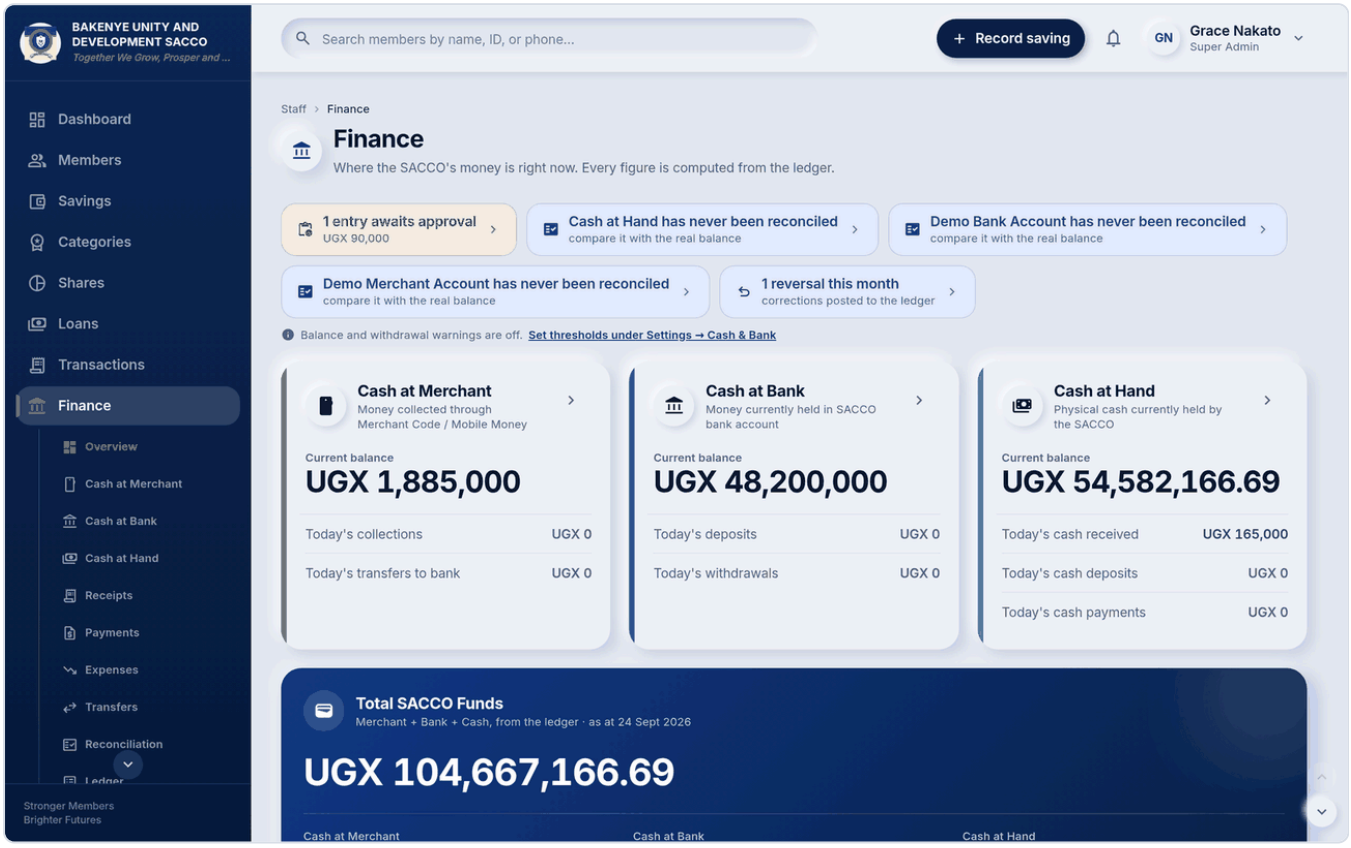

Never correct an error with an opposite entry

Recording a matching withdrawal to cancel a wrong deposit leaves both on the member’s record with no link between them and no reason. The balance may come out right; the record becomes untrue.

11. Finance: Cash at Merchant, Cash at Bank, Cash at Hand

The SACCO's money sits in three kinds of place, and the system keeps them apart.

Viewing: Cashier Accountant Manager Admin. **Setting accounts up:** Manager Admin Super Admin.

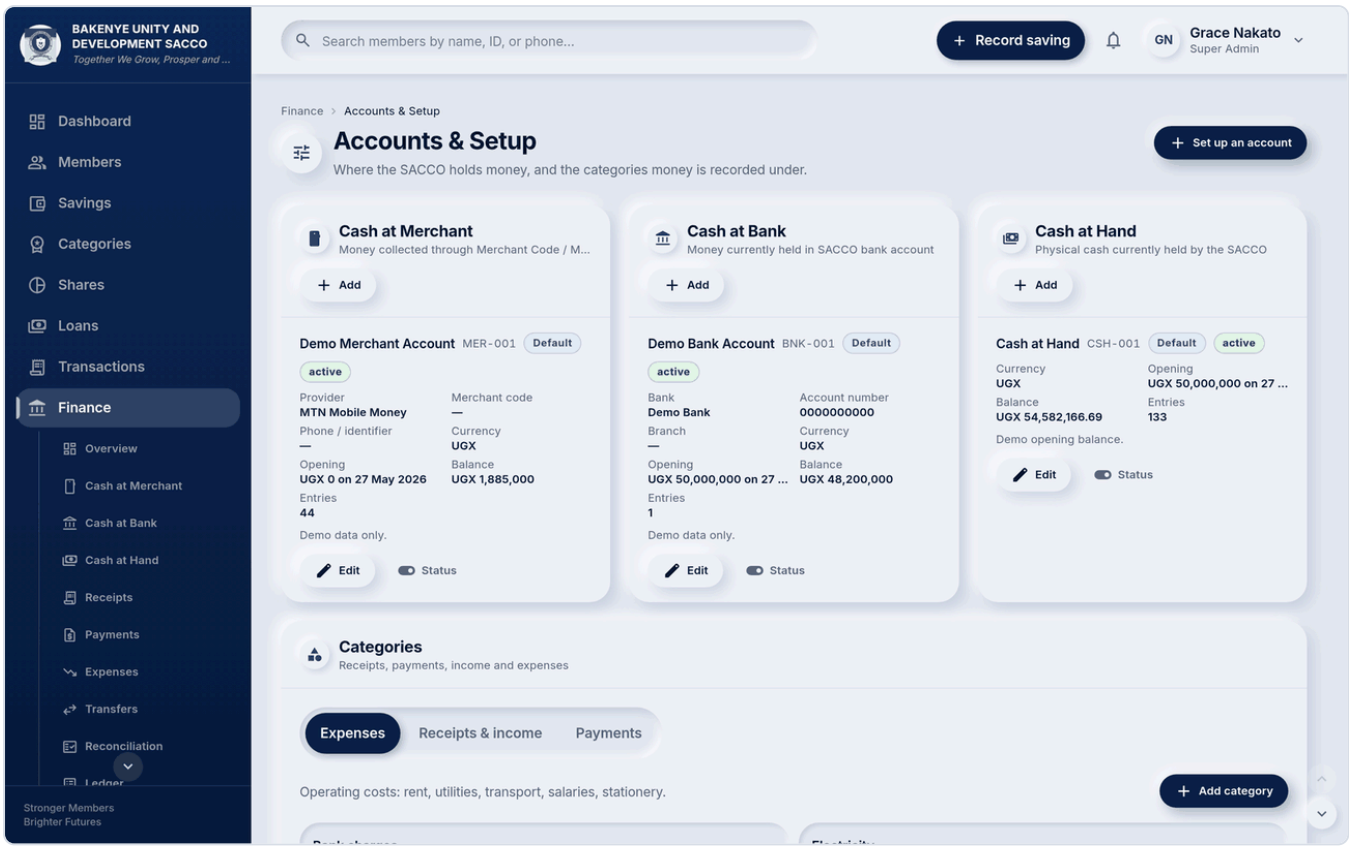

Screenshot 53. The Finance overview: what is in each account.

Account	What it holds	What goes into it
Cash at Merchant	The SACCO's mobile-money wallet.	Anything recorded as Mobile Money.
Cash at Bank	The SACCO's bank account(s).	Anything recorded as a bank transfer or cheque.
Cash at Hand	Physical cash at the office.	Anything recorded as Cash.

A system record is not the same as the real account

These figures are what has been *recorded*. Whether they match the real wallet, the real bank statement and the real cash box is what **reconciliation** is for (below). The system does not check the outside world for you.

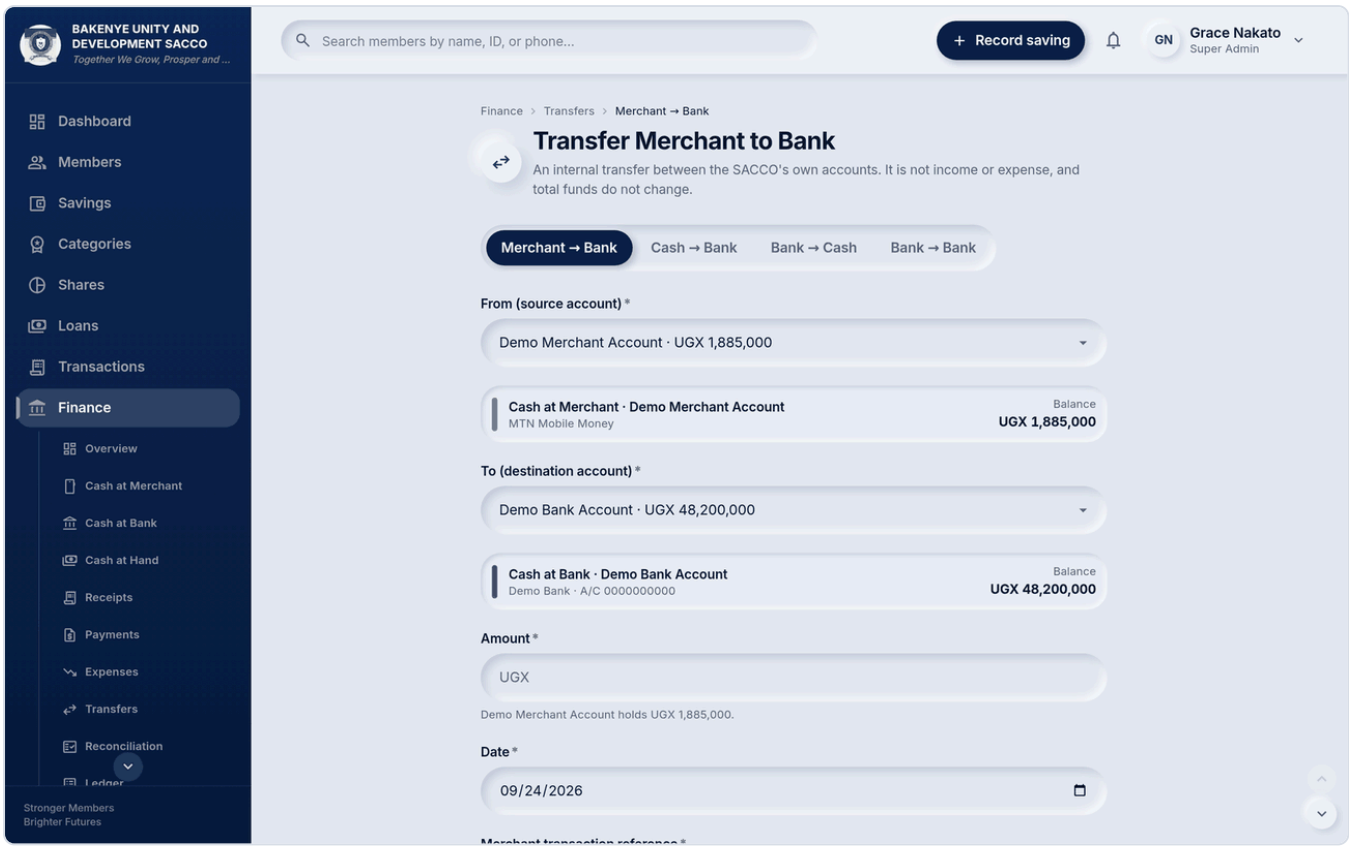

Setting up accounts

Screenshot 54. Accounts & Setup.

A merchant account needs its provider and merchant code; a bank account needs the bank and the account number. Until a manager creates them, the Finance screens say so rather than inventing one. Only a zero-balance *Cash at Hand* account exists to begin with.

Moving money between accounts

Screenshot 55. Recording a transfer, for example Merchant to Bank.

Merchant → Bank, Cash → Bank, Bank → Cash and Bank → Bank are all **transfers**. A transfer is one entry that takes money out of one account and puts it into another.

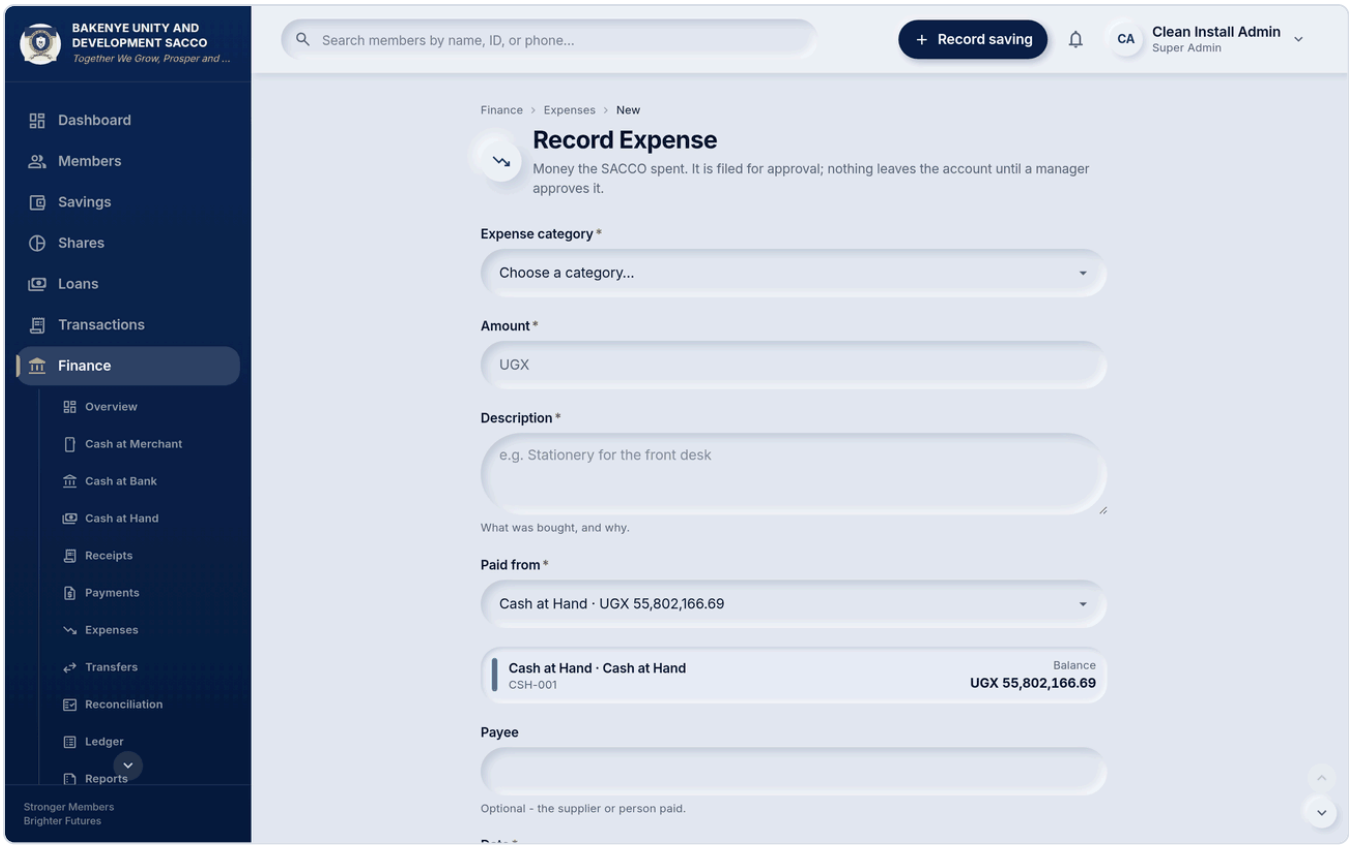

> **A transfer is not income and not an expense**
>
> Total SACCO funds do not change. Transfers are deliberately left out of the cashbook and the Receipts & Payments report, so that moving your own money between your own accounts never looks like trading.

> **Transfers may need approval**
>
> If management has switched on *Transfers and payments need approval*, a transfer recorded by somebody who cannot approve it waits for a manager. There may also be an amount above which approval is always needed, and a four-eyes rule under which a second person always approves.

Income and expenses

Recording: Cashier Accountant Manager Admin. **Approving:** Manager Admin Super Admin.

1 Finance → Expenses → Record expense

Screenshot 56. The expense form.

Category (required)
From the SACCO's own list of expense categories.

Amount (required)
What was actually spent.

Description (required)
What the money was for, in plain words.

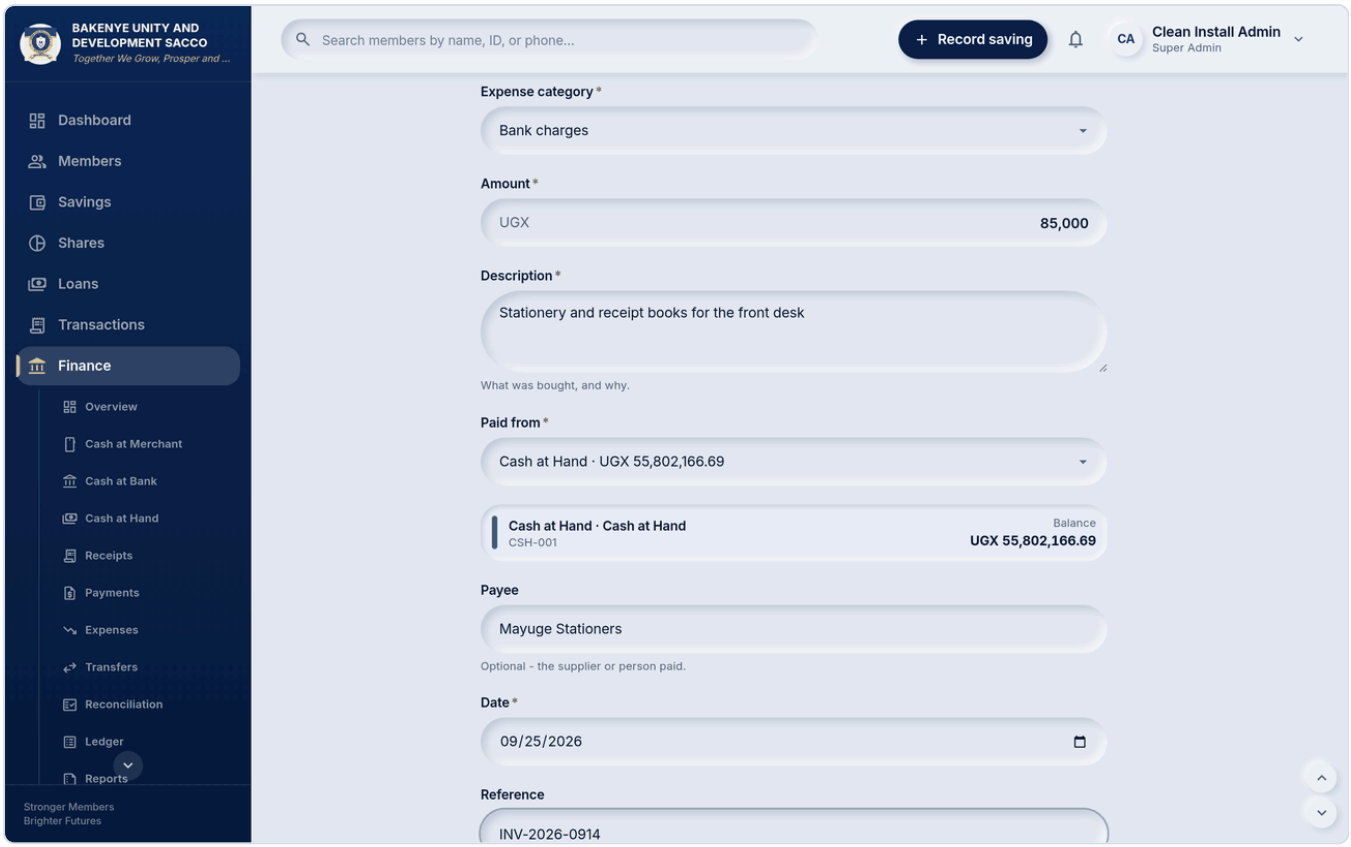

Paid from (required)
Which account the money leaves.

Payee
Who was paid.

Date
When it was spent.

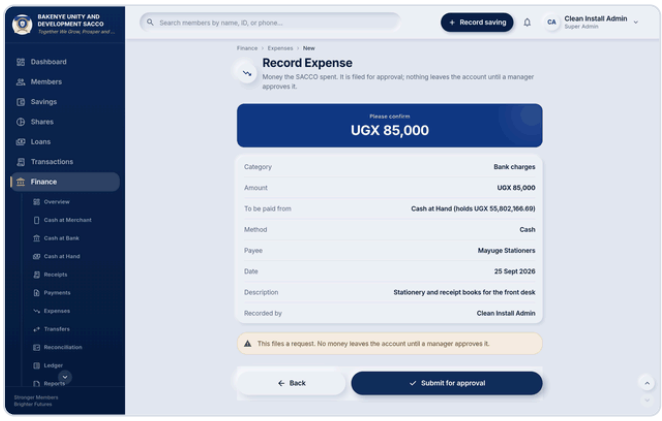

Reference
The supplier's invoice or receipt number.

Supporting document
An attachment. **This was not verified for this manual** and is not described as a working step.

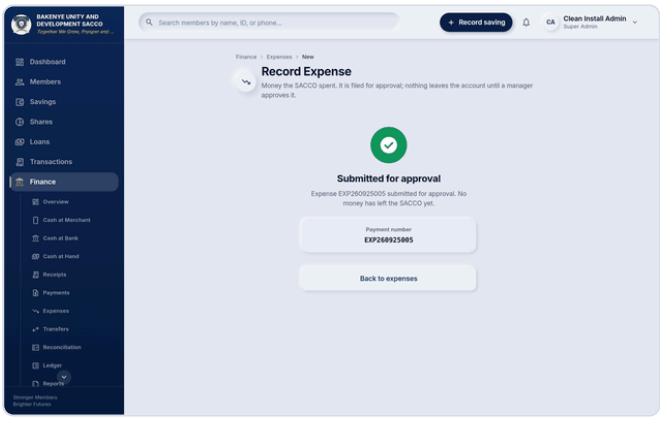

Screenshot 57. An expense, filled in.

2 Review, then file it

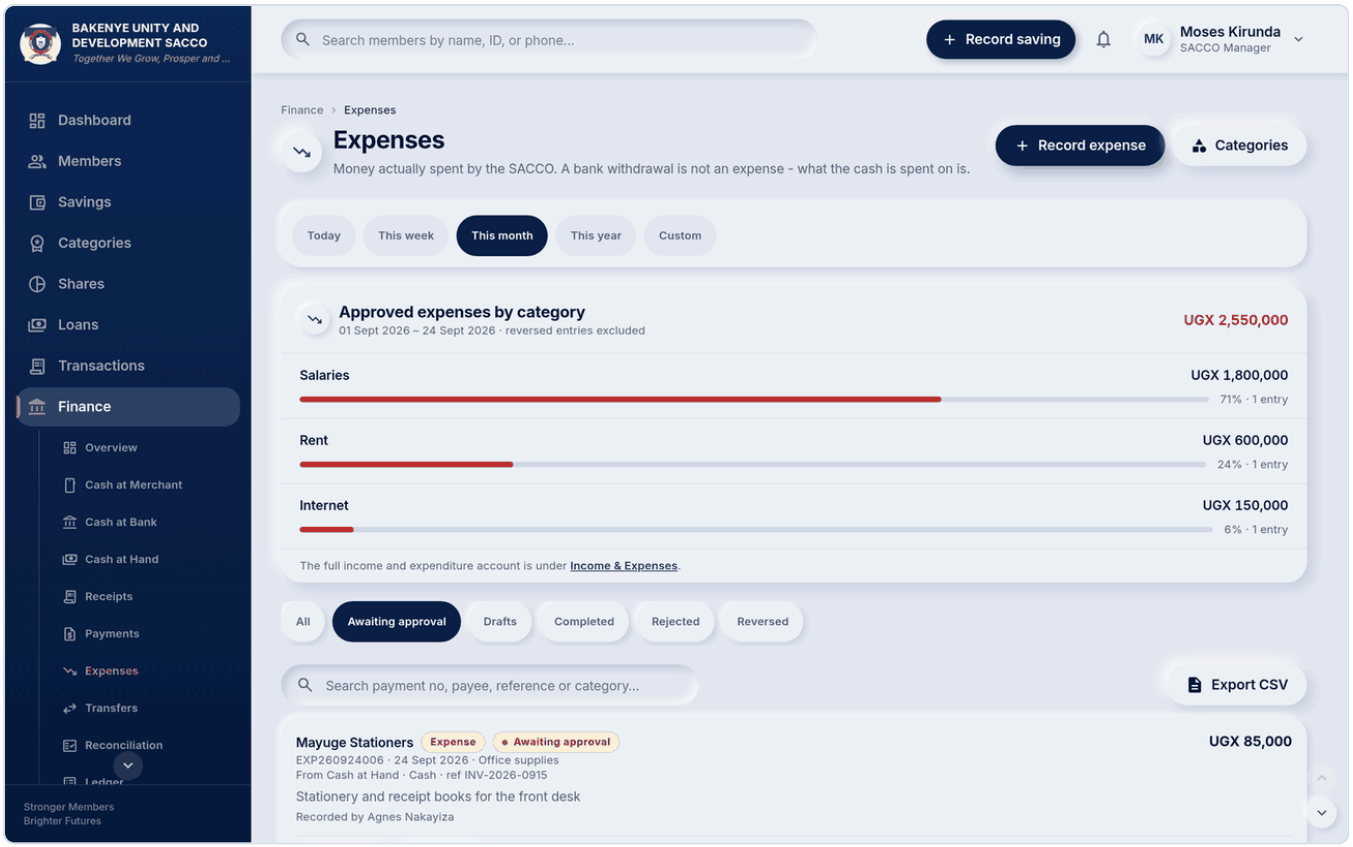

Screenshot 58. The confirmation summary.

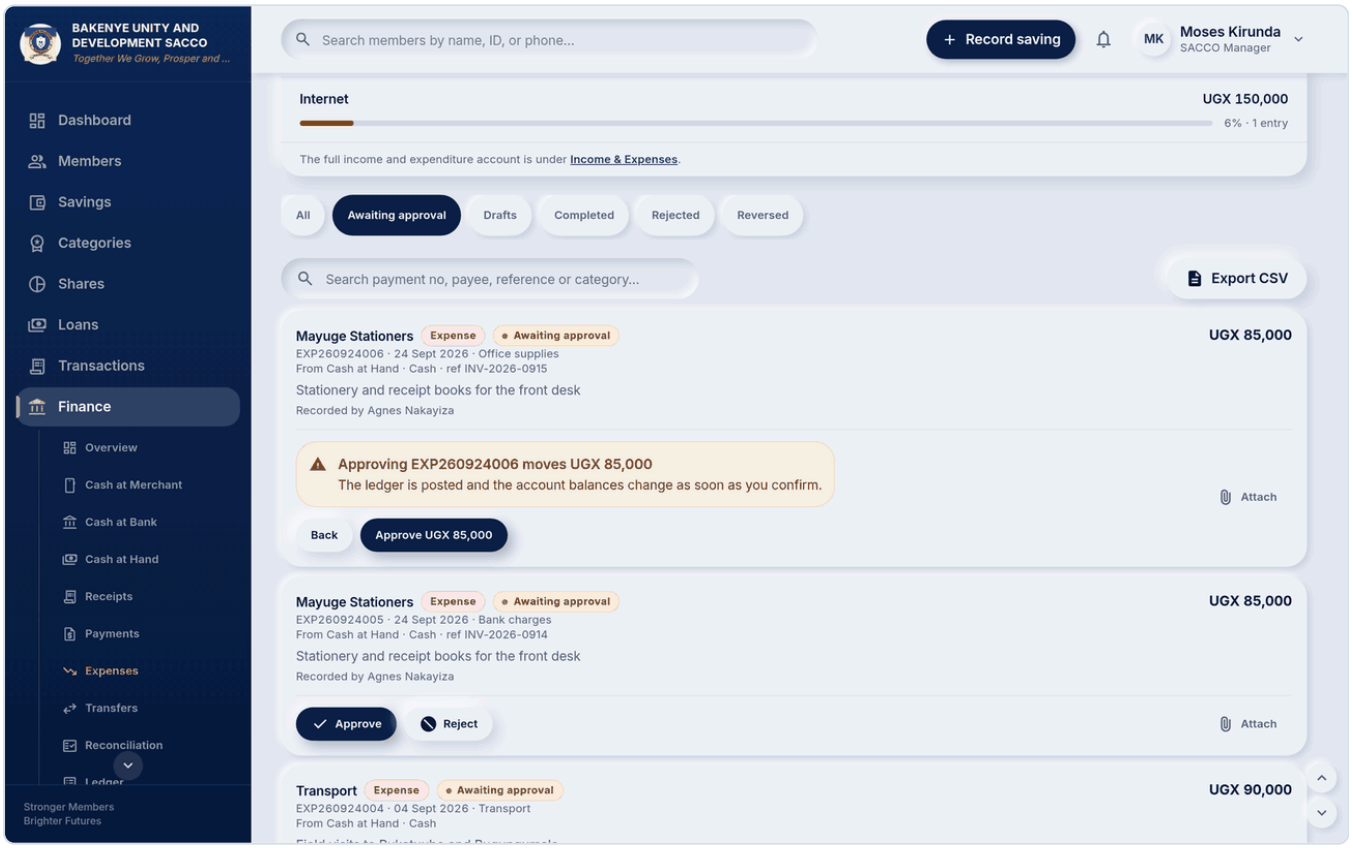

Screenshot 59. Filed for approval. No money has moved.

> **Recording an expense does not spend the money**
>
> It is filed as *Awaiting approval*. Nothing leaves the account until a manager approves it.

3 A manager approves it

Screenshot 60. The approval queue, with the month to date by category above it.

Screenshot 61. The confirmation, which states plainly what approving will do.

Expected result: the ledger is posted, the account balance falls, and the expense appears in the cashbook and the income-and-expenditure account.

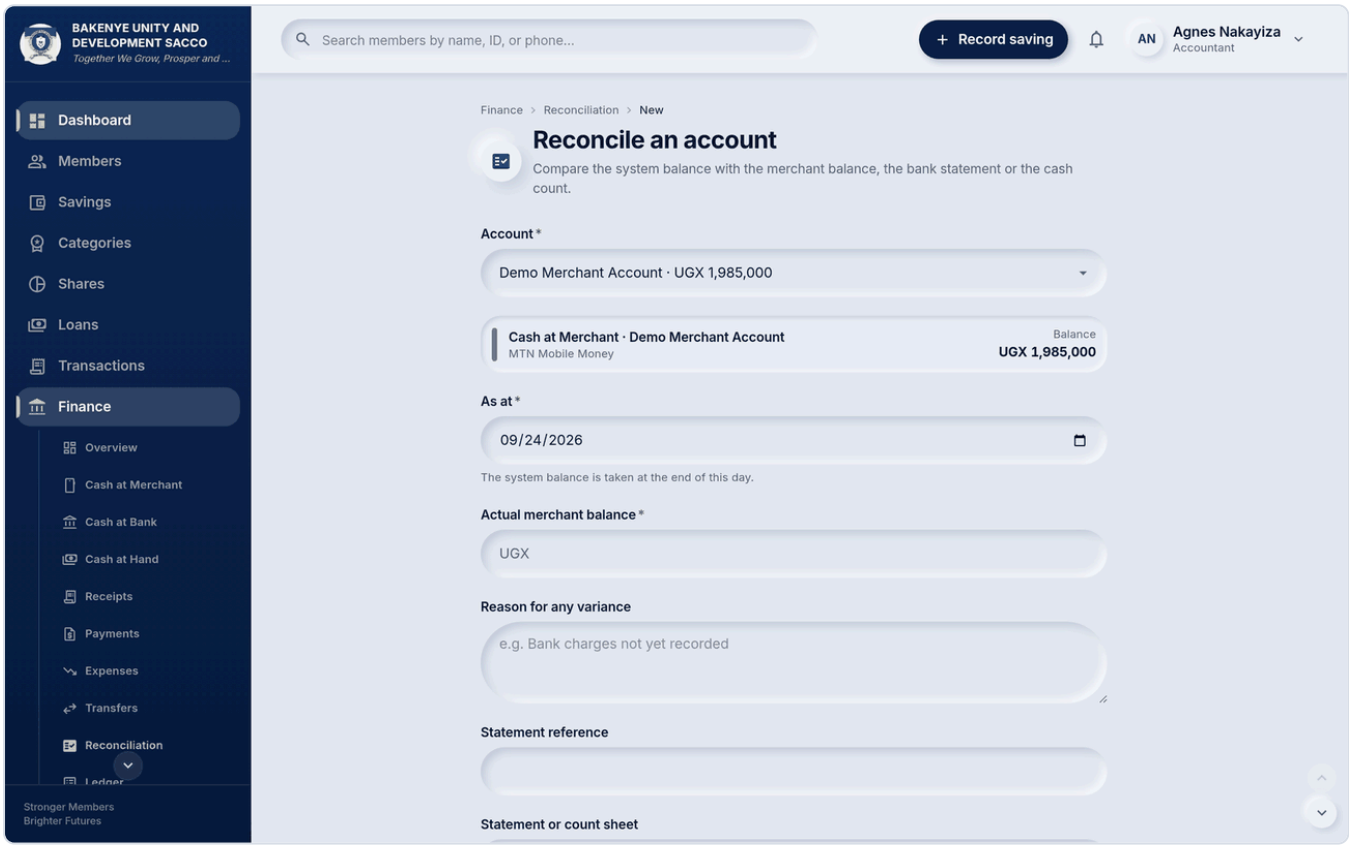

> **An expense is what the money was spent on**
>
> A bank withdrawal is not an expense — it is a transfer from Bank to Cash. The expense is what the cash is then spent on. Recording a withdrawal as an expense overstates spending and loses the cash.

Income the SACCO receives that is not a member payment — interest on the bank account, for instance — is recorded the same way under **Finance → Income**.

Reconciliation

Who may do this: Accountant · Manager · Admin · Super Admin

1 Finance → Reconciliation → Reconcile an account

Screenshot 62. The reconciliation form.

Account (required)
Cash at Merchant, Cash at Bank or Cash at Hand.

Date (required)
The date the count or statement relates to. The system works out its own balance **as at that date**, not as at this moment.

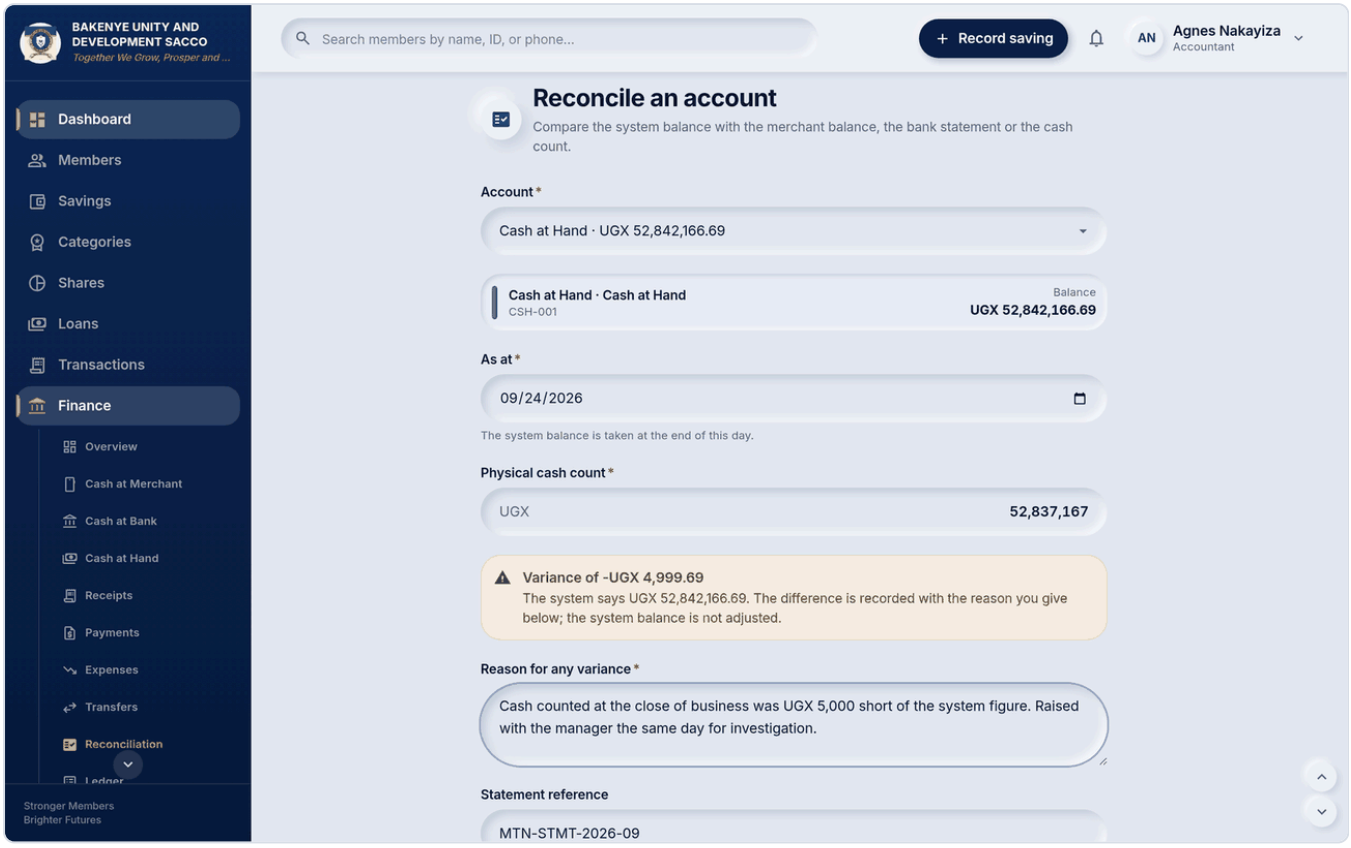

Actual balance (required)
What is really there: the wallet, the bank statement, or the cash you counted.

Statement reference
The statement or count sheet you are working from.

Reason

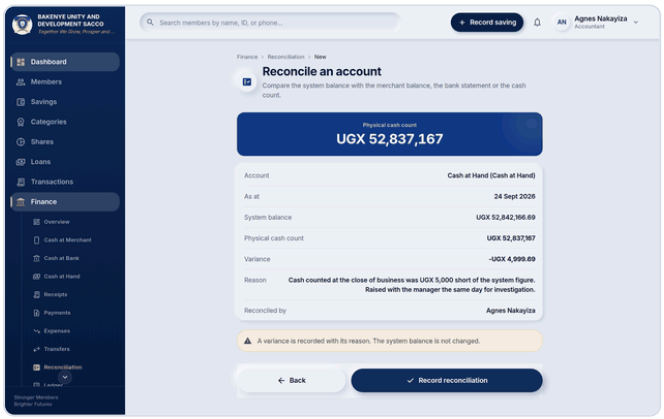

Required if there is a difference.

2 Enter what is really there

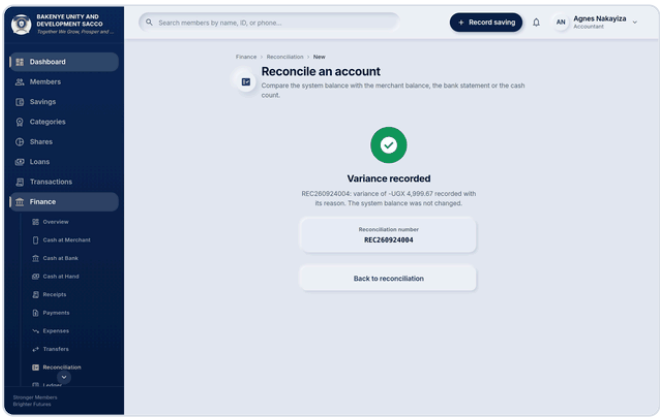

Screenshot 63. A cash count entered, with the reason for the difference.

3 Review and record

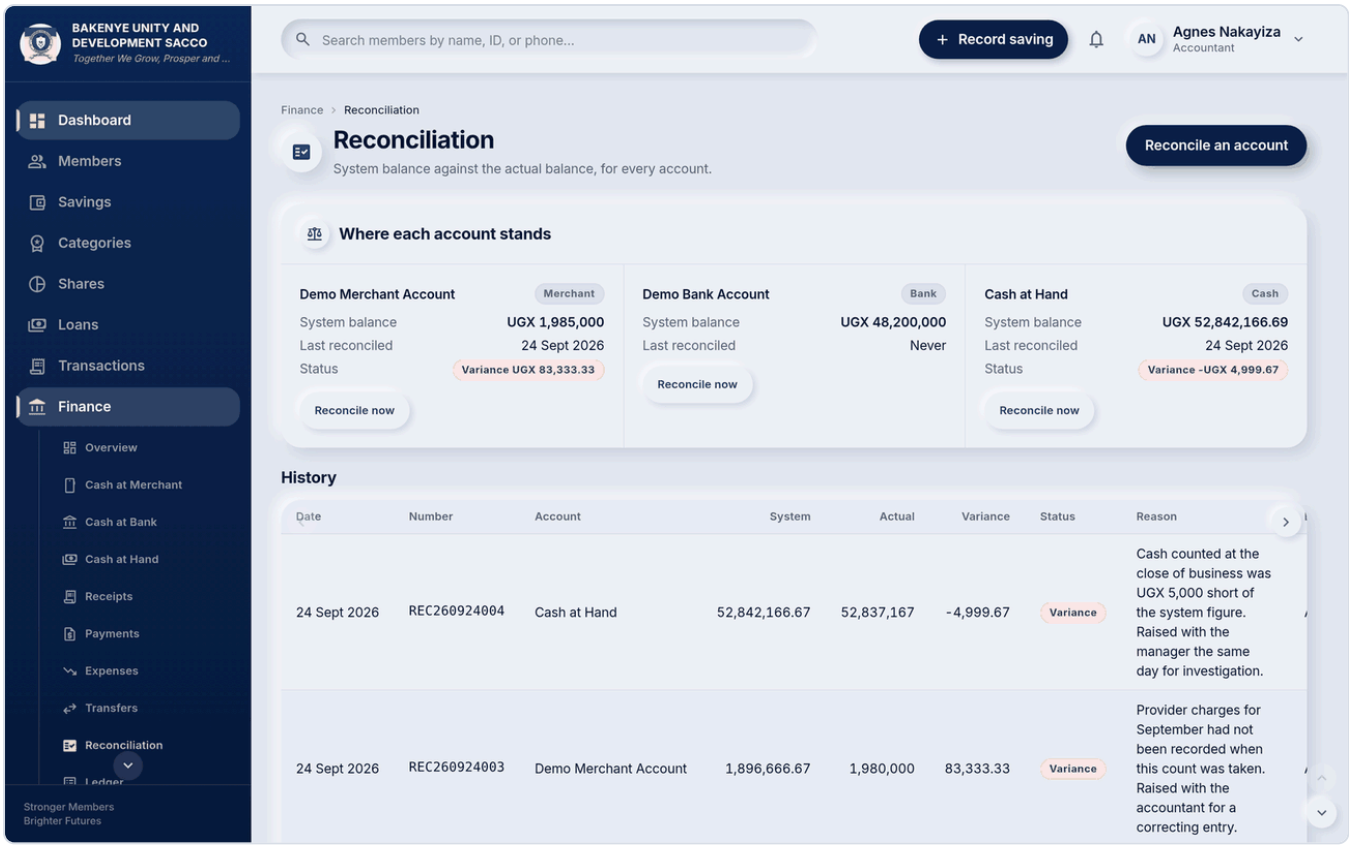

Screenshot 64. The confirmation, showing the variance before it is saved.

Screenshot 65. Recorded, with its REC reference.

Expected result: a **REC** record holding the system balance, the balance you counted, the difference and your reason. In the example above the count was UGX 4,999.67 short.

Screenshot 66. The reconciliation history for each account.

Reconciliation never changes a balance

It records what you found. A difference is investigated — a missing entry, a payment recorded twice, a bank charge nobody entered — and put right with a proper entry or a reversal. The reconciliation itself is a note, not a correction.

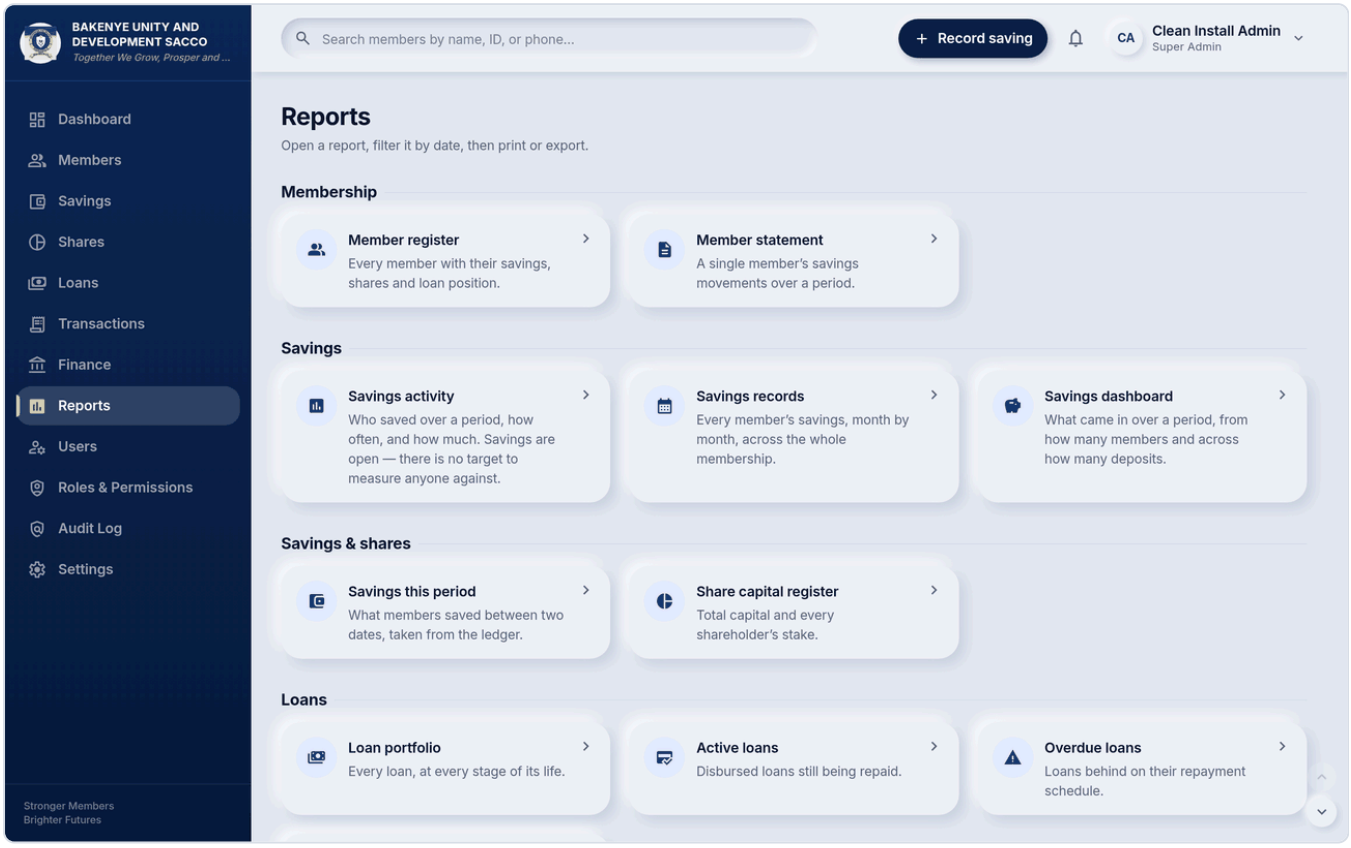

A reconciliation is worked out as at the date you give it

The system balance it compares against is the balance *on that date*, not the balance at this moment. An entry dated after that date is correctly left out — so if a figure surprises you, check the dates on the recent entries before assuming the count is wrong.

12. Reports

Every report is produced from the ledger at the moment you open it. There are no stored totals, so a report cannot disagree with the transactions behind it.

Viewing reports: every staff role. **Member statements and member reports:** Loan Officer Accountant Field Officer Manager Admin Super Admin. **Finance reports:** roles that may view Finance.

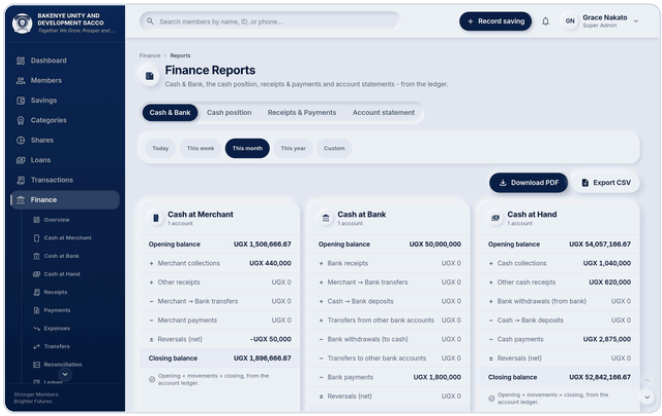

Screenshot 67. The Reports screen: every report, grouped by subject.

What is available

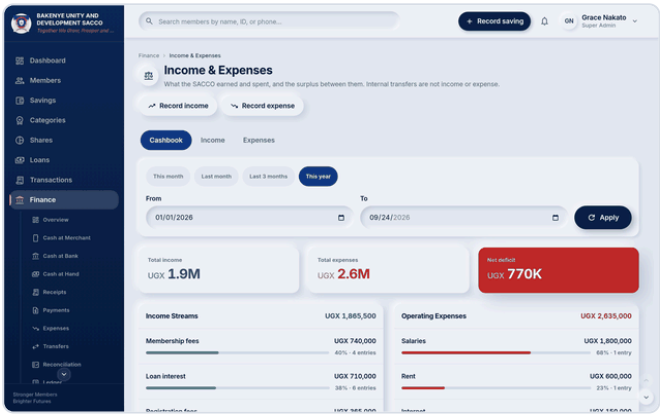

Report	What it answers	Where
Member register	Who the members are and where they stand.	Reports
Member statement	One member's savings over a period.	Reports
Member financial ledger	Every transaction for one member.	The member's page
Savings activity	Who saved over a period, how often and how much.	Savings
Savings records	Every member's savings, month by month.	Savings
Share register	Share capital held, by member.	Shares
Loan portfolio	Every loan at every stage.	Loans

Report	What it answers	Where
Overdue loans	Loans in arrears.	Loans
Loan repayments	Every repayment received.	Transactions
Cash & Bank report	Opening, movements and closing, per account.	Finance
Consolidated cash position	All accounts side by side.	Finance
Receipts & payments	Money in and out over a period.	Finance
Income & expenses	The income and expenditure account.	Finance
Profit & loss	Surplus or deficit for the year to date.	Finance
Transaction register	The complete ledger.	Transactions
Audit log	Who changed what, when and why.	Audit Log

Using a report

Screenshot 68. The Cash & Bank report.

Screenshot 69. Income and expenses for the year to date.

1. Open the report.
2. Set the **period** — today, this week, this month, this year, or dates you choose.
3. Apply any filter the report offers (category, status, account, member).
4. Read the totals at the top; they always reflect the filter you have applied.

Printing, or saving as a PDF

Press **Download PDF**, or use your browser's own print option, and choose *Save as PDF* as the destination.

BAKENYE UNITY AND DEVELOPMENT SACCO
Member savings statement

Member: Musoke John

Every figure on this document is computed from the member transaction ledger at the time of printing.
BAKENYE UNITY AND DEVELOPMENT SACCO · system-generated, valid without signature.

Screenshot 71. The member register as it prints.

The printed document carries the SACCO's crest and full registered name, what the document is, what it is about, the period, the headline totals, when it was produced and **by whom**. The menus and buttons are dropped, and a table that runs over a page repeats its headings.

Exporting to a spreadsheet

Where **Export CSV** appears, it downloads the same rows for Excel. It is a CSV file, which Excel opens directly.

Checking that a report is right

Check	How
Does the period cover what you meant?	The dates are printed on the report.
Does the total match the entries?	The report lists the entries it has totalled — count a small one through by hand.
Do two reports agree?	The Cash & Bank closing balance should equal the Finance overview for the same date.
Are reversals excluded?	Reversed entries are excluded from income and expense totals and shown separately.

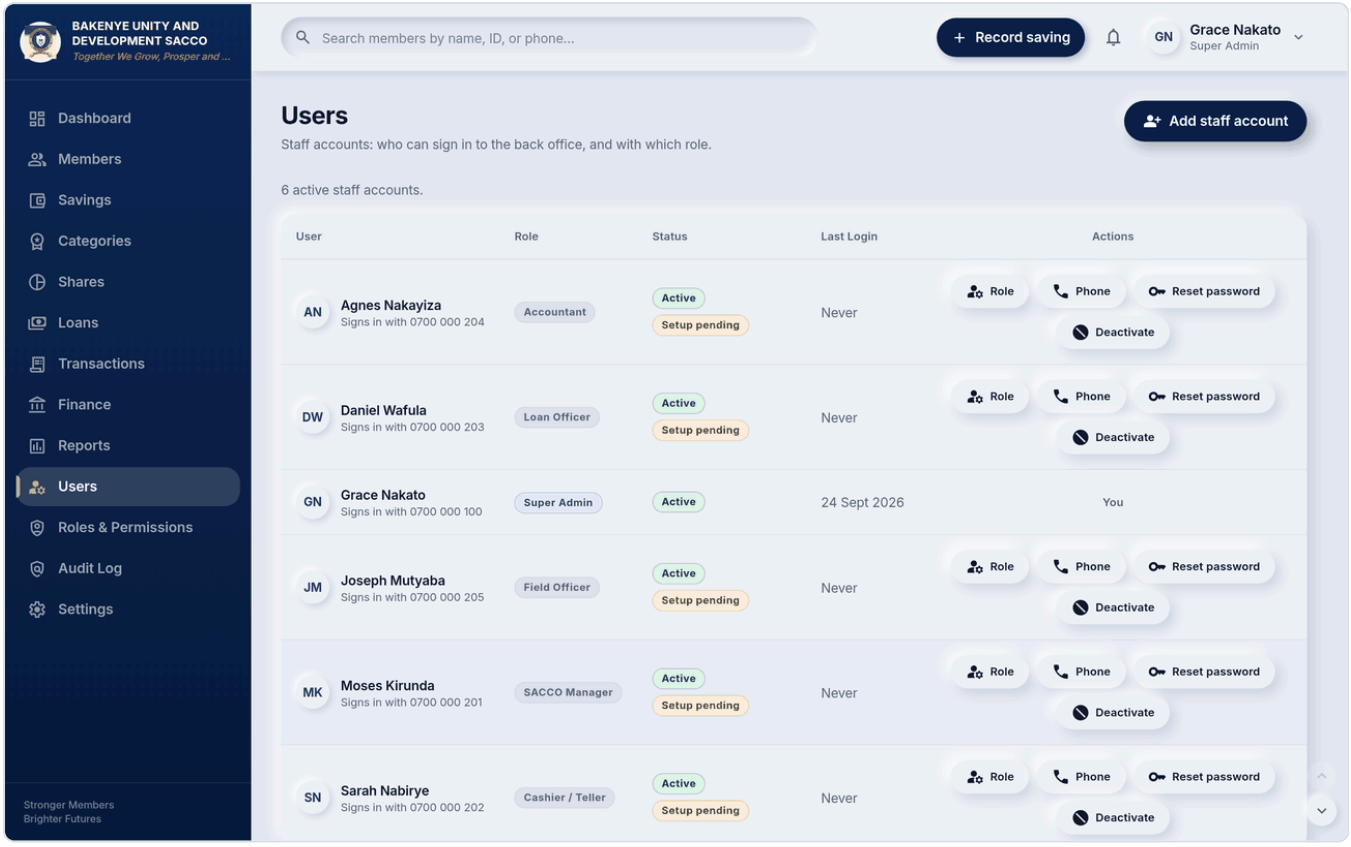

Check	How
Are transfers excluded?	A transfer between the SACCO’s own accounts is neither income nor expense and is left out of the cashbook.

> **A report cannot be corrected**
>
> If a report looks wrong, the entries behind it are wrong. Find them in the transaction register and put those right; the report will follow.

13. User management

Staff accounts, their roles, and how access is ended.

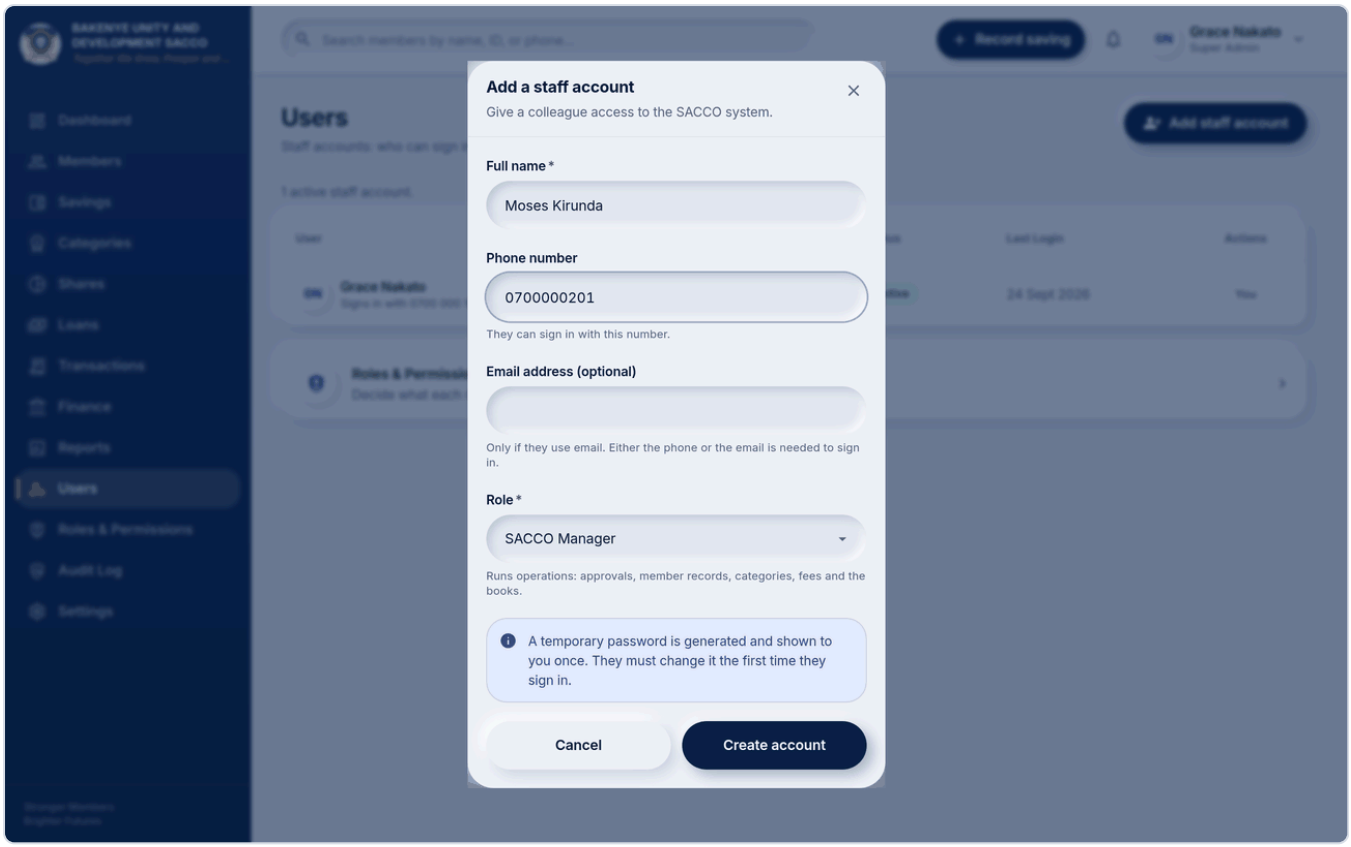

Who may do this: **Admin** **Super Admin** only. Not a SACCO Manager.

Screenshot 72. Users: every staff account, its role, status and last sign-in.

Creating a staff account

1 Users → Add staff account

Screenshot 73. The new staff account form.

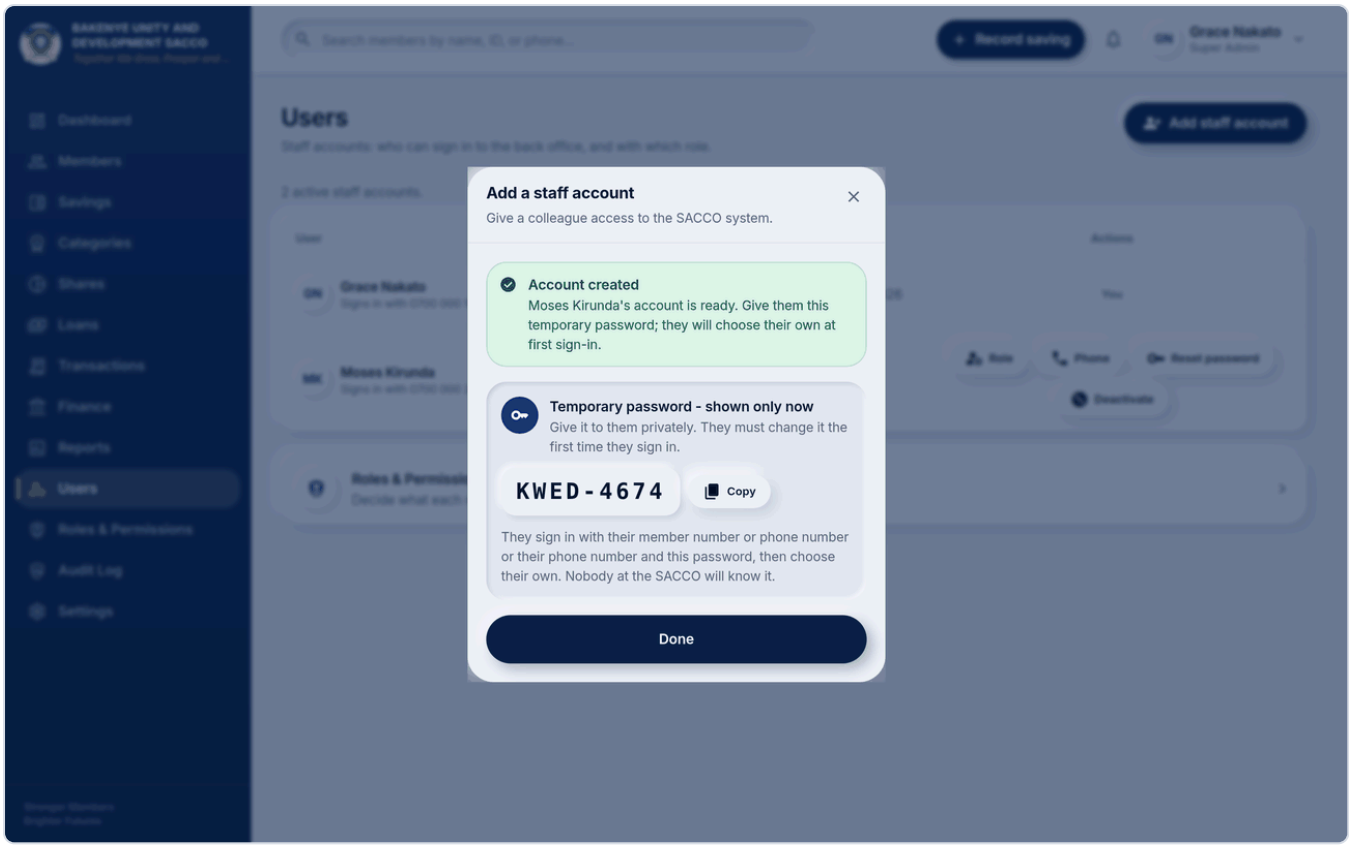

Full name (required)
The person’s real name — it appears on everything they record.

Phone number
What they will sign in with. Members of staff without an email use this.

Email address
Optional. If present, they may sign in with it and can use the emailed password reset.

Role (required)
Give the **least** access the job needs. It can be changed later.

2 Hand over the temporary password

Screenshot 74. The temporary password, shown once.

Give it to the person directly. They must replace it at their first sign-in, and until they do, the account can do nothing else.

> **Do not send a temporary password by SMS or WhatsApp to a number you have not verified**
>
> And do not write it in a shared book. It is shown once for a reason.

Changing a role

Open the account on the Users screen and change its role. It takes effect at once — including for a session already open. Every change is audited.

> **You cannot change your own role**
>
> Nobody can, including a Super Admin. Ask another Super Admin.

Ending somebody’s access

When a member of staff leaves, or changes job, **deactivate the account** on the Users screen. A deactivated account cannot sign in, and an open session stops working on its next request.

> **Deactivate, never share and never re-use**
>
> An account is a person. Everything done under it is recorded as done by that person. Never hand a leaver’s account to their replacement — create a new one and deactivate the old.

Resetting a member of staff’s password

Press **Reset password** on their account. A new temporary password is shown once, the old one stops working immediately, and they must choose a new one at their next sign-in.

Least privilege, in practice

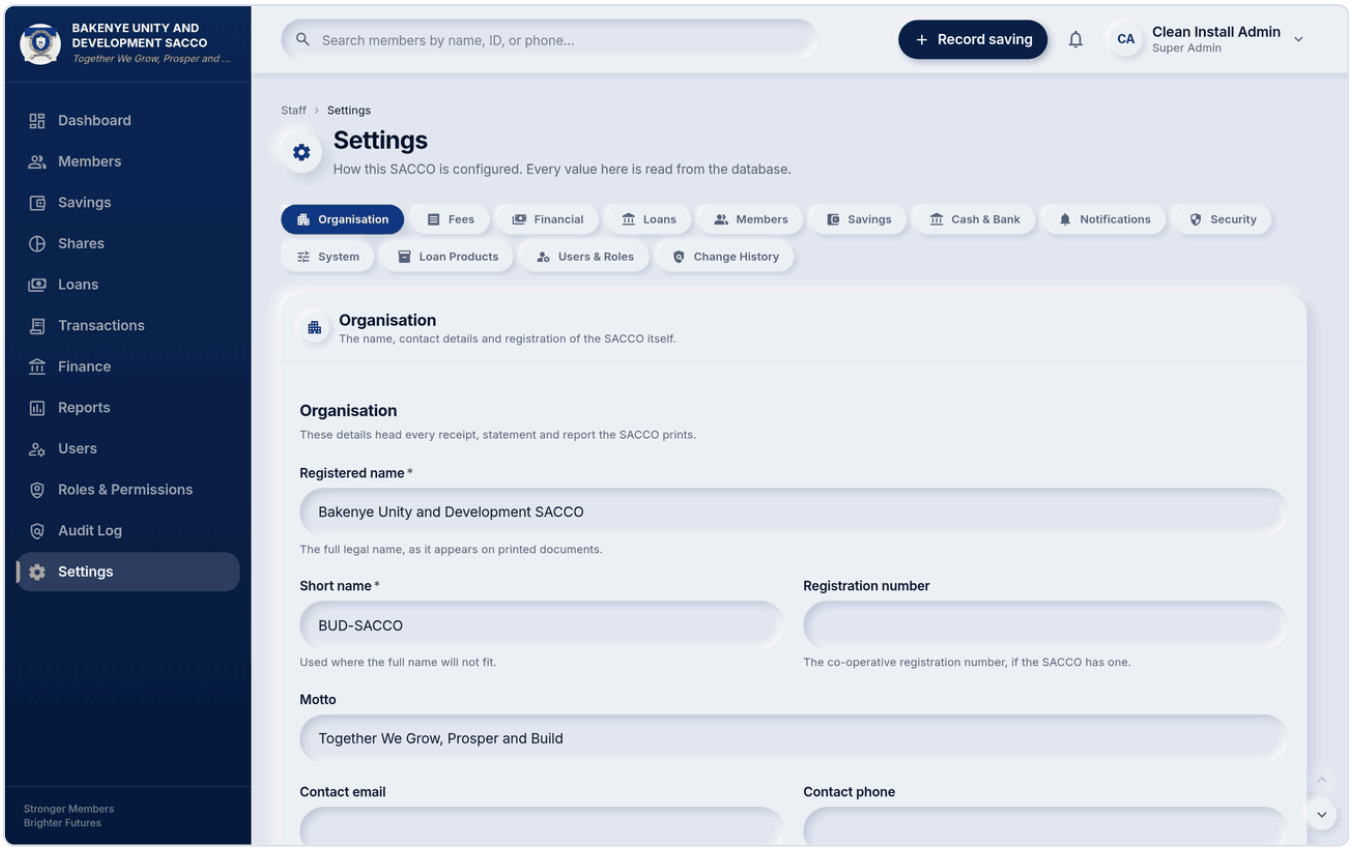

Situation	The right role
Takes money at the counter	Cashier / Teller
Collects in the field, records nothing else	Field Officer
Assesses loans, does not approve them	Loan Officer
Keeps the books, does not touch the counter	Accountant
Runs the SACCO day to day	SACCO Manager
Needs to see everything, change nothing	Viewer
Looks after staff accounts	Admin
Looks after the system itself	Super Admin — as few as possible

14. Administrator functions

Configuration, roles and oversight. These screens change how the system behaves for everybody, so they belong to a small number of people.

Settings

Who may use this: Manager Admin Super Admin

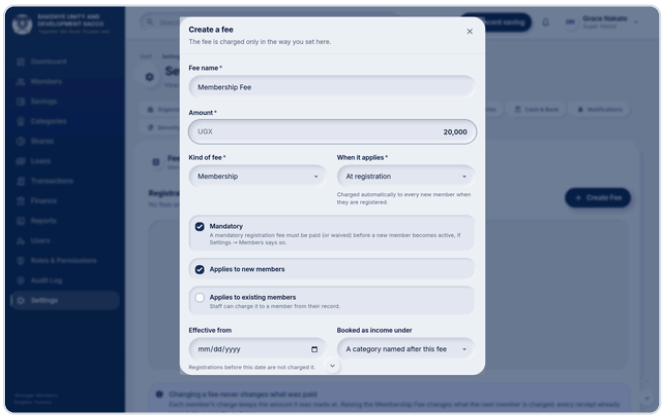

Screenshot 75. Settings, by section.

Section	What it controls
Organisation	The SACCO's name, registration, motto and contact details — what appears on receipts and letterheads.
Fees	Every fee: amount, when it applies, and whether it is mandatory.
Financial	Currency, and the smallest and largest amounts allowed.
Loans	How many loans a member may hold at once, guarantor requirements, grace periods and late penalties.
Members	Which registration fields are required, the minimum age, and whether fees must be paid before a member becomes Active.
Savings	The smallest deposit the counter will take. Savings are open: there is no target to set.

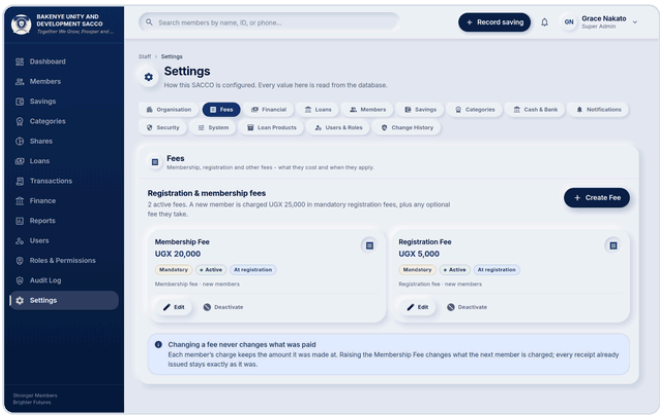

Section	What it controls
Shares	The price of one share, and the smallest number a member may hold.
Cash & Bank	Approval rules, the approval threshold, the four-eyes rule, whether an account may go below zero, and balance alerts.
Notifications	Which events notify members.
Security	Session timeout, minimum password length, failed-attempt limits and lock-out length, and whether a reversal needs a reason.
System	Receipt and statement footers.
Loan Products	The products members may borrow under.
Users & Roles	A way through to staff accounts and permissions.
Change History	Every settings change, and who made it.

> **Settings change what everybody sees, at once**
>
> Changing the minimum password length, the session timeout or the approval threshold affects every member of staff immediately. Agree the change before you make it, and note why.

Fees

Screenshot 76. Creating a fee.

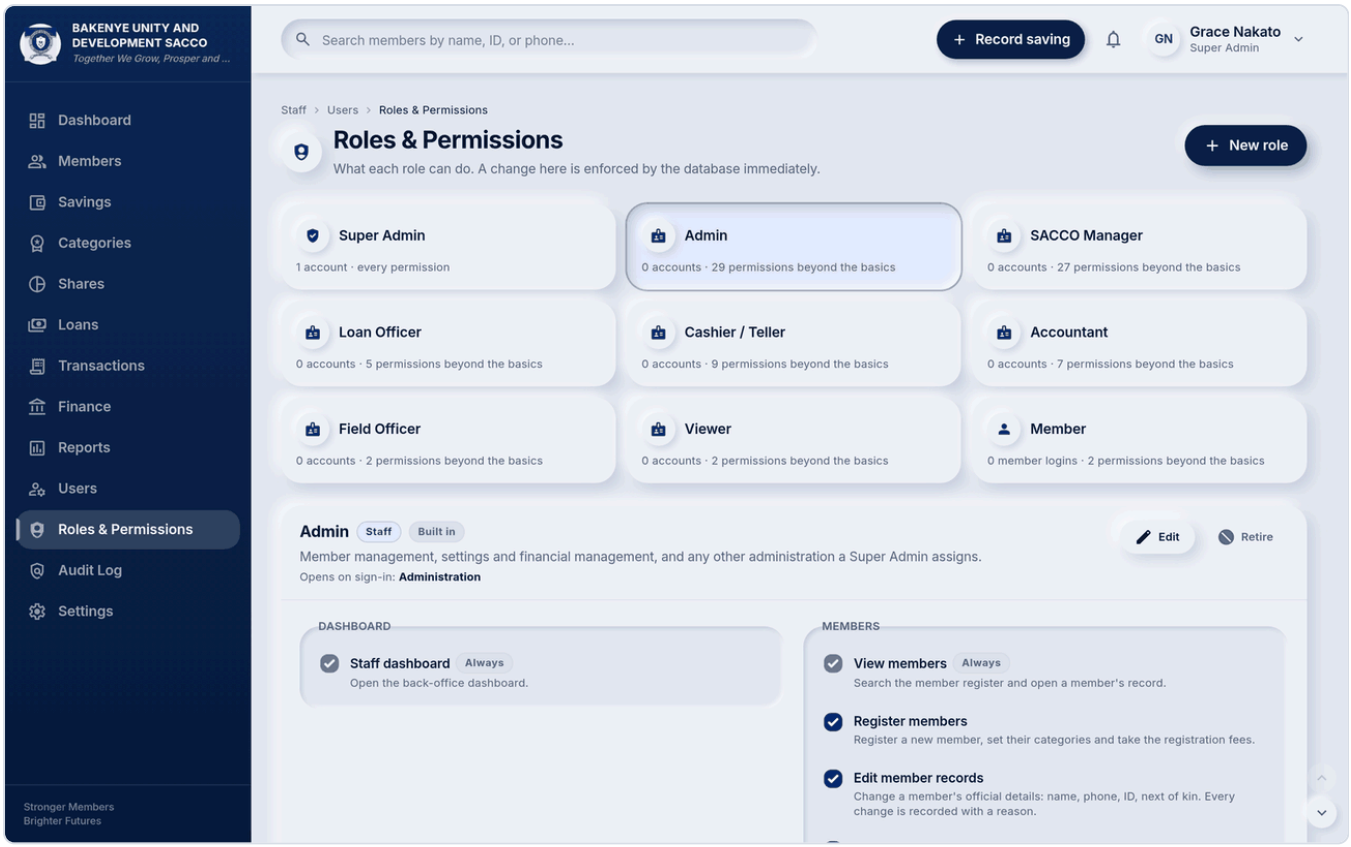

Screenshot 77. The fees in force.

- A fee is never deleted — it is made **inactive**, so history stays intact.
- Each member's charge keeps the name and amount it had when it was made, so raising a fee changes what the next member pays and nothing that has already happened.

Roles and permissions

Who may use this: **Super Admin** only.

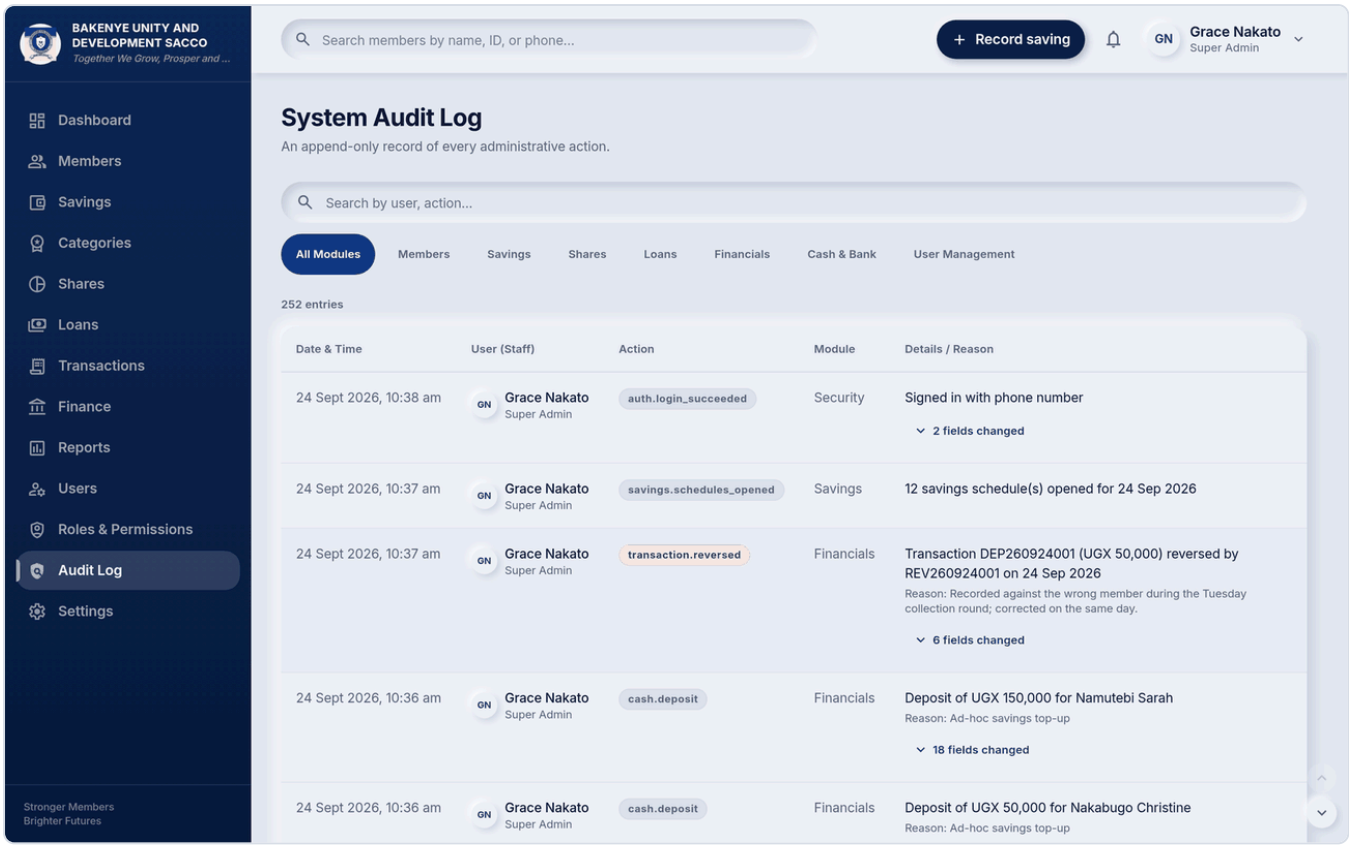

Screenshot 78. Roles & Permissions: every role, and every permission it holds.

Switching a permission off here switches it off everywhere — the menu, the screens and the database all ask the same question. A new role can be created, given permissions and told which dashboard it opens on, without any change to the software.

> **What cannot be configured away**
>
> Super Admin always holds everything. The Member role can only ever hold member-portal permissions. Only a Super Admin may grant *Manage staff accounts* or *Manage roles & permissions*. Nobody may edit their own role. Every change is audited.

The audit log

Who may view it: Accountant · Manager · Admin · Super Admin

Screenshot 79. The audit log.

Every action that matters is here: the person, the action, the module, the record, the time, and — for sensitive actions — the reason and the values before and after. Sign-ins, failed sign-ins, sign-outs, password changes and resets are all recorded too, under *Security*. The log is append-only; nobody can edit or remove an entry.

Use it to answer: who recorded this payment? who changed this member's phone number, and why? who approved this expense? who was signed in on Tuesday afternoon?

Nightly maintenance

A scheduled job runs once a night. It flags loans that have fallen into default. It is set up when the system is installed and is not something staff run.

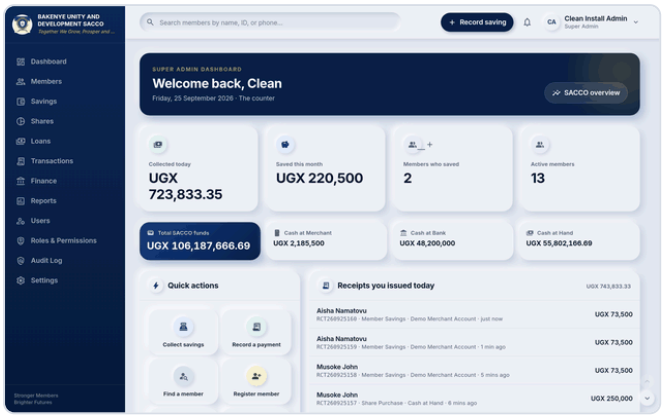

> **It no longer touches savings**
>
> The job used to open a savings schedule for every member and mark unpaid ones missed. Savings are open, so there is nothing to raise and nothing to mark: a month without a deposit is not a debt.

> **If loans are never flagged overdue**
>
> The nightly job may not be running. This is a matter for whoever supports the system, not something to work around by entering data by hand.

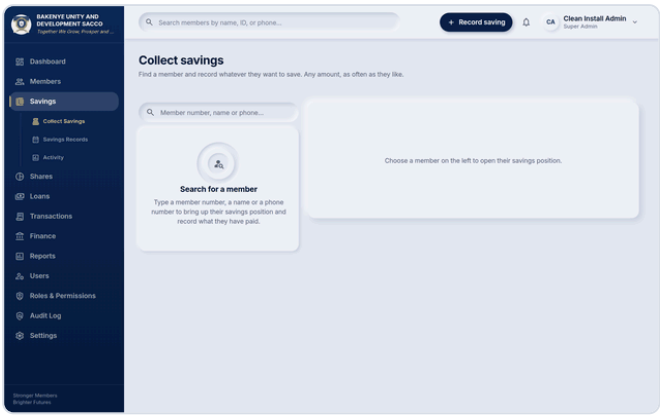

15. Role workflows at a glance

What a normal day looks like for each role, and where each task is described in full.

Cashier / Teller

Screenshot 80. The Cashier desk.

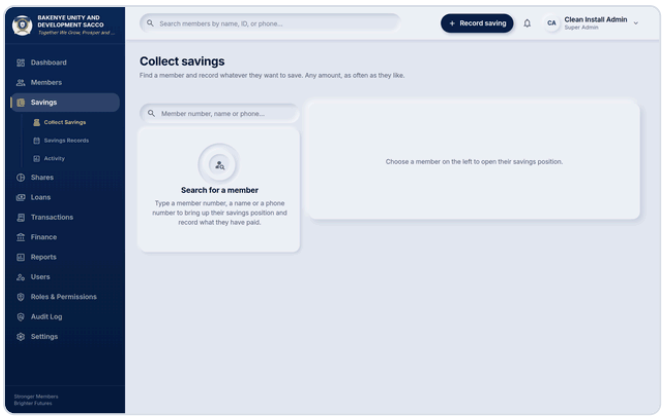

Screenshot 81. Collect Savings, as a Cashier sees it.

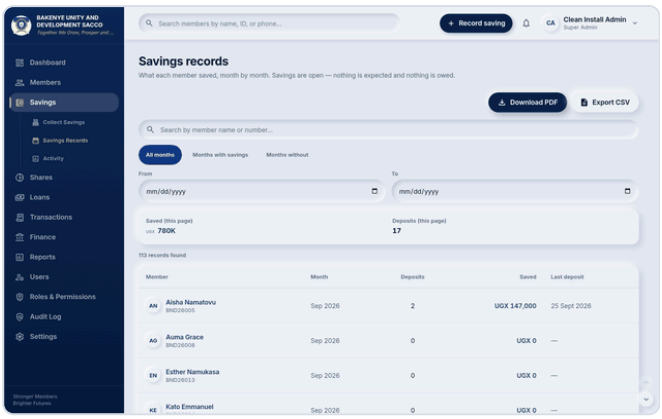

Task	Where	Section
Record a savings collection	Savings → Collect Savings	6
Record a deposit or a withdrawal	Transactions → Record Deposit	9
Sell shares	Shares → Record Share Purchase	5
Record a loan repayment	Loans → the loan → Record repayment	8
Collect a fee	The member’s page	9
Print a receipt	The transaction	10
Check today’s takings	Cashier desk	9

A Cashier cannot approve, reverse, register a member, change a record or open Settings or Users.

Field Officer

Screenshot 82. Collections, as a Field Officer sees it.

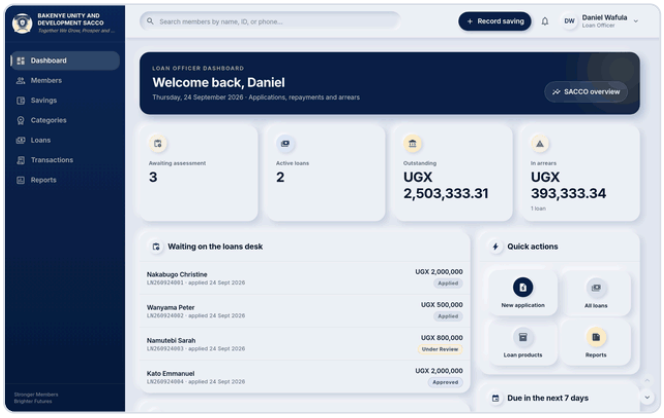

Screenshot 83. Savings records — what each member saved, month by month.

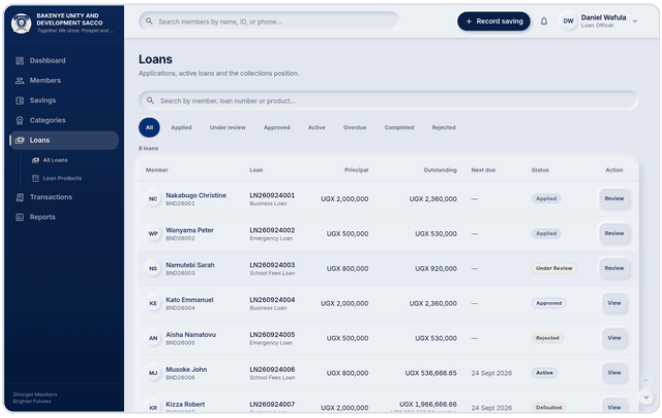

A Field Officer records savings and reads savings records, members and reports. They cannot sell shares, take loan repayments, or open Finance.

> **Recording a collection made earlier**
>
> Set the **payment date** to the day you actually received the money. Record it the same day you return, not later.

Loan Officer

Screenshot 84. The Loans desk.

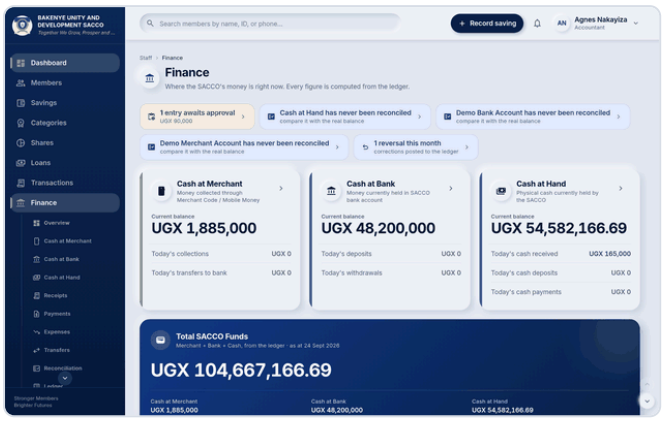

Screenshot 85. The loan portfolio.

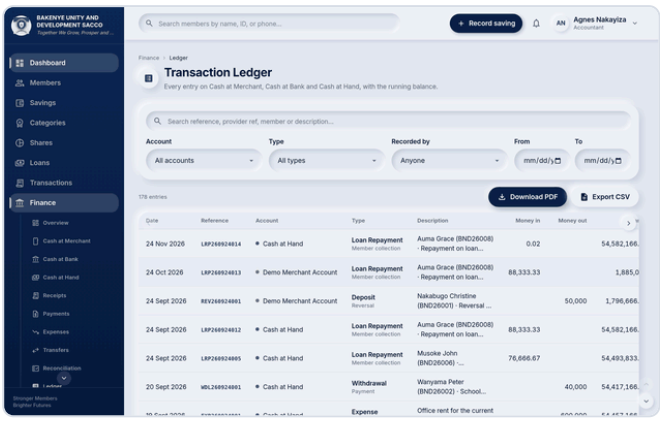

Task	Where	Section
Capture an application	Loans → New Loan Application	8
Assess an application	Loans desk → the application → Start review	8
Manage guarantors	The loan	8
Record a repayment	The loan → Record repayment	8
Work the arrears list	Loans, filtered by Overdue	8

A Loan Officer **cannot approve or disburse** a loan — that is deliberate, so that the person who assesses is not the person who decides. They also cannot open Finance.

Accountant

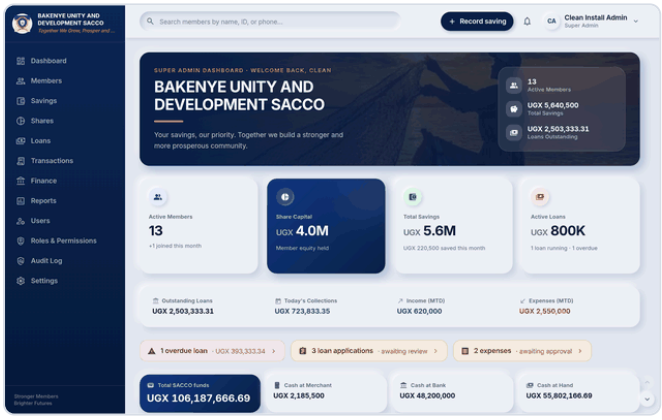

Screenshot 86. Finance, as an Accountant sees it.

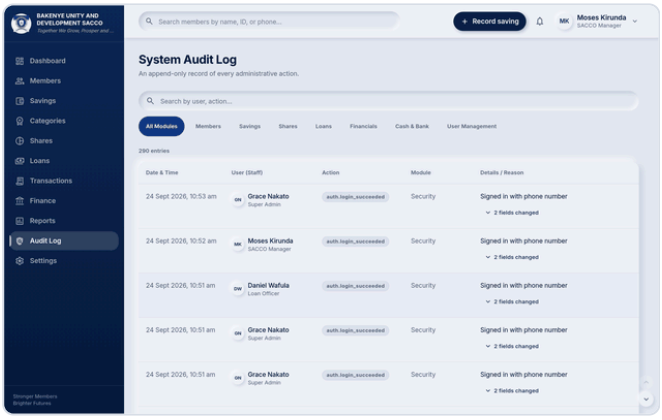

Screenshot 87. The transaction ledger.

An Accountant records income and expenses, reconciles accounts, reads every report and the audit log. They cannot approve their own entries, take money at the counter, or register members.

SACCO Manager

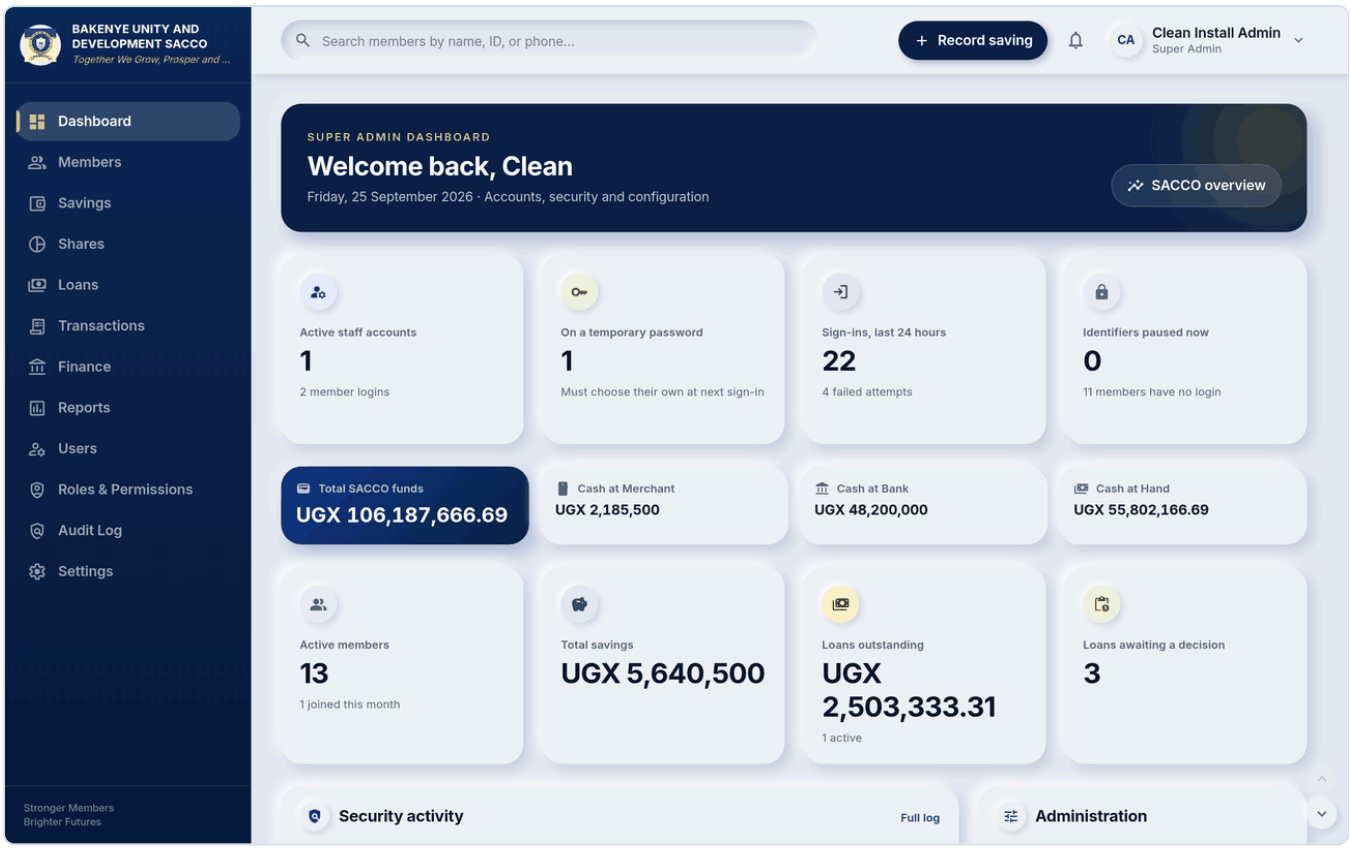

Screenshot 88. The SACCO overview.

Screenshot 89. The audit log.

A Manager does everything above, and in addition: registers members, edits records and statuses, manages categories and fees, approves and disburses loans, approves expenses and transfers, reverses transactions, and changes Settings. A Manager **cannot** manage staff accounts or roles.

Admin and Super Admin

Screenshot 90. The Administration dashboard.

An Admin adds everything a Manager can do plus staff accounts. A Super Admin adds Roles & Permissions and always holds every permission.

16. Keeping the records accurate

The system enforces what a computer can enforce. These are the habits that cover the rest.

Before you record anything

Do	Why
Identify the member by their **member number**, and read the name back.	Names repeat; numbers do not.
Count the money before you type a figure.	Type what you received, not what was expected.
For mobile money or bank, read the reference from the confirmation message.	It is what lets the payment be matched at reconciliation, and it cannot be used twice.
Check the date if the money was received earlier.	The entry should be dated when the money arrived, not when you got to a computer.
Read the confirmation summary.	It is the last moment before the record becomes permanent.

After you record it

Do	Why
Check the result screen names the right member and the right amount.	Catching it now is far easier than catching it at month end.
Give the member their receipt.	It is their evidence, and yours.
If it is wrong, report it the same day.	A reversal on the day is routine; a reversal a month later is an investigation.

Avoiding duplicates

- Do not press a confirm button twice because the screen is slow. The system is built to record a double press once, but the habit is a bad one.
- Before recording a payment a member says they already made, **search for it**. The reference from their confirmation message will find it.
- The same mobile-money or bank reference cannot be recorded twice on the same account. If the system refuses a reference, the payment is probably already recorded — find it.

What the system does not check

> **The system cannot know**
>
> whether the money in front of you is real; whether the member who paid is the member you selected; whether the reference you typed is the reference on the message; or whether a transfer you recorded actually happened at the bank. Those are yours.

Supporting records

Keep the paper: mobile-money confirmations, bank slips, supplier invoices, manual receipt books used in the field. The system holds the reference; your file holds the evidence behind it. An auditor will ask for both.

Escalating

Situation	Who to tell	When
Money recorded against the wrong member	Your supervisor or the Manager	Same day
An amount recorded wrongly	Your supervisor or the Manager	Same day
A reconciliation difference you cannot explain	The Accountant and the Manager	Same day
A member disputes a balance	Your supervisor	At once, with the member present
Cash on hand does not match the system	The Manager	Before you leave
You suspect misuse of an account	The Manager or a Super Admin	At once
A system error stops you finishing something	The Manager, and whoever supports the system	At once, with a note of what you were doing

17. Troubleshooting

Problem	Likely cause	What to do
A menu item I need is missing.	Your role does not hold that permission.	Ask your manager. Roles are changed on Users → Roles & Permissions by a Super Admin.
I opened a link and was sent back to my dashboard.	Same — the route is not open to your role.	Not a fault. Ask your manager if you genuinely need it.
A member cannot be found.	Spelling, or the wrong number; or the member is archived.	Search by phone number instead, and clear any status filter. If still nothing, they may not be registered.
A transaction I recorded is not in the list.	The filter, not the record.	Clear the date and type filters, or search by the reference from the receipt.
This reference has already been used.	That mobile-money or bank reference is already recorded on that account.	Search for it. The payment is almost certainly already in the system — do not record it again.
A loan balance does not look right.	A repayment missing, or one recorded against the wrong loan.	Open the loan and read its repayment history against the member's receipts.
This member already has a loan in progress.	The one-loan-at-a-time rule.	Complete or close the existing loan first. The limit is a setting management controls.
A form will not submit and a field is red.	A required field, or a value outside the allowed range.	Read the message under the field; it names what is wrong.
Payment of UGX … exceeds the outstanding balance.	Usually the repayment quick-fill defect (see below).	Read the amount in the box. Type the correct figure.
Reversing a savings payment fails with a system error.	**A known defect.**	Do not attempt a correcting entry of your own. Note the reference, the member and the amount, and report it to the Manager and to system support.
An expense was approved but the balance has not changed.	Looking at the wrong account, or the wrong period.	Check which account it was paid from, and the report's date range.
A report will not load.	Too wide a date range, or a slow connection.	Narrow the period and try again.
I cannot sign in.	Wrong password; or too many attempts; or the account is deactivated.	Wait out the pause, then try once. If it still fails, an Admin must reset the password.
I was signed out while working.	The session timed out after a period of inactivity.	Sign in again. Nothing you had already confirmed is lost; anything you had only typed is.

Defects reported in version 1.0, and now corrected

The review that produced version 1.0 of this manual found two defects in the working system. Both have since been corrected and re-tested. They are listed here so that anyone still working from the earlier edition knows the workarounds it printed are no longer needed.

#	What used to happen	What happens now
1	Reversing a *savings* transaction failed with a system error and nothing was changed.	A savings transaction reverses like any other. The savings cycle is put back to paid, part paid or pending, worked out again from the payments that remain.
2	On the repayment screen, the *One installment* and *Full balance* shortcuts entered an amount one hundred times too large whenever the installment was not a whole number of shillings.	The shortcuts fill in the correct amount, cents included. Read the figure against the money in front of you, as you would with any amount.

> **Still check the confirmation summary**
>
> These corrections change what the system fills in for you. They do not change your own responsibility to read the confirmation summary — the member, the amount and the date — before you confirm anything.

18. Security and responsible administration

Rule	Why
Your account is yours alone. Never share your password, and never let somebody work under your session.	Everything recorded under your account is recorded as done by you.
Sign out before you leave the counter.	Locking the screen is not enough if somebody else can reach the keyboard.
Never ask a member for their password.	You do not need it, and no member of staff ever should. Reset it instead.
Check identity before creating or resetting a login.	A National ID, every time. That password opens everything about that member's money.
Give the least access the job needs.	Fewer people able to do a thing means fewer ways for it to go wrong.
Deactivate leavers the day they leave.	An account nobody is using is an account nobody is watching.
Treat member information as confidential.	Balances, phone numbers and National IDs are not to be discussed outside the work they are needed for.
Protect what you export.	A downloaded report or a screenshot has no permissions on it. Do not send one over WhatsApp, and delete it when you are done.
Report anything odd.	An entry nobody recognises, a sign-in at an impossible hour, a balance that will not reconcile — the audit log is there to be used.

What the system does, and does not, protect against

The system does	The system does not
Stop a posted transaction being edited or deleted, by anybody	Know whether the money you were handed was real
Hide and block screens a role may not use	Stop somebody using a colleague's open session
Pause sign-in after repeated failures	Stop somebody who has genuinely been told a password
Refuse a duplicate payment reference on an account	Notice two different entries for the same money
Record who did what, when, and why	Read that record for you — somebody has to look
Sign an idle session out	Replace signing out yourself

19. Frequently asked questions

A member says they paid by mobile money but their balance has not changed. Why?

Because the payment has not been recorded. The system is not connected to any mobile-money provider. Ask for the confirmation message, search the reference, and if it really is not there, record it with that reference and the date it was received.

Can I edit a transaction I recorded with the wrong amount?

No — nobody can. A Manager, Admin or Super Admin reverses it with a reason, and then the correct entry is recorded. See Section 10.

Why can I see Finance but not record anything there?

Viewing and recording are separate permissions. Ask your manager.

A member wants to change their phone number.

An Admin or Manager edits their record, on sight of the National ID, giving a reason. The change is kept field by field under History on the member's page.

Can a member be deleted?

No. Set their status to Inactive or Archived, with a reason. Their record and transactions stay.

Why does a new member show as Pending?

Because mandatory fees have not been paid, and management has set *Mandatory fees must be paid before a member is active*. They become Active automatically when the fees are paid or waived.

What is the difference between a withdrawal and an expense?

A bank withdrawal moves the SACCO's own money from Bank to Cash — a transfer. An expense is what that cash is then spent on. Recording a withdrawal as an expense overstates spending and loses the cash.

Why does my expense say "Awaiting approval"?

Because expenses are approved before the money moves. A Manager, Admin or Super Admin approves it.

Two members have the same phone number. What now?

Only an Admin or Super Admin, holding *Allow a shared phone number*, can authorise it, and a reason is recorded. In most cases it means one of the numbers is wrong — check first.

A member has saved nothing for months. Is the system wrong?

No. Savings are open: a member saves what they choose, when they choose, and a month without a deposit is not a debt. There is nothing to chase and nothing to correct.

How do I find out who recorded a particular payment?

Open the transaction — it names who recorded it — or search the audit log by the reference.

A member says the SACCO has lost their money.

Take it seriously and work from evidence: ask for the confirmation message or receipt, search the reference in the transaction register, and check their member ledger. Involve your manager early. Never promise a correction you are not authorised to make.

20. Appendix

Glossary

Term	Meaning
Arrears	Money due and not paid.
Audit log	The permanent record of who did what, when and why.
Cash at Bank / Merchant / Hand	The SACCO's three kinds of account.
Disbursement	Handing a loan over to the member.
Four eyes	A rule under which a second person approves an entry.
Guarantor	A member who stands for another member's loan.
Idempotency	Recording the same submission twice produces one entry.
Ledger	The single, permanent list of every money movement.
Permission	One thing a role is allowed to do.
Reconciliation	Comparing what the system says an account holds with what it really holds.
Reversal	A correcting entry that cancels an earlier one. Both remain.
Role	A named set of permissions given to a member of staff.
Open savings	The rule that a member saves any amount they choose, as often as they choose, with no monthly target.
Savings record	One member in one month, holding what they saved in it. It records what came in; it never says what should have.
Share price	What one share costs — the same for every member.
Temporary password	A one-time password issued by the office, which the holder must replace at their first sign-in.
Transfer	Money moved between the SACCO's own accounts. Neither income nor expense.
Waiver	A manager excusing an unpaid fee, with a written reason. Savings waivers were retired with the savings targets; the months already waived are kept.

Reference prefixes

Prefix	Document
SAV	Savings

Prefix	Document
SHR	Shares
LRP	Loan repayment
LDS	Loan disbursement
LN	Loan account
RCT	Receipt
PAY	Payment
EXP	Expense
INC	Income
TRF	Transfer
DEP	Bank deposit
WDL	Bank withdrawal
FEE	Fee
PEN	Penalty
REV	Reversal
REC	Reconciliation

Member numbers take the form **BND** + the two-digit year of registration + that year's sequence — BND26006 is the sixth member registered in 2026. The sequence starts again at 001 each January. A member number is issued once and can never be changed.

Daily and periodic checks

When	Who	What
End of each day	Cashier	Count the cash box and compare it with Cash at Hand. Report any difference before leaving.
End of each day	Cashier	Check today’s collections on the Cashier desk against your receipt book.
Weekly	Loan Officer	Work the overdue loans list.
Weekly	Manager	Review the savings activity report to see what members are saving.
At least monthly	Accountant	Reconcile Cash at Merchant, Cash at Bank and Cash at Hand.
Monthly	Manager	Review the income and expenditure account, and the approval queue.

When	Who	What
Monthly	Admin	Review the Users list — deactivate anybody who has left.
Quarterly	Manager / Super Admin	Review Roles & Permissions against who does what.

Where to find things

I want to…	Go to
Record a savings payment	Savings → Collect Savings
Register a member	Members → Register Member
Give a member a portal login	The member's page → Create login
Reset a member's password	The member's page → Reset password
Sell shares	Shares → Record Share Purchase
Capture a loan application	Loans → New Loan Application
Approve or disburse a loan	Loans → the loan
Record a repayment	Loans → the loan → Record repayment
Record an expense	Finance → Expenses → Record expense
Approve an expense	Finance → Expenses → Awaiting approval
Move money between accounts	Finance → Transfers
Reconcile an account	Finance → Reconciliation
Print a member statement	Reports → Member Statement
Reverse a transaction	Transactions → the transaction → Reverse
Add a member of staff	Users → Add staff account
Change what a role may do	Users → Roles & Permissions
Change a fee	Settings → Fees
See who did something	Audit Log

Revision history

Version	Date	Change
1.0	25 September 2026	First issue, following a full review of the working system.

Version	Date	Change
1.1	25 September 2026	Reissued after the defects found by that review were corrected in the system.
